The Folly of Girls.

A thousand times the old story, which had such a tragical illustration recently, has been told through the press and whispered in society, and still the lesson is not learned. A young lady, just out of the school-room, is fascinated by the attentions of a man of the world, and nothing can persuade her that he is not the noblest, the bravest, the best of lovers. What does she know, poor thing, of the secret lives of these gallant gentlemen? She reads the legend of excess and evil courses, written on the bleared eye, and tremulous lips, and she cannot understand it. She hears a whisper, perhaps, of scandalous prodigality and excess, and she shuts her little ears and loves her hero all the better as the victim of detraction. She knows nothing of his previous history, nothing of his daily occupations, nothing of his associates. She little imagines that his soft compliments conceal a cruel temper, and the hand that presses h rs so tenderly is a brutal hand, fit only for deeds of violence. That he is a gambler and a drunkard, false, quarrelsome, idle, selfish and sensual; that he is at war with his parents and a tyrant in the company of others, she might learn if she would exercise as much caution in choosing a husband, as in choosing a bonnet.

The girl triumphs, of course, over father and mother. Those who really love her follow the wedding festivities with aching hearts, and watch the future with sorrowful apprehension. The inevitable sequel is not long delayed. For a few short weeks life is a dream of soft sentiment and new gowns. Then the truth begins to dawn upon the poor little heart. She has sold herself for a passing fancy. Neglect is soon followed by angry words and contemptuous looks and brutal jests. Her jewels are sold to buy bread, and he steals the money to spend it for drink. There is a hideous bruise on the white neck of which he used to say such pretty things. She shudders at the footsteps for which she once listened with rapture. She hides herself in terror from the face on which she thought she could gaze forever. Sometimes, with the courage which seems to be given only to certain women, she holds a proud and smiling face to the world, hides the brutalities of her master, covers up her hardships, dissembles hunger, and no one knows, except the husband, when she rests at last from her sorrows, that the brave heart was broken in the first months of the marriage. Sometimes the sad story ends in that common curse and punishment of American marriages, a legal separation, and sometimes in the one catastrophe which is worse than divorce—in murder.—*New York Times.*

THE IMPROVEMENTS IN THE MICROSCOPE have been gradual. Singularly each step in improvement has led to changes in the theory of microscopic physiology, and yet it has, in some cases, been found afterward that the same facts could be observed almost or quite as well with the older form and arrrangement of lenses. Quite recently the introduction of a system of lenses with short focal distances, one sixteenth of an inch and less, has led to the discovery that human saliva is filled with flat, nearly transparent, irregular corpuscles.

IN the first twelve days of April the earnings of the Union Pacific railroad increased $281,000

Historical Sketch of Keystone Lodge.

EDITORS WATCHMAN:—Thinking that it may interest a few of your readers, I will give a short sketch of the birth and growth of Keystone Lodge, No. 64, A. O. U. W.

Anyone who might have been in the vicinity of Seventh and Market streets, Oakland, on the evening of Nov. 13, 1878, might have seen a small group of men, 14 in number, consisting of A. T. Dewey, H. M. Van Arman, H. Morton, W. N. Glenn, J. F. O'Beirne, H. W. McCotter, Dr. Jas. B. Williams, F. A. Olney, L. S. Silverberg, Rob't Gay, Chas. E. Alden, Chas. E. Lufkin, N. P. Vallejo and Jas. Gordon. A close observer could have noticed a slight nervousness on the part of each or every one of the above gentlemen, a few hurried words and a general start for the upper regions of Vinzent block, and, following this band a few steps, see them enter the office of Dr. J. B. Williams. If allowed to follow still further, they would have seen the cause of the mysterious movements of this body of men. As it was, they remained in ignorance until the following morning, when it was announced that the 64th Lodge of the Ancient Order of United Workmen had been instituted the previous evening, in the office of Dr. J. B. Williams.

And to show the good taste of these members, they called themselves Keystone Lodge, No. 64, and had elected the following officers: P. M. W., H. M. Van Arman; M. W., A. T. Dewey; F., C. E. Lufkin; O., N. P. Vallejo; Recorder, Charles E. Alden; Financier, W. N. Glenn; Receiver, Robert Gay; G., L. Silberberg; I. W., H. W. McCotter; O. W., F. A. Olney. It was decided that the future home of this Lodge should be in the small Odd Fellows' hall, corner of Eleventh and Franklin streets. Let us stop a minute and see what was said in regard to the future prospects of this young Lodge. Old members of this noble fraternity came to the writer, and informed him that it was impossible for this Lodge to survive, as there were six other Lodges in the city of Oakland, and that they had taken within their fold all the material there was in this beautiful city, and that this Lodge had nothing but barren fields to work upon. I must confess that we were somewhat discouraged; but we went to work with a will, and now let us see as to the truth of these prophesies. On November 19th, our second meeting, we initiated five candidates; on November 26th, two candidates; on December 3d, eleven; on December 10th, ten. Our increase became so marked that we were compelled to seek larger quarters, and selected Camron hall, on Fourteenth street, near Broadway, for our meeting-house or Lodge-room. At our first meeting in this hall we had four candidates; our next meeting, thirteen—thereby closing our charter, December 27, 1878, with 61 charter members. We have since taken in 85 members, making a grand total to date of 146 members. But one death has occurred among our number, Bro. A. Stollberg having passed away Nov. 16, 1879. The following Bros. were elected officers for the term commencing July 1, 1879: P. M. W., A. T. Dewey: M. W., N. P. Vallejo; F., P. H. McGrew; O, Wm. M. McCloud; Rdr. Chas. E Alden; Fin., Geo. H. Muler; Rvr., J. J. White; G., W. R. Capell; I. W., J. Smith; O. W., D. Scanlan. The following were elected for the term commencing Jan. 1, 1880: P. M. W., P. H. McGrew; M. W., Wm. M. McCloud; F., Chas. E. Alden; O., J. W. Dodge; Rdr, L. Silverberg; Fin., J. C. Plunkett; Rvr., J. J. White; G., Geo. Schade; I. W., J. Smith; O. W, O. Trenschel. For the term commencing July 1, 1880, the following were elected: P. M. W., Wm. M. McCloud; M. W., Chas. E. Alden; O., F. M. Cary; Rdr, A. Fine; Fin., Wm. Kilpatrick; Rvr., J. J. White; G., Robert Gay; I. W., J. Smith; O. W., O. E. Trenschel. For the term commencing Jan. 1, 1881, the following were elected: P. M.W., Chas. E. Alden; M.W., J. C. Plunkett; F., F. M. Cary; O., J. W. Nelson; Rdr, Chas. E. Alden; Fin., Wm. Kilpatrick; Rvr., J. J. White; G.,Robert Gay; I.W., J. Smith; O.W., Gerge Atkinson. The following, commencing July 1,1881: P. M. W., J.C. Plunkett; M. W., F. M. Cary; F., J. W. Nelson; O., H. Menges; Rdr., Chas. E. Alden; Fin., Geo. A. Schade; Rvr., J. J. White; G., J. N. Rooney; I. W., J. Smith; O. W., H. T. Jenkins. For the term commencing Jan. 1, 1882: P. M. W., F. M. Cary; M. W., J. W. Nelson; F., H. Menges; O., Wm. Kilpatrick; Rdr., Chas. E. Alden; Fin., P. Schroeder; Rvr., Wm. Lane; G., M. Hyland; I. W., J. Alvaie; O. W., J. F. Schottler. P. M. W., Bro. H. M. Van Arman, was elected our representative to the Grand Lodge of 1879. P. M. W., A. T. Dewey elected to Grand Lodge, 1880. P. M. W., Wm. M. McCloud and Chas. E. Alden, 1881. P. M. W. Chas E. Alden and A. T. Dewey, 1882.

One member of our Lodge is here worthy of mention—Bro. Chas. E. Alden—having held office since the Lodge was instituted, and never missed from his post but one night, being confined to his bed by sickness, and as a reward for his faithfulness, has been appointed D. D. G. M. W. for this district. This Lodge has given four public entertainments, two being literary and musical and two anniversary balls. We have, during our existence, relieved 20 sick and distressed brothers, paying them in the neighborhood of $12,000. We have, during the same period, collected and paid to the Grand Recorder, on account of beneficiary assessments, the sum of $4 837. We have, so far this year, paid from our general fund, two of our beneficiary assessments of $1 each; also the Supreme Lodge relief call of 50 cents for each member. We are now engaged in getting up an entertainment for the benefit of Bro. Dr. J. B. Williams, who has been confined to his bed for nearly a year, and during that time had the misfortune of losing his wife and child.

We have placed the price of admission at the small sum of 25 cents. The entertainment will take place at Independent Church, corner of Thirteenth and Jefferson streets, on Friday, May 5, 1882.

With kind regards to you and your paper, I remain, yours in C. H. and P.

OAKLAND.

Workmen's Guarantee Fund Association.

This association has taken a strong hold on the members of the A. O. U. W., and Sec'y Reading, at his office, No. 41 St. Ann's building, is hourly engaged in the management of its affairs. The successful growth of the association is proof of its economical management, as well as the care taken in the admission of members.

The association has been organized more than two years, has issued over 1,600 certificates, and in that time it has had but 12 deaths, thereby costing, including the annual dues of $2, only $8 per year to each membership for an insurance of $1,000.

This association is managed exclusively for the benefit of members of the A. O. U. W., and those who join it secure to their families an additional $1,000 to the $2,000 already pledged. Members of the Order who want more insurance than the usual beneficiary certificate, can take it in this form without joining other orders.

FROM a private letter from Bro. H. P. Cramer, we learn that a new Lodge of Workmen will be formed at Victoria, British Columbia, with over 100 charter members.

THERE will be a large delegation of Workmen from several of the city Lodges who will visit Pacific, No. 7, on Thursday evening, May 4th.

MEMORIAL, No. 174, will give a grand musical and literary entertainment on their second anniversary, Monday evening, June 12th. From what we have learned we are warranted in saying that this will be a pleasant social and reunion. A number of our leading professionals will assist. The entertainment will be held in Fraternity hall, Shiel's building.

BROTHER WORKMEN may rest assured that the money expended for the picnic excursion will mainly go to replenish the Relief Fund. Favorable arrangements have been made with the S. P. R. R., and the largest portion of each fare will help to swell the Relief Fund.

REPRESENTATIVES of the Big Oak Flat road and stage line, came into Yosemite valley last week. They report a belt of snow some 9 miles wide and from 7 to 12 ft. deep; but, fortunately, they were provided with snow-shoes for their horses, and met with neither trouble nor delay. These snow-shoes are 9 by 13 inches, made of ash plank a full inch in thickness, in the center of which is an iron band, and which is firmly fastened by screws across the foot of the horse. This holds the foot firmly to the board. The horse acquires a sort of side gait to his feet, so that one shoe passes the other very readily. In no place did the horse snow-shoe sink over four inches, while men without snow-shoes sunk in the soft snow to their knees. This experiment is a great success, and the superintendent says that he can now bring tourists to Yosemite at any season of the year and over any depth of snow.

BRO. J. E. ROOT has associated himself with the firm of Mowry & Co., No. 103 and 104 California market, as wholesale and retail dealers in poultry, game, butter and eggs. From personal knowledge we know this firm keeps the best in the market, and recommend them as reliable men and square dealers.

F. A. KIMBALL, of National City, San Diego county, has forwarded information to the Immigration Bureau that there is every probability of the formation of a county association for San Diego. A party of English capitalists, now in China, have sent word that they intend to locate in this State some time in November next.

OUR genial brother, D. J. Levy, with E. Friedlander, 761 Market street, opposite Phelan's building, is an artistic cutter and guarantees a fit. As merchant tailors, they are a leading and reliable house, and are deservedly entitled to the large patronage they receive from the city and country.

EVERY MEMBER of the A. O. U. W. should subscribe for their paper, the PACIFIC STATES WATCHMAN, at $2 a year. It has recently been improved with better paper, and more and even more vigorous matter.—*Russian River Flag.*

The Order in Alameda County.

Alameda County has, next to San Francisco, the largest membership of any county in the State. It was the first place where a Lodge of the A. O. U. W. was organized on this coast. Grand Recorder Pratt organized the first 10 Lodges in this State, and all but Nos. 4, 8 and 9 of these were in Alameda county. The first Lodge—California, No. 1—was organized Aug. 21, 1875, at West Oakland. The Order is in a very flourishing condition in Alameda county, and the memberships of most of the Lodges are increasing.

The present Deputies in the county are: District No. 1, F. F. Schultz; No. 2, Chas. E. Alden; No. 3, A. S. Cheminant; No. 4, Thomas Hand; No. 5, Israel Horton.

The aggregate membership of the Lodges in the county is 1,823. These figures represent the Master Workmen in good standing, although here are really more than appear, as there are always some temporarily suspended.

We append a brief record of each Lodge in Alameda county.

California, No. 1., was organized at West Oakland Aug. 21, 1875. It has a membership of 115. Geo. Berdan is M. W. and W. H. Wilkinson is Recorder. The Lodge meets every Tuesday.

Oakland, No. 2, was organized in Oakland June 10, 1876, and now has a membership of 248. P. White is M. W. and S. H. Mitchell is Recorder. The Lodge meets at A. O. U. W. hall, Oakland, every Friday.

Brooklyn, No. 3, was organized Sept. 29, 1876, at Brooklyn, and now has a membership of 89. C. H. Townsend is M. W. and Geo. Chase, Rdr. The meetings are at Odd Fellows' hall, Brooklyn, Thursdays.

Alameda, No. 5, was organized July 19, 1877, and now has a membership of 57. J. Alex. Forbes is M. W. and C. H. Haile, Recorder. Meetings on Wednesdays at Odd Fellows' hall, Alameda.

Occidental, No. 6, was organized July 20, 1877, and has now a membership of 159. R. Stephens is M. W. and W. G. Hawkett is Recorder. Meetings, Fridays, at Kohler's hall, West Oakland.

Pacific, No. 7, Oakland, was organized July 24, 1877, and now has 192 members. A. W. Palmer is M. W. and C. W. Baker, Recorder. Meets on Thursdays, corner of Twelfth and Franklin streets.

Berkeley, No. 10, Berkeley, was organized Oct. 23, 1877. R. G. Huston is M. W. and F. H. Payne, Recorder. Meets Fridays.

Temple, No. 11, North Temescal, was organized Dec. 4, 1877. O. R. Morgan is M. W. and R. B. Nixson, Recorder. Meets on Mondays.

San Leandro, No. 12, was organized Dec. 10, 1877. Henry Motz is M. W. and S. W. Johnson, Rdr. Meets on Fridays, at San Leandro, and has 46 members.

Haywards, No. 18, was organized Jan. 19, 1878, and has 56 members. S. S. Cunningham is M. W. and F. M. Dallam, Recorder. Meets on Tuesdays, at Good Templars' hall, Haywards.

Oak Leaf, No. 35, was organized June 3, 1878, and now has 220 members. W. J. Wilkinson is M. W. and M. D. Baker, Recorder. Meets Mondays, at Twelfth and Franklin streets, Oakland.

Mission, No. 56, was organized at Mission San Jose, Sept. 27, 1878, and now has 78 members. H. Friermuth is M. W. and E. F. Calkin, Recorder. Meets Saturdays.

Hearts of Oak, No. 61, was organized Oct. 25, 1878, and now has 40 members. F. E. Corder is M. W. and A. Fleming, Recorder. Meets Wednesdays at West Berkeley.

Industry, No. 63, was organized Nov. 2, 1878, and now has 40 members. H. Detjens is M. W. and A. Hewett, Recorder. Meets Thursdays at Pleasanton.

Keystone, No. 64, was organized Nov. 13, 1878, and now numbers 110 members. J. W. Nelson is M. W. and C. E. Alden, Recorder. Meets Tuesdays at 1015 Clay street, Oakland.

University, No. 88, was organized March 22, 1879, and now has 30 members. G. A. Embury is M. W. and J. J. Wright, Recorder. Meets Saturdays at Berkeley.

Reliance, No. 93, was organized April 15, 1879, and now has 28 members. W. T. Ralph is M. W. and E. A. Anderson, Recorder. Meets on Tuesdays at Alvarado.

Ashler, No. 165, was organized March 24, 1880, and now has 69 members. J. W. Hand is M. W. and A. Cheminant, Recorder. Meets Tuesdays at Alameda.

West Eend, No. 175, was organized June 21, 1882, and now has a membership of 45. Samuel Orb is M. W. and H. C. Ballheimer, Recorder. Meets Mondays at Holtz's hall, Alameda.

Eden, No. 204, was organized Oct. 15, 1881, and now has 56 members. James McCoy is M. W. and Henry Dopman, Recorder. Meets Saturdays at San Lorenzo.

BRO. G. M. WOOD, 120 Post street, makes a specialty of Lodge seals and engraving. As an old reliable and experienced house in this line it stands at the head. A large portion of the seals made for Workmen Lodges are made by this firm.

Major Jones' Courtship.

"Crismus eve I put on my new suit, and shaved my face as slick as a smoothin' iron, and after tea went over to old Miss Stallinses. As soon as I went into the parlor whar they was all sittin' round the fire, Miss Carline and Miss Kesiah both laughed right out.

"'There! there!' ses they, 'I told you so, I know'd it would be Joseph.'

"'What's I done, Miss Carline,' ses I.

"'You come under little sister's chicken bone, and I do believe she know'd you was comin' when she put it over the door.'

"'No, I didn't—I didn't no such thing, now,' ses Miss Mary, and her face blushed red all over.

"'Oh, you needn't deny it,' ses Miss Kesiah, 'you belong to Joseph now, jest as sure as there's any charm in chicken bones.'

"I know'd that was a first-rate chance to say something, but the dear little creeter looked so sorry and kep' blushing so I couldn't say nothin' zactly to the pint; so I tuck a chair and reched up, and tuck down the bone and put it in my pocket.

"'What are you going to do with that old chicken bone, now, Majer?' ses Miss Mary.

"I'm gwine to keep it as long as I live', ses I, 'as a Crismus present from the handsomest gall in Georgia.'

"When I sed that, she blushed worse and worse.

"'Ain't you ashamed, Majer?' ses she.

"'Now you ought to give her a Crismus gift, Joseph, to keep all her life,' ses Miss Carline.

"'Ah,' ses old Miss Stallins, 'when I was a gal like you, child, I used to hang up my stockins' and get 'em full of presents.'

"The galls kep' laughin' and blushin'.

"'Never mind,' ses Miss Mary, 'Majer's got to give me a Christmas gift—won't you, Majer?'

"'Oh, yes,' ses I; 'you know I promised you one.'

"'But I didn't mean *that*,' ses she.

"'I've got one for you, what I want you to keep all your life; but it would take a two-bushel bag to hold it,' ses I.

"'Oh, that's the kind,' ses she.

"'But you promise to keep it as long as you live?' ses I.

"'Certainly I will, Majer.'

"'Now, you hear that, Miss Carline,' ses I. 'She ses she'll keep it all her life.'

"'Yes, I will,' ses Miss Mary; 'but what is it?'

"'Never mind,' ses I; you hang up a bag big enough to hold it, and you'll find out what it is, when you see it in the mornin'.'

"Miss Carline winked at Miss Kesiah, and then whispered to her—then they both laughed and looked at me as mischievous as they could. They 'spicioned something.

"'You'll be shore to give it to me, now, if I hang up a bag?' sez Miss Mary.

"'And promise to keep it?' sez I.

"'Well, I will, 'cause I know that you wouldn't give me nothin' that wasn't worth keepin'.'

"They all agreed they would hang up a bag for me to put Miss Mary's Christmas present in, on the back porch, and about 10 o'clock I told 'em good evening and went home.

"I sot up till midnight, and when they were all gone to bed I went softly into the back gate, and went up to the porch, and thar, shore enough, was a great big meal bag hangin' to the jice. It was monsterous unhandy to get to it, but I was 'termined not to back out. So I got some chairs on top of a bench, and got hold of the rope and let myself down into the bag; but, just as I was gettin' in, it swung agin the chairs, and down they went with a terrible racket; but nobody didn't wake up but Miss Stallinses old cur dog, and he come rippin' and tearin' through the yard like rath, and round and round he went, trying to find what was the matter. I scrooched down in the bag, and didn't breathe louder nor a kitten, for fear he'd find me out, and after a while he quit barkin. The wind began to blow 'bominable cold, and the old bag kep' turnin' round and swingin', so as to make me seasick as the mischief. I was afraid to move for fear the rope would break and let me fall, and thar I sot with my teeth rattlin' like I had an ager. It seemed like it would never come daylight; and I do believe if I didn't love Miss Mary so powerful I would froze to death, for my heart was the only spot that felt warm, and it didn't beat more'n two licks a minute; only when I thought how she would be surprised in the mornin', and then it went into a canter.

"Bimeby the old dog come upon the porch, and began to smell about the bag, and then he barked like he thought he treed something. 'Bow! wow! wow!' ses he. Then he'd smell agin, and try to get up to the bag. 'Git out!' ses I, very low, for fear the gals mout hear me. 'Bow! wow!' ses he. 'Be gone! you 'bominable fool!' ses I, and felt all over in spots, for I spected every minit he'd nip me, and what made it worse, I didn't know wharabouts he'd take hold. 'Bow! wow! wow!' Then I tried coaxin'. 'Come here, good fellow,' ses I, and whistled a little to him, but it wasn't no use. Thar he stood and kept up his everlasting whinin' an' barkin' all night. I couldn't tell when daylight was breakin' only by the chickens crowin', and I was monstrous glad to hear 'em, for if I'd had to stay thar one hour more, I don't beleeve I'd ever got out of that bag alive.

"Old Miss Stallins come out first, and as soon as she seed the bag, ses she:

"'What upon yearth has Joseph went and put in that bag for Mary? I lay it's a yearlin'

or some live animal, or Bruin wouldn't bark so at it.'

"She went in to call the galls, and I sot thar, shiverin' all over so I couldn't hardly speak if I tried to—but I didn't say nothin'. Bimeby they all come runnin' out on the porch.

"'My goodness! what is it?' ses Miss Mary.

"'Oh, it's alive,' ses Miss Kesiah; 'I seed it move.'

"'Call Cato, an' make him cut the rope,' ses Miss Carline, 'an' let's see what it is. Come here, Cato, and get this bag down.'

"'Don't hurt it for the world,' ses Miss Mary.

"Cato untied the rope that was round the jice and let the bag down easy on the floor, and I tumbled out, all covered with corn meal from head to foot.

"'Goodness gracious!' ses Miss Mary, 'if it ain't the Major himself.'

"'Yes,' ses I, 'and you know you promised to keep my Crismus present as long as you lived.'

"The galls laughed themselves almost to death, and went to brushin' off the meal as fast as they could, saying they was gwine to hang that bag up every Crismus till they got husbands, too."

BRO. ROBERT THOMPSON has invented and patented a seamless boot that has advantages in an economic view, as also in comfort and durability over any other yet made. The letters patent were issued Feb. 21, 1882, and the boot is styled, "The Lion Seamless Boot." We offer our worthy Bro. Thompson congratulations, as it seems as though he had found the philosopher's stone in boot-making. There can be no ripping, chafing or cramping by side seams. Having so many advantages—being neater, stronger and more comfortable—it may be pronounced the "acme of perfection," and will entitle the inventor to a place among the inventive geniuses of this advanced age in improvements. We understand that a number of our leading manufactories are paying royalties for using his valuable patent.

THE North Pacific Coast railroad, under the new management, has become one of the popular routes for the traveling public. The roadbed, which is one of the best in the State, has been put in thorough repair, rolling stock replenished, steamers repainted, an able corps of officers selected, and a new impetus given to this section of our State. This road passes through a rich country the entire way, with scenery the grandest and climate equal to any in the world, the city of San Rafael, the southern terminus, being known as the Sanitarium of the Pacific coast. Tourists, travelers and excursion parties or campers will be furnished with accommodations and special rates during the current year. The new time table, commencing April 23, makes six trips daily on week days and five on Sundays, from San Francisco to San Rafael and Saucelito, so arranged that our business men can make their summer residences in San Rafael and Saucelito.

SOAP.—The Alta Soap company manufacture all kinds of toilet and domestic soaps of the best quality. The Engwer Borax soap has a reputation second to no other soap, and families who have used it once prefer it to any other kind, as it has a peculiar faculty of removing grease from flannels and leaving them bright and soft. —*Rural Press.*

Bros. Weintraub & Engwer are genial and enterprising men, and their excellent soaps are growing more and more popular.

THE new commission house at the corner of Washington and Front, Messrs. J. W. Gale and Wm. F. Mitchell, has favorable facilities for handling California and Oregon produce. Young, active men, with business experience and ample capital, we believe we are warranted in recommending this firm as entitled to their share of patronage. Bro. J. W. Gale was formerly one of the firm of Gale & Co., cor. Davis and Washington. Liberal advances made on consignments, and prompt returns made.

MR. G. W. HILDRETH has opened a Quaker Dairy for ladies and gentlemen at No. 10 Montgomery St., opposite the Lick house. This new establishment is finely equipped, polite waiters, kept clean and the appointments are in every respect the best in this city. It has become the popular resort for the elite and solid men of San Francisco.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in DEWEY & CO.'S SCIENTIFIC PRESS PATENT AGENCY, 252 Market St., S. F.

FOR THE WEEK ENDING APRIL 11, 1882.

256,271—TRACE LOCK—Jas. A. Bassett, Windsor, Cal.
256,424—ADVERTISING DEVICE FOR STREET CARS—R. F. Bridewell, S. F.
256,283—AMALGAMATOR—Wm. T. Browne, Stockton, Cal.
256,284—VEHICLE SPRING—Geo. S. Buckland, Tulare, Cal.
256,130—ADJUSTABLE STOVE GRATE—De Guerre & De Lano, S. F.
256,202—CAR COUPLING—Butte City, Montana.
256,304—HYDRO CARBON BURNER—Evan A. Edwards, Los Angeles, Cal.
256,354—SAFETY ATTACHMENT FOR ELEVATORS—Chas. B Morgan, Oakland, Cal.
256,366—AIR SHIP—Carl W. Peterson, S. F.
Re-issue 10,086—KITCHEN IMPLEMENT—John W. Ross, Santa Clara, Cal.
256,178—ROTARY ENGINE—A. W. Von Schmidt, S. F.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co., in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

Science Applied to Rupture.

The Latest Improved Appliance of the California Elastic Truss Company.

[From the San Francisco Evening Post.]

In the alleviation of human suffering there have been many discoveries and applications of late years, having for their object the lessening of pain, the promotion of comfort, and the cure of the manifold ills that flesh is heir to. Some of them have proved highly successful, while others have subserved no useful purpose whatever. When, therefore, there is at any time positive and corroborative evidence of inestimable benefits conferred by any scientific discovery, having for its object the good of mankind, it cannot receive too much favorable consideration. For that reason the splendid contrivance patented by the California Elastic Truss Company, whose office is at 702 Market street, San Francisco, is deserving of the most intelligent attention of the medical profession, and all persons having the misfortune to suffer from rupture. Without question it is the most perfect Truss that has been invented, as it causes no pain or unpleasant pressure, can be worn easily, assists in effecting a permanent cure without the aid of medicine, and immediately relieves the suffering and inconvenience which it is the nature of rupture to produce. So decided are the merits of this Elastic Truss over every other kind that it has secured the endorsement of the medical faculty, and is rapidly replacing all other contrivances for the same purpose. The Truss consists of an elastic band and pad, the latter being attached to a spring coming out of the band, so as to yield to every motion, and press in a gentle manner, so as not to cause any irritation, no matter what position may be assumed by the wearer. By reason of its elastic properties it can be fastened with one hand, without any muscular effort, and, once placed, there is no trouble keeping it in position. W. J. Horne is the patentee, and his rights cover the whole of the United States. One trial of his Truss will demonstrate its superiority over all others offered to the public. As experience has shown that tempered spring Trusses necessarily press upon and cause diseases in parts of the body which before were in perfect, healthy condition, this is an important point, to which too much consideration cannot be given.

The State Fair, also Mechanics' Fair, awarded this Truss the medals in 1880 and 1881 over all competitors. We advise those afflicted to call or send to W. J. Horne, of 702 Market street, who will guarantee relief.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P. OWEN—Santa Cruz county.
B. W. CROWELL, San Benito and Monterey counties.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
T. P. WILLIAMS.

DO NOT DELAY.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

Employment.

A medium aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.
J. H. CROSS, Proprietor.

Literary and Musical Entertainment,

At Independent Church, Friday Eve, May 5th.

Unhappiness.

What will make a home more unpleasant and disagreeable than a cross, jealous husband? Nothing; there is nothing in the world that will break a happy, united family sooner than to have a husband eternally finding fault with his wife. He is jealous if she happens to smile on a gentleman friend; he is cross if she does not do everything to please him, and the poor cowed wife is willing to do anything for the sake of peace, and to keep her children from harm. The man who is vile enough to say one word against his loving helpmate should not be allowed to call her by the sacred name of wife. There is nothing so holy as the relationship between husband and wife, and he should treat her as he has vowed to do at the altar. But the husband does not upbraid and abuse his wife before the world; oh, no, that would never do. He wishes to be thought a model husband by his friends. It is when she has no one to protect her, that he will drive her almost to death by his cold, brutal language. Is it any wonder there are so many delicate women in the world? Could any one look into their private life, and see the poor, heart-broken wife and mother, draging her dreary life out with the cruel treatment of her husband, they would say no. It is nothing less than slow murder, and he should be punished as a murderer; it should not be allowed. "Oh, the constancy of woman!" She will hide all her husband's faults if she can, and will stand more than her share of the burdens of life, and God knows, sometimes it is almost past endurance. Life seems a dreary waste, when such is the case, and death would be a welcome visitor. Mothers have stood everything for their children's sake. They have stood between them and the maddened father, and taken the abuse, ay, even blows, that were intended for the poor, little helpless ones; and, yet, what does it amount to in the end? What thanks does a woman get for her loyal deeds? This, and nothing more: When the world finds out that unhappiness exists in a certain family, they invariably say, "there is a woman at the bottom of it." Ah! so on through life, must the weaker sex take the blame of all things, whether they are blameless or not; while the stronger sex may pass through life sinless in the eyes of the community; but there is a higher judgment than ours; he will not pass the judgment of God as blameless as he does here. Is it not a husband's place to protect and care for his wife? To make her path through life as smooth as it is in his power to do so? Yes, and he is no gentleman that will not do it. Many and many poor, heart-broken wives, are crying and praying to be released from their over-burdened lives. They are not allowed to see the bright side of this beautiful world.

THE ARTIFICIAL PRODUCTION OF CRYSTALLIZED QUARTZ.—Considerable attention has lately been drawn to the artificial production of crystallized quartz, which was first obtained by Senarmont by heating gelatinous silica with hydrochloric acid. Daubree obtained it by the action of superheated water on glass, and Hautefeuille by treating silica at a high temperature with sodium tungstate. C. Freidel and E. Sarasin have now prepared it by heating to a temperature below dull redness in a closed steel tube, lined with copper, a mixture of potash, alumina and gelatinous silica, the last in excess, in presence of water. In this way, after continuing the heat, in one experiment, for 14 and in another for 38 hours, they obtained silica wholly, or almost wholly, crystallized. The first experiment yielded numerous very regularly formed crystals of the ordinary quartz form (prism with the two rhombohedrons), which acted strongly on polarized light in the manner of native quartz. In the second experiment the crystals were larger (up to 0 5 mm. long, and 0 1 mm. broad), but mostly broken off at one end. They sometimes had the form of more acute rhombohedrons, with indications of tetartohedral forms, and many of them exhibited striations and modes of aggregation well known in native quartz.

METALLIC CLOTH.—A new material is about to be put upon the market, in the shape of a metallic cloth. An invention has recently been patented for the production of this cloth, which, if desired, can be impressed with a pattern, or printed upon. The mode of manufacturing the material is as follows: The metal intended to be used is rendered into small particles, short or long, according to requirements, and is then mixed with a sticky material, such as India-rubber; this mixture is transferred to a fabric made from cotton, wool, linen, silk or other textile material; the fabric is then dried and calendered or dressed in any suitable manner, so as to produce a smooth metallic face. After this preparation the cloth can be impressed with a desired pattern by the process of embossing; or the pattern may be printed on its surface in the usual manner. The cloth produced as above, when finished, is soft to the touch, and is very pliable. The liquid charged with the metal does not penetrate to the under side of the fabric, but leaves it quite clean.

DOG TRAIN.—The Wood River *Times*, of April 5th, says: "There is between five and six feet of snow in the Sawtooth range, on a level, and three to six weeks must elapse before it can be crossed by wagons. The only means of communication at present is on snow-shoes or by dog train. Mr. Smith, one of Dow's stage drivers, rigged up one of these a week ago. He left Ketchum Sunday night, with another man, six dogs and 500 lbs. of bacon and sugar on a toboggan, and made nine miles before the crust softened so that he was compelled to stop. The dogs were untrained, however, and will do much better as they become used to travel. They are fed on oatmeal mush."

A GREAT source of revenue to Siskiyou county is derived from the sale of furs of various kinds, some of which are quite valuable, especially the silver-gray and other foxes, and martens, the fur of the latter being equal to Russian sable. Mink skins are worth little now, but beaver, otter, fisher and other small animals' furs bring about the usual prices, although the fishers are getting scarce

A TELEGRAPH STORY.—One of the operators in the Western Union office at Boston had an epileptic fit. His medical attendant spoke to him, chafed him and made every effort to arouse him, but in vain. Subsequently one of his fellow-operators drew a chair up to the bed, and took the patient's hand in his. As he did so, he noticed a feeble pressure by the fingers, which pressure presently resolved itself into dots and dashes, faintly communicating to the tactile sense the words: "W-h-a t d-o-c-t-o-r s-a-y a-b-o-u-t m-e?" Asked whether he could hear what was said to him, the patient signified assent by a slight motion with the tips of his fingers, and the result was that his fellow-operator got from the patient enough dots and dashes to describe his feelings to the physician, who was thus enabled to apply the necessary remedies. It is certain that no other method of communication was possible under the circumstances, since the sufferer from epilepsy, although he could hear, could neither speak nor move any of his muscles, except those situated in the digital extremities, and those only with the faintest requisite in electrical communication.

A NEW ROTARY WATER MOTOR.—A recent issue of *Dingler's Polytechnisches Journal* contains a description and several illustrations of Mr. J. Spohn's (Stettin) rotary water motor, which is apparently a very compact and durable piece of mechanism. The piston, if we may so call it, is provided with eight vanes, capable of turning about axes passing through their respective centers of gravity, while to the inside of the cylinder are cast four projections slightly touching the piston, and provided with channels through which the water-producing motion is introduced. The channels are in connection with the main feed pipes passing through the two separate cylinder covers. The vanes, when passing the projections mentioned, are depressed, closing at the same time the exit channels in the piston through which the waste water escapes. Having passed the projections, the pressure of the water causes the vanes to assume their original upright position. Accumulations of water in the machine are prevented by an orifice in the lowest part of the cylinder.

WILLIAMS'

BALSAMIC

CREAM OF ROSES.

For Beautifying the Complexion, Softening the Skin and Producing that Natural Freshness to the Complexion not obtained by any other Preparation.

DIRECTIONS:

Apply to the face and hands at night, just before retiring, and apply a little in the morning, rubbing it well into the skin. After being in the sun any length of time, or riding when the wind has been blowing, a small quantity of the Balsamic Cream of Roses will prevent tanning or roughness, and is sure to bring to the complexion that ruddy and healthy glow so much sought for, and seldom obtained. Its action on the skin is to restore natural circulation to the blood.

NEW ENGLAND MUTUAL LIFE INS. CO.

OF BOSTON,

Is the Oldest Purely Mutual Life Insurance Co. in this Country.

INCORPORATED IN 1835.

ASSETS,	$16,210,465.92
SURPLUS, (by Mass. Standard)	2,635,894.93
Market Value of Stocks and Bonds over Cost	1,474,691.09

The NEW ENGLAND LIFE is the only Company doing business on this Coast that is governed by the

MASSACHUSETTS NON-FORFEITURE LAW

Every Policy-holder is protected by this law against the great risk of forfeiture and loss to which he is subject if a member of a Company organized outside of Massachusetts. The new law of 1880 provides that

FIRST—No Policy shall become forfeited or void for non-payment of premium after the payment of two annual premiums.

SECOND—In default of payment of subsequent premiums it is binding on the Company to issue a Paid-up Policy WITHOUT FURTHER NEGOTIATIONS OR STIPULATION.

THIRD—On failure of insurable interest the Policy-holder may demand and receive the net value of the policy in CASH.

LIBERALITY AND EQUITY in its relations with Policy-holders have always been the governing principles of this Company, and the conditions of its policies in regard to limits of Residence and Travel are of the most liberal description. Before insuring in any other Company examine the application and policy contract of the NEW ENGLAND LIFE, and practical working of the New Massachusetts Law.

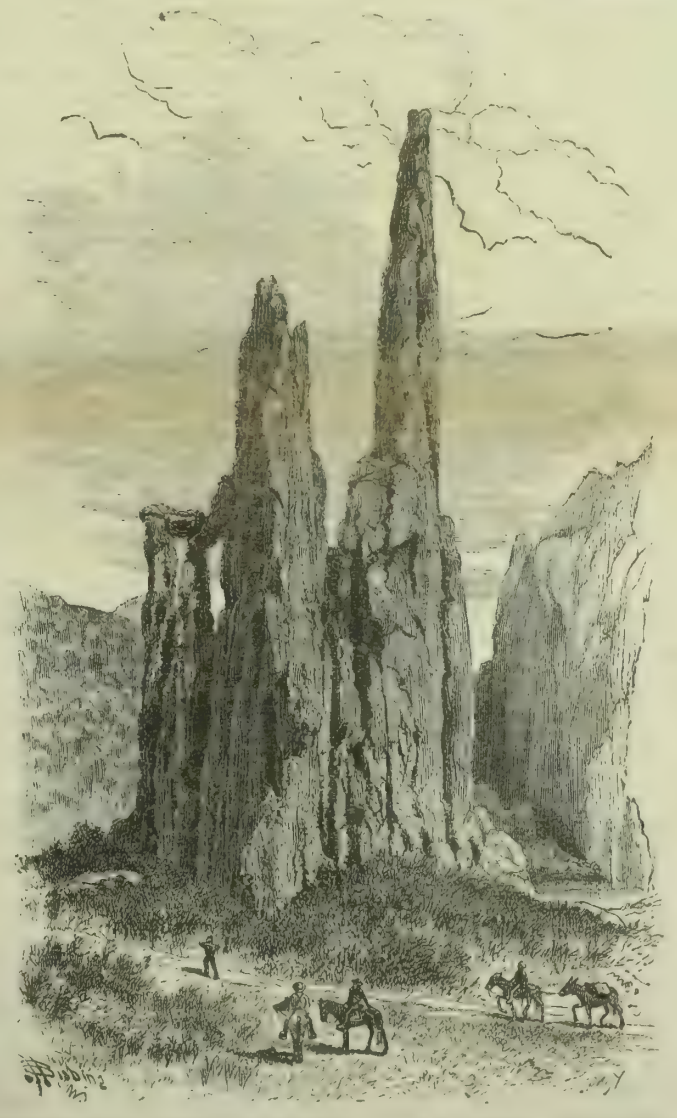
Lodge Attendance.

This is a subject which should interest all members of the A. O. U. W. who have the true feeling toward the Order. Lodge meetings should be made as attractive and interesting as possible. The routine business of the Lodge, like all routine work, offers few inducements for those familiar with it, to attend regularly. Unless there is some social feeling among the members, the Lodge will languish. It is a recognized experience that those Lodges which are best known and most prosperous are those which have members who interest themselves to interest others; members who will occasionally offer their talents and time to amuse or entertain others whose talents do not lie in that direction.

A man who can sing a good song, or tell a good story, or make a stirring, witty speech, is ever so much better for the Lodge than the member who is always jumping up and calling another brother to order for some trivial omission or oversight. He is even a great deal more careful than the stickler for parliamentary law, with whom we are all so familiar. The parliamentary law man is, in most cases, an unmitigated nuisance, and to his efforts often is due a small attendance. People will not come to listen to endless debates on subjects of no special moment, and which at best only serve to air eloquence of a negative sort. As a usual thing, the main question is lost sight of by the parliamentary law man in his endeavor to carry his point and while splitting hairs.

While the "parliamentary law man" or the "point of order man" is talking, the Lodge assumes an air of passive resignation, as if the speech was like an assessment—one of those things that must be borne. There is no enthusiasm and no special attention paid to the remarks.

Let the member who has always something good-natured to say, or who will be apt to entertain his hearers, get upon his feet, and the buzz of conversation stops, the sleepy member stops blinking, and the Lodge is all attention.



We have all seen this, and it brings its own moral. Get through with routine as quick as may be, and bring the attractive features to the front. Let the Master "stir up" his talented members occasionally to their duties, and they can stir the others up in the most effective way. If people are not interested in one way or another at one place, they will go to another and try that.

Try and get the management of the Lodge into the hands of those who have its true interests at heart, and who will be apt to bring the members together, rather than into the hands of such people as will "bore" the members by too close attention to detail and endless discussions on trivial or uninteresting topics.

EVERYBODY is going. Where? To the Workman's picnic at Belmont next Wednesday.

Cathedral Rocks.

We present our readers on this page another of the scenes, which we, from time to time, reproduce, illustrating the wonderful works of nature in the great central region of the country. The massive piles of rock which are shown in the engraving were named Cathedral rocks by Prof. Hayden. The resemblance of the towering masses to the sky-piercing structures which men rear over their cathedrals is very marked. Cathedral rocks are situated in the "Garden of the Gods," in Colorado. Of this locality, after bending toward the east, they appear to be covered by the debris from the mountains. The entrance to the "garden" is through the "Beautiful Gate," an opening through one of the highest ridges of red sandstone. We estimated the hight of this ridge to be 300 ft. The northern end is considerably higher, and viewing it so as so see the end alone, the resemblance to the tower of a grand cathedral induced us to call it "Cathedral rock."

CATHEDRAL ROCKS, GARDEN OF THE GODS, COLORADO.

Prof. Hayden writes in his report as follows: This interesting and peculiar place is a valley in the foothills of the range, and is inclosed by an almost vertical wall of massive sandstone of cretaceous age. The rocks which we find inside have been subjected to an immense deal of erosion, and the many ridges and tower-like forms left standing throughout the garden are the remnants of the parallel strata which dip to the northeast at a very great angle. In some places they seem to dip a few degrees in the opposite direction. As we go toward the mountains, the dip decreases. These rocks are fine-grained sandstones, of a deep brick-red color, with here and there layers and spots of a lighter red, and sometimes white. The ridges are exposed for some distance to the north, while to the south,

---

PAY UP YOUR DUES.—Some of the members are not aware that the payment of dues is as compulsory a matter as is that of the payment of assessments. The law is quoted below, and we commend it to the attention of those who seem to be under the impression that they are all right so long as they keep their assessments paid up—and allow their dues to accumulate: Article X. Sec. 2. Any member who neglects or refuses to pay the dues, as fixed by the By-Laws of the Lodge, for the period of three months, shall not be entitled to vote, and shall be disqualified from holding office. And if neglecting or refusing to pay for the period of six months, he shall be reported to the Lodge by the Financier, and the Master Workman shall, unless otherwise directed by the Lodge, thereupon declare such member suspended from the Order.

Advice to Young Men.

Every young man ought to belong to some first-class fraternal organization. In no way can he gain so many substantial advantages, mentally morally and financially, at so small a cost of time or money as by forming such a connection. The teachings he will receive in the Lodge-room are of a high and ennobling character. It is line upon line, and precept upon precept: and not only this, but he will see numberless instances of the practical application of the lessons taught. Men naturally love to see a noble act well performed, and love to feel that in its performance they have had something to do. Human nature is not altogether bad. It is safe to say that 999 out of 1,000 would prefer to do a good act rather than a bad one, all other things being equal. But all men abhor hypocrisy, and moral lessons supplemented by immoral practices bear the sure fruits of iniquity. If there is any class of organizations under the sun that practice what they preach, it is fraternal societies. It is almost impossible for a young man to grow up surrounded by fraternal influences without becoming a better man because of the fact.

The Lodge-room is a good school. It teaches how to conduct debates, the value of discipline, the strength of combined numbers, social convivity, mutual dependence, and the necessity of promptitude and fidelity in the discharge of every duty. Moreover, it accustoms one to public addresses and ceremonials, and if a person be so inclined, it affords the best possible means to acquire the art of oratory. Thousands of our best speakers to-day got their first and most valuable lessons in the Lodge-room.

The benefit one gets, financially, by Lodge membership, is usually of an indirect character, rather than otherwise. It does not come in the way of wages, or contributions for his individual benefit, unless perchance, to guard him or his against actual want, but it comes in the way of a wide and valuable acquaintance that affords him an opportunity to help himself, when otherwise he might be a stranger in a strange land. It gives him the advantage of confidence when else there would be distrust. A good name is better than gold or precious stones, but a good name is only valuable where its possessor is known.

THE DIGEST.—The Digest of Laws and Decisions of the Order needs a thorough revision and enlargement. There are many subjects not so fully treated as they should be, and many others of great importance not referred to at all. Besides, since the work was issued, many additions and changes have been made to the Supreme Lodge Constitution, which should be incorporated in the Digest. It is to be hoped the Supreme Lodge will find time at its next session to do this important work for the Order. Whatever pertains to our laws cannot be made too plain and explicit.

A NEW LODGE.—A set of supplies has been forwarded to Los Alamos, Santa Barbara county, to Thomas Nixon, Dep., for the purpose of forming a new Lodge, which will be numbered 218. Steadily the work moves forward.

A GOOD time will be had by every one attending the A. O. U. W. picnic at Belmont next Wednesday, the 17th.

Home Miscellany.

May is Here.

Sweet May is here, with beauty fresh and blithe,
As though for us she ne'er had bloomed before,
Swift bounds the hare, with limbs so fleet and lithe,
Among the grass with dewdrops spangled o'er.

The leading grain, of suns and showers born,
In billows, swelling, answers to the breeze;
While near, vague whispers stir the broad-leaved corn,
And softly rustle in the great oak trees.

Low coos the dove, the lark's gay challenge rings,
The glowing sun, with brightness, gilds the hours,
The bee his honey sips, where fragrance springs
From blooming shrubs and opening flowers.

Blue are the skies, soft clouds float lightly there,
The mountains lie in distant, purple haze,
The gleaming fields through fresh'ning waves of air,
Stretch far; the valley hums with sounds of praise.

The frisking younglings skip with life and play;
Submissive to the farmer's practiced rein
The teams, with mowers, cut the scented hay,
While promise smiles in orchard and in grain.

Oh, evanescent May, that thralls the soul!
We love thy witching spell, thy beauty rare;
Yet, as thy plainer sisters onward roll,
We, higher look for beauty free from care.

Mrs. W. D. Ashley, in Rural Press.

Homes and Home Life.*

Trifles make the sum of human life, and trifles make the comfort of a home. The sunbeam is composed of millions of minute rays, so home light must be constituted of little tendernesses, kindly looks and loving words. Good, kind words dropped in conversation may be little thought of, but they are like seeds of flowers, or of a fruitful tree falling by the wayside, borne by some birds afar, haply thereafter to fringe with beauty some barren mountain side, or to make glad some lonely wilderness. "The chief secret of comfort lies in not suffering trifles to vex one, and in prudently cultivating an undergrowth of small pleasures, since very great ones are let on long leases."

"Drops make the sea,
And petty cares and small events,
Small causes and small consequents,
Make up the sum for you and me.
Then, Oh for strength to meet the stings
That arm the points of little things!"

When tempted to scorn the little duties of life, let us remember such sayings as the following:

One day a visitor at Michael Angelo's studio remarked to that great artist, who had been describing certain finishing touches lately given the statue: "But these are only trifles!" "It may be so," replied the sculptor, "but recollect that trifles make perfection, and perfection is no trifle." In the same spirit the great French historical painter, Poussin, accounted for his reputation in these words: "Because I have neglected nothing." In early life we were taught by one of the best of mothers this maxim: "Whatever is worth doing at *all* is worth *well* doing."

A few days ago, I came across this little fable, written by an Eastern poet, which carries with it a beautiful and instructive moral. The poet, attracted by the fragrance of a clod of earth, asks: "Art thou musk?" "No." "Art thou amber?" It replied, "I am but common earth, but the rose grew from me; its beneficent virtue penetrated my nature; were it not for the rose I should be but common earth." As it was with the clod of earth, so it is with us. The heart that is cold and selfish, and glows not with a sympathetic desire to relieve the wants and soothe the sorrows of a fellow-being is but common earth; but every generous impulse, every pure desire, every deed of charity is a rose rooted in the heart, ever blooming, whose fragrant and beautiful flowers penetrate and permeate our nature with their rich and beautiful perfume. "What do we live for," says George Eliot, "if it is not to make life less difficult to each other?" A distinguished writer of our time says: "The grand essentials of happiness in the present life are something to do, something to love and something to hope for. We often spend a great deal of time bewailing grievances, which might be employed to much better advantage. There is a "luxury of woe" in which people indulge, which rarely benefits others or themselves. We do not mean sourness, grumbling or melancholy. It is not that; it is of those secret thoughts of the heart that we speak, which, like the dark outlines of a rock in the depth of a pool, lie only on the bottom and are entirely unseen on the surface. We ponder on our many trials, real or imaginary, forgetting at the same time the many blessings we enjoy. Nothing is so certain to bring genuine, happy smiles to our own faces as to watch them grow in those of others as the result of our sympathy, our gentle words or hopeful deeds. Who ever did a real kindness for another without feeling a warm glow of satisfaction creep into some shady corner of the heart, and fill it with sweetness and peace?

"God has written on the flowers that sweeten the air, on the breeze that rocks the flowers upon the stem, upon the raindrop that refreshes the sprig of moss that lifts its head in the desert, no less than upon the mighty sun that warms and cheers millions of creatures which live in its light—upon *all* His works He has written, 'None liveth for himself.'"

*Read at the Hamilton Church evening meeting Feb. 5, 1882, by Mrs. J. H. Smyth.

Work for Women.

The chief canker at the root of women's lives in the middle classes, which form the staple stock of the community, appears to me the want of something to do.

We do not believe that Providence ordained it that men should work and women should be idle. Boys leave school and strike out in life for themselves; the girls finish their education, come home and stay there, many of them. "Their whole energies are devoted to the massacre of old Time. They prick him to death with crochet and embroidery needles; strum him deaf with piano playing—not music; cut him up with morning visitors or leave his carcass in 10-minute parcels at every friend's house they can think of. Finally, they dance him defunct at all sorts of unnatural hours; and then, rejoicing in the excellent excuse, smother him in sleep for one-third of the following day. Thus he dies a slow, inoffensive, perfectly natural death; and they will never recognize his murder till, on the confines of this world or from the unknown shores of the next, the question meets them—What have you done with time? Time, the only mortal gift bestowed equally on every living soul, and excepting the soul, the only mortal loss which is wholly irretrievable."

Men are taught, as a matter of business, to recognize the value of time, to apportion and apply it; women rarely or never. Labor is worship, says the proverb; we would add, labor is happiness. We pity the woman, young or old, who boasts that she has nothing to do; what a waste of life, what a burden to herself, what a *living dead weight* to her father, brothers, or husband, if she has one. Labor is the great civilizer. It has civilized the world. What it has done for man, it will do for woman, when she will rise to the true dignity of womanhood. Only weak minds cling to inanity and worthlessness; only the parasites and drift-wood of society advocate the sin, sloth and degredation of idleness. Everything in the great realm of nature is permeated with the elixir of activity. The

Home Education of Girls

Is, as a general thing, entirely neglected. Indulgent mothers who have kept their daughters in school from earliest childhood, think it would be unkind to exact of them any useful employment during their vacation. It must all be devoted to relaxation and amusement, leaving the homely household duties, which would enable them to superintend intelligently and well homes of their own, to be learned after they have graduated. What a very grave mistake it is, if no part of their child-life is devoted to those lessons which none should be able to teach as thoroughly and patiently as a mother. Many young girls, after leaving school, enter at once into married life, and what is the result of the mother's mistaken kindness? The home which the lover dreamed of proves comfortless, and the young wife is too often transformed into the heartless devotee of fashion, instead of a companion and helpmeet. A girl marries early, thinking only how pleasant it will be to have a house of her own, but never once how difficult it will be to manage it. Perhaps she takes pride in her charming ignorance of common things. Thus she drifts on to middle age—a helpless, burdensome wife—a lazy, feeble and fretful mother. Woe to the household whose mistress is a foolish, ignorant and incapable woman.

There are those who consider it a positive disgrace to be detected performing any domestic service, when it ought to be considered as part of a sacred duty which without blame cannot be laid aside. If women took up the domestic duties so well understood by our great grandmothers, but now in the majority of cases laid aside, homes would be happier, and good health the rule and not the exception. True there is much that is hard and disagreeable in household cares and labors; but what good thing do we possess which has not required thought, effort, and often unpleasant labor before we came into the full possession and enjoyment of it? Young ladies would soon discover the richer life there is in one's own home, if they were early initiated into a thorough knowledge of the whole routine of home and household duties, so that when they shall have homes of their own, they can intelligently direct their servants, or if necessary, perform the household work themselves. There is no healthy thought without labor, and thought makes the labor happy. This maxim, old as creation, is worth remembering: "Be not the shrinking slave of toil, but its regal master," making whatever you do yield you its best fruits.

If young ladies knew how much influence a kitchen apron honestly worn has upon their gentlemen friends, they might be induced to add that very useful article of dress to their wardrobe. We could cite one or two instances where the wearer of such an apron, being surprised by an early morning call, secured to herself a sensible, good husband. No young man worth the having would think any less of a young lady, if he chanced to call when she was engaged in some domestic employment. It is only the wrongly educated and weak-minded who thinks her duties a disgrace, and frets under them, or shirks them if she can. We do not think that any kind of labor will make one less modest or ladylike. Even if it could be guaranteed that most young ladies would never be placed in positions where they might find it necessary to labor themselves to secure home comforts, or prepare food for their families, knowing how to do it well will do no harm; not knowing how may sometimes subject one to great discomforts and mortification.

It is not a sign of high birth or refinement to be ignorant and delicate. A distinguished writer of our time asserts that a wife who understands not the art of preparing her husband a comfortable dinner, enjoys the privileges of her wifehood by fraud. The Spartans educated both boys and girls to habits of usefulness; their standard of morals differed from ours; they knew or cared little for the doctrine of right and wrong as we understand it. Beauty and usefulness were the standards by which they judged everything. The youths were almost continually out of doors; every boy learned how to plant and to harvest the crops; every girl how to do household work. The highest lady in Sparta did menial work; every girl could do every kind of labor required in a Spartan home. Nothing came amiss to them: but their work was done principally in the open air, not over stoves and in heated apartments. Such a life produced the highest degree of health, and out of this health bubbled and blossomed a sweetness of temper which charmed all who came into contact with it. Their beauty was not of the kind which we usually admire; in them there could be no beauty unless it was founded on perfect health, and this beauty lasted until advanced age. Helen, celebrated in all times as being one of the most beautiful women in Greece, was as handsome at 50 as at 20; and this was almost the universal rule with all women. The Greek women were the finest that ever existed, not only physically, but intellectually. A race of such mothers could not fail to give birth to a noble race of men. Every healthy Spartan girl was obliged to marry; there was no excuse for them. Every sickly girl was obliged to abstain from marriage. Girls were not allowed to marry young; they had to mature first. No sickly young man could marry, but all healthy ones were compelled to do so; or if, perchance, they refused, they were punished. For 500 years there was produced in Greece a succession of the strongest and bravest men, and the most healthful and beautiful women that ever existed.

Every boy and girl should be taught the Value of Money

From earliest youth by the earning of it. A wealthy lady of Oakland told me that her children earned all the spending money she allowed them to have, even the little ones. I was curious to know what they could do, and she told me they cut off all the old faded roses from the bushes and brought them to her, and she counted them and paid them a certain amount per dozen. Every girl should be taught to be self-supporting, for whatever her social or pecuniary position may be, she is liable at some time in her life to be thrown upon her own resources and the cold charities of the world, and this emergency should be provided for. Besides, the ordinary duties of life require that boys and girls be taught to work, whether their parents are wealthy or not. Public sentiment is greatly at fault in this matter, especially with reference to girls. Boys and girls both should be taught that any kind of work is honorable, and that idleness is dishonorable, and that it is the duty of every girl, as well as every boy, to learn how to earn a livelihood. Mothers of the present day bestow too large a proportion of thought and care in educating their daughters to shine in fashionable life—in giving them an ornamental, rather than a solid, practical, or intellectural education. They allow them to discard housework for fear their hands will not be small and delicate. Music, painting and embroidery are very useful and pleasant accomplishments, but should not be sought after to the exclusion of the practical, and by no means the least important part of a young girl's education and preparation for an active, useful life. Mothers are culpably to blame, if in their mistaken kindness they neglect teaching them the lessons in domestic economy, so necessary to their future welfare.

All physicians agree in saying that housework is the most healthful exercise that women can engage in. The body possesses no fewer than 400 muscles, and each muscle is designed to serve some particular end. A sound state of body requires that every one of these muscles be brought into daily action, and it is only by a certain amount of daily exercise that each muscle will gain in strength and soundness; otherwise it must become feeble and delicate. The remedy of the errors in education lies with women. Can they not bring up their daughters more usefully and less showily—less dependent on luxury and wealth? Can they not teach them from earliest childhood that to labor is a higher thing than merely to enjoy; that even enjoyment itself is never so sweet as when it has been earned? Can they not put into their minds, whatever be their station, principles of truth, simplicity of task, helpfulness and economy? Any woman is unworthy of the just empery of her sex when she gives up to either fashion or ceremony her common sense, comfort or good taste; when she suffers herself to waste hour after hour, day after day, year after year, in the company of frivolous folks, to whom she can do no good and from whom she can receive no benefit.

Sunlight.

Light is one of the most active agencies in enlivening and beautifying a home. We all know the value of sunlight as a health-giving agent to the physical constitution. We are more active under its influence—can think better and act more vigorously; but many people seem to have an idea that it is their greatest enemy. They carefully exclude its beams from their rooms, close the blinds and curtain the windows; it fades their carpets and stuffed furniture and tans the face and hands. This exclusion of light is also a protection against flies, as they will not remain in a darkened room, but seize the first opportunity to escape, thus showing the superiority of their instinct over the deluded reason of human beings. Let us take the airiest, sunniest room in the house for our living-room—the workshop where brain and body are built up and renewed; let us throw open the blinds and windows for the free entrance of the good twin angels of nature, sunlight and fresh air. A person of sensitive physique may be nursed into settled hypochondria by living in close, dark rooms where the sweet, fresh air is determinedly shut out and the foul air is determinedly shut in.

Good temper is, with many people, dependent upon good health, good health upon good digestion, good digestion upon good, wholesome food, well prepared and eaten in peace and pleasantness. Ill-cooked, untimely meals are as great a cause of bad temper as many a moral wrong. We believe that badly prepared food is the direct cause of more dyspepsia, headache, liver complaint, quarrels, divorces and untimely deaths than any other one thing. Untold amounts of good materials are wasted by bad cooking. Country people are short-lived; the ancestral daily pie with its soggy, indigestible crust, together with meats fried, or rather *stewed* in fats, do their work slowly but surely. Every cook should understand the principles of practical chemistry, physiology and hygiene to be able to prepare healthful and nutritious food; hence the great need of training, or cooking schools, where girls and women may be taught the art of cooking upon scientific principles. Of the need of trained mothers, Mrs. Diaz writes: "There seems to be utter blindness and stupidity among a large class of people. From what they say of the difficulty of bringing up their children, it must take an archangel to do it rightly. Still they do not think a woman who is married and settled down to family life needs much education. Moreover, in educating young women, that which is universally acknowledged to be the chief business of their lives receives not the least attention. The individual who builds our ships, cuts our coats, manufactures our watches, takes charge of our cattle, our trees, our flowers, must know how—must have been especially prepared for his calling. It is only of character-molding, only shaping the destinies of immortal beings, for which we demand neither preparation nor a knowledge of the business. It is only of our children that we are resigned to lose nearly one-fourth by death, owing to ignorance and injudicious nursing management. Were this rate of mortality declared to exist among our domestic animals, the community would be aroused at once." If women are ambitious to walk in the higher paths of science, the kitchen affords laboratory work equal to that of any. The study of yeast, its component parts, its action with flour and other materials in bread making, affords a scope for the highest exercise in the scientific field—a field in which men of the grandest attainments, and world-wide reputation have not disdained to work, and it is to them that we owe our better knowledge of homework. Humanity, generally speaking, is composed of two sexes; the family foundation must be laid by the union of the two. In the life-work of this union, it must be divided into two parts—the outside, and the inside work. In households there must be one ruling head, and that is, or should be woman. The master, be he father, brother or husband, has quite enough to do outside. He is the bread-winner; the woman the bread-keeper, server and expender. When a house boasts both master and mistress, each should leave to the other the appointed work, and both qualify themselves rightly to fulfill the same, abstaining as much as possible from mutual interference.

Worry.

A man who can trust his wife or housekeeper, should no more interfere with her affairs than she should pester and annoy him with things that he cannot remedy and does not understand. One ought always to look at the bright side of things, and never make a fuss about trifles. A common sin of housekeepers is worry; those who will worry will always find enough to worry about. Worry retards rather than forwards the work. It tries the mind before the work is begun. It makes one fretful, sours the temper, and disturbs the peace of the household. There are certain evils which cannot be overcome. We should make the best of them, and not add the burden of worry. Another element of happiness is

Order.

Order is heaven's first law, and all women should make their daily round of life as harmoniously methodical as they possibly can, leaving no odd hours to be idle and dreary in. "If husbands and wives would always remember that with them, as in other associations, union is strength, that united they stand, divided they fall; that together they should walk through life, together share the joys, together bear the burdens and the crosses, what a happy world this would be. If it is a united kingdom, the wife accepts the rough as well as the smooth of the household rule, as her part of the administration. We think the joys and the sorrows, the crosses and the crowns, in married life are about evenly balanced, and nothing will right all the wrongs and bring order out of the confusion of these vexed questions so surely as the shelter of a true home, ruled by the true wife and mother." No man will deny that a good wife is a treasure. Her

care and labor certainly secure him many comforts; but how much would he consider them worth in dollars and cents. Husbands will do wisely to give this matter serious thought, lest they make the mistake of taking their wives' labor and attentions, as a matter of course, instead of feeling that in taking his name his wife claims not only an equal right to his cares and labors, but also an equal right to a proper use of the money she has done her part to earn or to save. She should not be considered a recipient of charity, but a joint partner with her husband in the family firm.

The following maxim, written by the ancient Egyptian prince, Ptah-Hotep, is worth remembering: "Love thy wife and cherish her as long as thou livest; be no tyrant; flattery acts upon her better than rudeness, and will make her contented and diligent." He recommends, also, liberality in affording her dress to exhibit herself to her friends.

Woman's Kingdom.

There is a grand and noble mission—work to be done at home, not alone among the poorer classes, but among the rich and cultured, to raise the standard of industry and knowledge in the home. We would say to every woman who has a home: Let home stand first—before all other things. No matter how high your ambition may transcend its duties, no matter how far your talents or your influence may reach beyond its doors, before everything else build up a true home. Be not its slave; be its minister! Let it not be enough that it is swept and garnished, that its silver glistens, that its food is delicious. Feed the love in it; feed the truth in it; feed virtue in it; feed all charity and gentleness in it. Then from its walls shall come forth the true woman and the true man, who, together, shall rule and bless the land.

Labor is Worship.

Laborare est orare—To labor is to pray.

Pause not to dream of the future before us;
Pause not to weep the wild cares that come o'er us;
Hark, how creation's deep, musical chorus,
  Unintermitting, goes up into heaven!
Never the ocean wave falters in flowing;
Never the little seed stops in its growing;
More and more richly the rose-heart keeps glowing,
  Till from its nourishing stem it is riven.

"Labor is worship!" the robin is singing;
"Labor is worship!" the wild bee is ringing;
Listen! that eloquent whisper upspringing
  Speaks to thy soul from out nature's great heart.
From the dark cloud flows the life-giving shower;
From the rough sod blows the soft-breathing flower;
From the small insect the rich coral bower;
  Only man, in the plan, shrinks from his part.

Labor is life; 'Tis the still water faileth;
Idleness ever despaireth, bewaileth;
Keep the watch wound, for the dark rust assaileth;
  Flowers droop and die in the stillness of noon.
Labor is glory! the flying cloud lightens;
Only the waving wing changes and brightens;
Idle hearts only the dark future frightens;
  Play the sweet keys, wouldst thou keep them in tune!

Labor is rest from the sorrows that greet us,
Rest from all petty vexations that meet us,
Rest from sin, promptings that ever entreat us,
  Rest from world sirens that lure us to ill.
Work, and pure slumbers shall wait on thy pillow!
Work, thou shalt ride over care's coming billow!
Lie not down wearied 'neath woe's weeping willow!
  Work, with a stout heart and resolute will!

Droop not, though shame, sin and anguish are round thee!
Bravely fling off the cold chain that hath bound thee!
Look to yon pure heaven smiling beyond thee;
  Rest not content in thy darkness—a clod.
Work for some good, be it ever so slowly;
Cherish some flower, be it ever so lowly;
Labor! *all* labor is noble and holy;
  Let thy great deed be thy prayer to thy God

—*F. S. Osgood.*

Always in a Hurry.

Reposeful women are a delight to their friends; one can almost forgive slovenliness when it is accompanied by an air of complete ease from care; and air which says: "I am always ready to talk with you or listen to your list of joys or sorrows." On the contrary, the woman who is continually "on the go" is extremely tiresome. We have before our eyes a girl who is a fair representative of the latter type. She is wasting her nervous force and her life in a lamentable manner. She expends enough force and energy in a day to last one so slim of stature for a week. Nothing she does is done slowly or deliberately. Always in the hottest possible hurry, her life seems to be wound up to the highest possible pitch. She dashes about the house, slams doors, and bolts her food in half the time that more sober people take to eat theirs. With her trifles are momentous; her tongue seems to be incapable of uttering a soft sound; her temper is all afire at a moment's notice; her adjectives are all superlatives, and sometimes she is ready to weep because she has no bigger and more expressive superlatives to use. Her energy, if properly engineered, would almost stem Niagara; she never moves except as if she were a Maud S., and going for a wager. Fervidness and rapture are daily food. Where will all this end? We answer—in the madhouse or the grave. It is the pace that kills; it is this pace which renders nervous prostration one of the most prolific diseases of the day. Let those of our women who are always intense, take a thought for the next generation, in whom the seeds of this abnormal haste are being sown with fatal effect.

BENJAMIN F. DELANO, formerly United States Naval Constructor, died in Brooklyn on Saturday, aged 75. He had a good deal to do with Perry's expedition to Japan and Kane's expedition.

For our Boys and Girls.

Our Puzzle Box.

Cross-word Enigma.

My first is in health, but not in youth;
My second is in love, but not in truth;
My third is in travel, but not in trip;
My fourth is in spank, but not in whip;
My fifth is in hang, but not in kill;
My sixth is in evil, but not in ill;
My seventh is in lie, but not in cheat;
My eighth is in mile, but not in feet;
My ninth is in mine, but not in farm;
My tenth is in cheek, but not in arm;
My whole is the name of a celebrated poem.

L. C. C., Calistoga, Cal.

Problem.

A gardener undertook to plant a number of trees at equal distances apart in the form of a square. When the square was completed, on his first trial, 11 trees were left. He then enlarged the side of his square by one, when he found 24 more trees were required to complete the square. How many trees did he have?

Word Square.

1. A mineral.
2. A valuable metal
3. Temper of mind.
4. Limits.

MELANCTHON.

Numerical Enigma.

I am composed of 13 letters.
My 4, 3, 3 is sick.
My 2, 11, 7 is a snare.
My 6, 4, 7 is to strike.
My 3, 8, 13 is to rent.
My 6, 1 is a personal pronoun.
My 13, 11, 12 is a number.
My 10, 4, 7, 11 is an extremely small quantity.
My 5, 1, 13 is to gain.
My 7, 4, 9 is a very valuable metal.
My whole has made great progress since the invention of the art of printing—the great "art preservative of all arts."

JERRY.

Proper Names.

1. A fowl and a grain.
2. To search and a personal pronoun.
3. A testament and a tropical fruit.
4. A railroad carriage and a personal pronoun.
5. To be aware and an interjection.
6. To blacken by fire and a falsehood.
7. A month of the year.
8. To injure and a metal.
9. A bony covering of certain animals and to put on.
10. An ancestor and ourselves.

AUNT SARAH.

Answers to Last Puzzles.

NUMERICAL ENIGMA.—Hail Columbia, Happy Land.

LETTER CHANGES.—1. Bog, dog, fog, hog, log. 2. Bray, dray, fray, gray, pray, tray.

CHARADE.—Wed-lock.

SYNCOPATIONS.—1. Bear, bar. 2. Time, tie. 3. Place, pace. 4. Burt, but.

ANAGRAMS.—1. Petunia. 2. Heart's ease. 3. Violet. 4. Belladona. 5. Coriander. 6. Dandelion, 7. Anemone.

Sam Belford and President Arthur.

The other day a little red-headed boy, eight years old, developed a new streak of tenderness and simplicity in the character of President Arthur. Little Sam Belford lives near the White House. His father is the sole Congressman from Colorado. Sam goes down to the wharf to fish every afternoon and has the usual luck of the fisherman. He has been spanked redder than his hair is many a time for this performance. But Sam is a wonderfully bright boy, and learned far beyond his age.

With face all begrimed with mud, and clothing that suggested the spanking of the day, Sam looked up and saw a great tall man smoking a cigar.

"What are you doing there?" said the man.

"Fishin', Mr. Arthur."

"Catch anything?"

"A few perch. I come down here nearly every day and fish. Do you ever fish, Mr. Arthur?"

"Oh! yes, I like to fish; I caught a fifty pound salmon once in the St. Lawrence river."

"Why don't you come down here and fish with me sometimes?"

"Oh! I've been down here before. How did you know my name was Arthur?"

"Oh! I know you very well. You are President of the United States. We like you because you appointed Teller. Don't you remember me.?"

"Yes, you were up in my office with your father. Your name is Sam Belford."

"What are you doing down here, Mr. Arthur?"

"I frequently come down here"—and with a tone of sadness in his voice—"I am a widower; my wife used to live in that house before we were married," indicating it with his finger.

"Well, we'll meet here and fish often, then. I'll always have plenty of bait, but if I were a man like you are, with nice horses and carriages, I'd go out to Great falls, where there's bully fishin'."

"Oh, I get tired of riding. I like to walk around here and smoke my cigar and think. I am bothered too much and get tired of sitting down. Come up and take dinner with us, Sam."

"No, sir; I refused to take dinner with Governor Pacheco to-day, because I'm going to the circus. Are you goin' to the circus?"

"Well, I don't think I can to-day, Sam."

"Well, Governor Pacheco is goin' to take me, and he's coming down in a carriage after me, too. That's bully, ain't it?"

"Yes, when I was a little boy like you, I used to like circuses, too. I haven't gone much lately."

"Tell you what I wish you would do, Mr. Arthur. I wish you would take me up in your carriage to see Jumbo when he comes. I want to seee that big elephant. It's a couple of miles out there where that circus is, and you want to see Jumbo, too, don't you? You must go to that circus?"

"Well, we'll see about it, Sam. Pull up your line and walk up to dinner with me."

"I can't; indeed I can't; but I'll walk up street with you. I must see that circus."

They walked up the street chatting about one thing and another till they got to Seventeenth and F. streets, near where Sam lives. Suddenly Sam's eyes flashed, and he yelled to a hackdriver to stop. With a glow of enthusiasm he says:

"There he is! There's Governor Pacheco. Don't you know him, Mr. Arthur? Let me introduce you to him."

Before Sam got his answer from the President, Pacheco was out of his carriage, and Sam said, with the dignity of a statesman: "Mr. Arthur, this is my friend Governor Pacheco; I want you to know him."

It was very evident to the President that Sam thought more of Pacheco than he did of him, because Pacheco was going to take him to the circus, and he thought more of the circus han he did of them both.

Sam went home and had his face washed and another suit of clothes put on him, but before he started for home, he turned round and said to the President:

"Mr. Arthur, Herbert likes you."

"Who is Herbert?" asked the President.

"Why, my big brother. He's 12 years old. Don't you know him? I'll have to bring him around and introduce him to you."

"All right, Sam, bring him around. But come around some day at 4 o'clock when I get through my business, and I will take you out riding, and may be we'll go to Great falls and fish half an hour. But that day you must tell your mother you are going to drive with me."

Still Sam would not let him off. His little tongue fired off the parting question: "Ain't you 'fraid to go down there where I fish alone; ain't you 'fraid you'll be shot like Garfield?"

"I never think of that, Sam. I stroll around in all parts of the city and never feel that I am in danger. I like to get out of the White House and walk. It is dreary in the White House."

The President tells this storyas a little incident, and laughs at the boy's precociousness, but Sam tells it at length, as a commonplace affair, not seeming to realize that he will be remembered in history; but as he tells it and thinks of it, wonders whether "Mr. Arthur" is going to take him to the next circus and a-fishing at Great falls.

Health Column.

Foods for Infants and Invalids.

It may be questioned whether there is any subject which comes more closely home to people of all classes than the character of the food supplies specially provided for infants and invalids. The increasing demand for this class of preparations (due partly to an actual need, but chiefly, we suspect, to the skillful advertising of manufacturers and the liberal margin of profit they offer to the retail trade), has led to a great number and variety of such competitors for public favor. Put up in ornamental boxes, they appear on the counters of every grocer and in the show-cases of every apothecary shop; and not unfrequently their actual value is in inverse ratio to the pretentiousness of the package and the price.

As a rule, purchasers are obliged to take the virtue of such articles upon trust, few having the means or the knowledge requisite for an analysis, microscopic or chemical, of the preparations which they are advised to try, perhaps by the family physician, and yet a mistake in this connection may be fatal.

For all young infants, and for adults in many cases of sickness, starch food is injurious; sometimes in being a source of intestinal irritation; sometimes, as in the case of very young children, in furnishing a semblance of aliment without the reality, such children being as unable to digest and assimilate starch as sand. Hence the usual claim with respect to prepared foods of the cereal class is that they are free from or contain very little starch, while they are rich in gluten and other food elements capable of nourishing the sick and the young. To discover how far these claims are well founded, Dr. Ephraim Cutter, of Harvard college and the University of Pennsylvania, has lately made microscopic examinations of something like 40 cereal foods, developing facts of the highest importance to physicians and their patients, as well as to parents having young children. The results of his investigation appear, with numerous illustrations, in the *American Medical Weekly*, and are worthy of study by all who are interested in microscopy or in the nourishment of invalids and children.

SOFT BEDS.—Why should soft beds be considered unwholesome? Certainly they afford more comfort than hard ones. Hard beds should never be given to little children, and parents who suppose that such beds contribute to health by hardening and developing the constitutions are surely in error. Eminent physicians—both here and in England—concur in this opinion, and state that hard beds have often proved injurious to the shape of infants. Birds and animals cover their offspring with the softest material they can obtain, and also make soft beds for them; why not do the same with our own young?

Household Hints

How to be Happy and Long-Lived.

First, study to acquire a composure of mind and body. Avoid agitation of one or the other, especially before and after meals, or while the process of digestion is going on. To this end, govern your temper; endeavor to look on the bright side of things; keep down, as much as possible, the unruly passions; discard envy, hatred and malice, and lay your head upon the pillow of charity with all mankind. Let not your wants outrun your means. Whatever difficulties you have to encounter, be not perplexed, but only think what is right to do in the sight of Him who seeth all things, and bear without pining the results. When your meals are solitary, let your thoughts be cheerful; when you are social, which is better, avoid disputes, or serious arguments, or unpleasant topics. "Unquiet meals," says Shakespeare, "make ill digestions;" and the contrary is produced by easy conversation, a pleasant project, welcome news, or a lively companion. I advise wives not to entertain their husbands with domestic grievances about children or servants, nor ask for money, or propound unreasonable or provoking questions; and advise husbands to keep the cares and vexations of the world to themselves, but to be communicative of whatever is comforting, cheerful and amusing. Self-government is the best step to health and happiness.

In this connection the following suggestions are apropos:

Eat slowly, as if it was a pleasure you desired to prolong, rather than a duty to be performed as soon as possible.

Don't bring your prejudices, your dislikes, your annoyances, your past misfortunes, or future forebodings to the table. They will spoil the best dinner.

Respect the hours of meals; you have no right to injure the temper of the cook, destroy the flavor of the viands, and the comfort of the family, by your want of punctuality.

Have as much variety in your food as possible, but not many dishes served at one time.

Find as little fault as possible with the food prepared, and praise when you can.

Finally, be thankful, if you have no meat, that you have, at least, an appetite, and hope for something better in the future.

LEMON ICE.—Soak half of one box of gelatine in a pint of cold water, put it in a porcelain kettle, pour on nearly one pint of boiling water; when the gelatine is dissolved, put in two-thirds of a coffee-cup of white sugar and a half a coffee-cup of lemon sugar, boiling long enough to make jelly; remove from the fire, then pour in, slowly, three beaten yelks of eggs, the whites of the eggs beaten to a froth; flavor with two teaspoonfuls extract of lemon; pour into a mold and set to cool. This is a delicious dessert, nourishing and relishable for the convalescing sick.

TAPIOCA PUDDING.—Soak four tablespoonfuls in a little water over night, or two hours; boil one quart of milk and pour over it while hot; when cool, add half a teacup of sugar, one egg and the yelks of two well beaten; flavor with Dr. Price's extract of lemon, and bake; when done, beat the two whites of eggs with two tablespoonfuls of pulverized sugar, spread upon the top, return to the oven to brown.

STEAMED GRAHAM BREAD.—Two cups of Graham flour, one egg, one tablespoonful of melted butter, three quarters of a cup of molasses, two teaspoonfuls of baking powder. Steam for an hour and three quarters; eat while warm; cover with a heavy cloth when you take it from the steamer; the crust will be more tender if this is done.

STEAMED JOHNNYCAKE.—Beat one dessert-spoonful of sugar with two eggs; add two teaspoonfuls of buttermilk, half a teacupful of sweet, rich cream, two even teaspoonfuls of soda, or enough to sweeten the buttermilk, a little salt, one cupful of flour, and meal to thicken. Steam from one and a half to two hours.

COFFEE CAKE.—One cup of sugar, one cup of butter, one egg and one cup of molasses well mixed together; then add one cup of strong warm coffee, with a teaspoonful of soda dissolved in it, four cups of flour, one pound of raisins, stoned and chopped fine, one tablespoonful each of cloves, cinnamon and nutmeg.

FRITTER BATTER.—One pint of milk, three eggs, a little salt, one pint of flour. Beat the yelks of the eggs well; add part of the milk and salt, then the flour and milk alternately, beating it all quickly. At the moment of cooking, stir in well the whites of the eggs beaten to a stiff froth.

BUTTER SCOTCH.—Butter Scotch, the children's favorite, is made of one cup of butter, one cup of sugar and one cup of molasses. Boil until it hardens in water. Then spread it thinly in pans, and mark it in little squares or diamonds.

THE Lodi *Review* counts up over 2,000 acres in that vicinity that have been planted in watermelons this season.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "good of the Order."

Golden Gate, 8.

The old pioneer is moving to the front. At their last meeting the J. W. degree was conferred on two candidates. The work of giving the degrees was done so well that Bro. J. Conn, M. W. of North San Juan Lodge, took occasion to compliment the officers at the close of the meeting.

Unity, 27.

Unity, No. 27, is steadily increasing her roll of membership. At her last meeting there was a very large attendance, and as it was the off night, the evening was pleasantly passed in sociality, speech making and attending to their duties in caring for their sick brethren and looking after the interests of the Lodge.

Valley, 30.

Valley, No. 30, opened the month of May with seven applications (two by card), and gave the J. W. degree to three candidates. The average age of the applicants was 30 years. It is expected by several of the leading members of Valley that their membership will exceed 1,000 at the next Grand Lodge meeting.

Oakland Lodge Locals.

Brooklyn, 3.

On the 11th inst. Brooklyn Lodge, No. 3, was favored with the presence of their new District Deputy, Chas. E. Alden. Bro. Alden is a young man well qualified for that position of trust. His presence created an amount of enthusiasm not experienced by the brothers for years. They seem to feel they had an instructor given them in whom the utmost confidence could be placed. Bro. Alden responded to a call in an able manner, and gave excellent advice as to the value of harmony existing among brothers. Truly, Bro. Alden's district may well feel proud of their Deputy. Bros. V. S. Northey, P. M. W., A. G. Cook, Geo. Chase, P. M. W., J. W. Watson, P. M. W., O. C. Kirk, and others spoke with earnestness as to the cause of so few attending the meeting, and the general feeling prevailed that a want of fraternal principle was to a great extent the cause.

Keystone, 64.

The following resolution, offered by P. M. W., A. T. Dewey, was unanimously adopted, May 9th, by Keystone Lodge, A. O. U. W., Oakland: *Resolved*, That the thanks of this Lodge be tendered to G. M. W., W. H. Barnes for his able services on the occasion of our recent musical entertainment, and also to each and all of the talented musicians and speakers who generously volunteered their popular services, complimentary and beneficially for our sorely afflicted past M. D. Examiner, Dr. J. B. Williams.

Lodge Locals.

Stockton, 23.

We had the pleasure of visiting Stockton, No. 23, on Friday evening, May 5th. Every officer was present, although the attendance was not large. One candidate was elected to receive the degrees. A feature of the proceedings was a close and careful scrutiny of his antecedents. One petition was received. A proposition was made by Bro. E. De Lano to have, hereafter, socials monthly, which was seconded by Bro. Eugene Lehe and Deputy La Rue. As a result of this suggestion, a committee of five was appointed to put the proposition in force, and report the plan at the next meeting.

Oroville, 40.

Bro. L. A. Simon, M. W. of Oroville Lodge, No. 40, who is also a delegate to the Grand Lodge of I. O. O. F., favored us with a call. He has good news from this part of our jurisdiction. As he says, "We are working well and our Order is in much favor." One incident has lately happened that speaks for itself: Bro. Davis, lately deceased, of this Lodge, left a family of six children in destitute circumstances. The brethren paid his assessments and took care of him through a painful sickness. His wife and six children would now be the objects of charily if he had not been a member of the A. O. U. W.

Mission Lodge 56.

EDITORS WATCHMAN:—Though our Lodge has not been represented in your columns for a long time, we are alive as ever, and increasing the membership very rapidly. This has been a sad day for Mission Lodge. We buried for the first time since our organization, a brother Workman. Bro. Manuel Seceda, who died Sunday, May 7th, was buried to-day. It was the largest funeral which has been witnessed here for many years. About 60 members were present, who followed the corpse to its resting place. A good man has left us. Peace to his ashes. The picnic of the several Lodges in the district will take place May 27th, at Dry Breech. As in former years, it will no doubt be largely attended. In one of our late meetings a committee was appointed to make arrangements for the purchasing of a suitable lot whereon to build a hall. We have money enough to make a start. The present hall, which we lease, is getting too small for our large membership. Believing that I have written everything worthy of mention, I close for to-day with the promise of more soon.—GOLDEN SHORE, Mission San Jose, May 10, 1882

The Butte City Lodge Picnic.

EDITORS WATCHMAN:—Thinking that perhaps a brief report of the picnic of this Lodge, held on May 1st, would be acceptable and tend to bring your truly valuable paper into more prominent notice here, I hereby submit the following: The picnic was participated in by Nelson Lodge, Chico Lodge, Durham Lodge, Maxwell Lodge, Colusa Lodge, College City Lodge, and a part of Biggs Lodge. An oration was delivered by Bro. W. H. Jordan, P. G. M. W.; speeches were made by Bros. Hartley and Butler, of Butte City Lodge, and Bro. Humphreys, of Princeton Lodge; singing by Bro. A. C. Heimbach, M. W.; music by the Arbuckle band. There were at least 1,000 persons in attendance. All had a truly enjoyable time; in fact, the whole affair was of such a pleasant nature that it did credit to the A. O. U. W., and will long be remembered by those who took part in it. The following is a song as composed and sung, May 1, 1882, at the picnic, by A. C. Heimbach:

I am going to sing a song,
Which I hope will please you all,
It is all about a little Lodge
That meets in Miller's hall.
To our brethren I would say,
Who have come to spend the day,
We hope you'll have a jolly time
Upon this first of May;
We are in for lots of fun,
So join us in our glee,
We can have it without rum
I know you will agree.
Our committee have been hard at work,
As you can plainly see,
In arranging for a pleasant time
For you and for me;
They have fitted up the grounds,
Which we find so neatly fixed,
That you may all enjoy yourselves with 206.

The objects of our Order
I will now give unto you:
Do unto each other
As you would have them do to you;
Our principles are charity,
An object truly grand,
And, with hope and protection,
We are a gallant band;
Our cause is good and true
Wherever we can be,
And lots of good we can do
In C. H. and P.
Our regalia is a badge,
Which we think a charm
To wear on such occasions,
With a girl upon each arm,
Promenading up and down
To the music of Arbuckle's band,
There is nothing so enchanting
And nothing quite so grand.

And now my song is ended,
When I relate to you
Some of the funny features
As they present themselves to view:
You will find within our Lodge-room
Workmen good and true;
And the brethren will excuse me
If I make a pun or two:
We've a "Butler" that never stole a spoon,
Because he never got a chance,
An "Angell" that won't reach there soon,
Because he would like to dance;
We've a "Miller" without a mill,
And a "Black" that's truly white;
A "Wait" that will wait with patience
Until he gets a bride;
We also have a "Taylor"
That never made a coat,
But he can tell you all about
The "riding of the goat."

In behalf of Butte City Lodge
I extend you all a welcome,
To Princeton and Colusa,
And our brethren from Nelson,
To Chico and to Durham Lodge,
Also to College City,
Accept the hospitality
Of the members of Butte City.

Fraternally yours, in C. H. & P.,
JOHN H. STURCKE, I. W.

Linden, 167.

We had the pleasure of meeting Bro. E. H. Fine, P. M. W. of Linden, in our recent visit to Stockton. Our brethren of Linden are getting along nicely. They now number 31 members, and have never had one of their membership suspended.

Aurora, D. of H., No. 8

Aurora, No. 8, one of the bright gems of this grand Order, gave a choice entertainment to a select company Tuesday evening, May 9th, it being their first anniversary. The following programme was given: Piano solo, Sister Annie Congdon, that was well received; duet, Bro. R. Faraday and Mr. F. W. Spencer, well received and heartily encored; instrumental duet, piano and flute, Dr. C. T. Deane and Bro. David Wilder, County Clerk; this was a pleasing and artistic effort that received a hearty recall, kindly answered; original essay, by Sister Cummings, wife of Bro. A. H. Cummings, of Olympic; this was an elaborate and interesting discussion of the "Sunflower and the Esthetic Relations in Society;" solo baritone, Bro. H. B. Passmore, a very worthy effort that was loudly encored; duet (instrumental), Sister A. W. Oxley and Miss Fannie Oxley; this artistic effort was quite pleasing, and was received with much favor; original essay, "Matrimonial Infelicities," Geo. W. Dixon, P. M. W.; this was the funny piece of the evening, and produced much merriment; vocal solo, Bro. T. W. Atherston; his deep bass voice and fine execution were received with much favor; vocal duet, Miss Fannie Gibson, teacher, and Miss Hattie Bennet, pupil; a beautiful blending of cultivated voices that was awarded an enthusiastic recall, and kindly answered by a solo by Miss Gibson, and might be termed the "hit of the evening;" vocal duet, Bros. Passmore and Atherston, well known in musical circles; this fine performance closed a pleasing and successful entertainment. Bro. O. A. Dearing acted as master of ceremonies, and Mr. F. A. Spencer kindly furnished a fine piano, the "Spencer," for the occasion. The chairman then invited all to the banquet-room, where a good collation was ready. After the good things had been dispensed, the chairman introduced Bro. Cummings, who made a short and eloquent speech, followed by Bro. Rosebach in a few humorous remarks. The merry company separated in a happy frame of mind at a late hour, all highly pleased.

Sacramento Lodges.

EDITORS WATCHMAN:—I have just returned (April 15th) from Union Lodge, and am full of enthusiasm; and who could be otherwise after listening, as I have been doing, to the report of such Representatives as Union had the honor of being represented by this session—men of good address, who have the good of the Order at heart, and make its success their study, both at home and abroad. Grand Representatives Norton, Brewer and Wulff were present, and made their report, and if their eloquence in Grand Council was as great and convincing as at home in the Lodge-room (and I have no reason to doubt it), the interests of the Order were well cared for, and the wish that Union Lodge may ever be as well represented, was the expressed sentiment of the members. The report of the re-election of Past Grand Master Barnes was received with every evidence of universal satisfaction, and with some doubts of his ability to improve his record. The excitement and preparation for attendance on the Grand Lodge absorbed for a time other interest, and consequently but few local crumbs have fallen from the table; but the good work still goes on. Each meeting night a new name or more is heard, and the interests of the sick and disabled are well cared for, and the best means of doing them good and rendering assistance the principal theme of debate. More next week.

Visited Union Lodge to-night (April 29th), and, as usual, feel that it was good for me to be there. After the usual conferring of degrees, the Committee of Entertainment called Bro. Robert Philips to the rostrum, and the large attendance were favored with an original essay, full of pathos, and breathing fidelity to the Order. Bro. C. H. Eldreth followed with an oration, which was loudly applauded. Bro. Eldreth is young in years, and a young member of the Order, but is of the right kind, fulfilling the duty assigned him without offering any excuses, and in a manner highly creditable to himself. After the wants of the sick had been attended to in good style, Bro. Davis, late of Chico Lodge, but now of Union Lodge, was called on, under the Good of the Order, and responded with a well-received address. Bro. Wulff, P. M. W., although recognized as one of our orators, entered into the spirit of the evening, and fairly outdid himself in a sentimental and fraternal speech, for which he received many hearty handshakes and congratulations. Bro. Past, D. D. G. M. W. and G. G., having just returned from an Eastern tour, announced his return in a characteristic speech. Bro. A. D. Jordan, of Noe Valley, No. 86, having a conundrum on the brain, divided it with the Lodge and was praised for his generosity. Bro. Dustinan, M. W. of Sacramento Lodge, made a business speech, and to the point, relating to the welfare of both Lodges. Recorder Cooley recited a selection which raised a call for more, but Bro. Cooley, being used to recalls, declined to give too much of a good thing. You will no doubt say it is about time to close. It is now 11 o'clock, and no one has yet left the Lodge-room; they are all warmed up, and a reasonable time after the Lodge closed the hall was full of eager talkers who, when the janitor turned off the lights, reluctantly adjourned to the street, and, long after they should have been in bed, a spirited crowd were discussing the benefit system. Sacramento Lodge is but little behind Union. I forgot to report that our new D. D. G. M., Bro. Conckrite, P. M. of Sacramento Lodge, also favored us with an address, and if he works as well as he speaks, this district is in no danger of backsliding. As this letter is stretching out, I will tell you about Sacramento in my next; also, I hope to give you an account of our picnic. This is a city of picnics; one every day in the week, and one to-morrow. Yours in C. H. and P.,

B. MUDDLED.

Sacramento, April 29, 1882.

THE PLACER COUNTY PICNIC.—The Placer *Herald* of the 4th says: The A. O. U. W. picnic, held at Towle's grove, near Lincoln, last Wednesday, was one of the biggest affairs of the kind ever held under the auspices of any local organization in western Placer. The location is a delightful one for the purpose, and the Committee of Arrangements had made every preparation essential for the comfort and convenience and enjoyment of the guests. The music by the Artillery Band of Sacramento, was first class, and the dancing platform large and well canvased. The attendance aggregated from 1,000 to 1,500 people, and there was not an incident occurred to mar the pleasure of any, unless we except the light showers of rain that came on in the afternoon, and dampened the ardor of a few of the dancers. The oration by the Governor was pointed and well delivered, and elicited praise from all. The affair, which was enjoyable and extensive in all its features, was concluded by a grand ball in one of the warehouses at Lincoln depot in the evening.

The Honcut Lodge Picnic.

In the neighborhood of 800 people attended the picnic given in Gould's grove, on the Honcut, Monday, by Honcut Lodge, No. 205, A. O. U. W. Oroville furnished the largest delegation, though there were a great many present from Marysville, Biggs and this city. The grounds are beautifully situated and especially adapted for such assemblies. There was a large dancing pavilion, in which the happy throng beguiled the hours away from early in the morning until almost sunset. Nagle's band, of Marysville, furnished the music. It was good. In the evening a ball was given at Moore's station in Merrill's hall. About 70 couples participated. It was a pleasant and enjoyable affair throughout.

The above item is from the Gridley *Herald*, and we take the following, on the same subject, from the Marysville *Appeal:*

The picnic was given under the auspices of Honcut Lodge, No. 205, A. O. U. W., and was mainly under the excellent management of D. P. Merrill, of Moore's station. The "literary exercises" began at about two o'clock. Wm. Schneider, Past Master, of Oroville Lodge, No. 40, was the President of the Day. He called the assemblage to order, gave a hearty welcome to all, and then introduced the orator of the occasion, F. F. Carnduff, District Deputy Grand Master Workman, who delivered an eloquent oration, outlining the history, organization, objects and methods of the A. O. U. W. At the close of the oration, D. P. Merrill, Past Master Workman, of Honcut Lodge, presented Mr. Carnduff with a handsome jewel, bearing on one side the colors of five different organizations of which the recipient is a prominent member, and on the other an appropriate inscription. The gift was from Honcut Lodge, No. 205, A. O. U. W. Mr. Merrill made a very neat presentation speech, to which Mr. Carnduff feelingly replied. This closed the exercises of the day, and dancing was then resumed.

There were no prizes awarded, and there were no races or games. No wines or liquors of any description were allowed to be sold on the grounds. The picnic was very orderly and well conducted. No disturbance of any sort occurred. The weather was perhaps a little too cool in the morning, but later in the day became warm enough to be entirely pleasant to everybody.

Obituary.

DIED—In Los Gatos, April 23, 1882, WILLIAM H LUNDY, aged 52 years.

Mr. Lundy was an old resident of Los Gatos, and being a member of the A. O. U. W. of this place, the funeral services were conducted by the Order. The body of the deceased was conveyed to the hall by six pall-bearers selected from the Order, where a sermon was delivered by Prof. Brown, of Vallejo. The hall was filled to its utmost capacity, by the members of the Order, and the numerous relatives and friends of the deceased. At the close of the sermon those present were given an opportunity to look for the last time upon the pallid face of one, who, but a few short weeks ago, might well have been considered one of the most robust and strongest man in Los Gatos. The members of the Lodge were then formed in two lines, marshaled by Dr. J. L. Berry, and marched in funeral procession to the grave, following the hearse and mourners. The ceremonies at the grave were conducted by Master Workman, H. U. Ball, and Past Master Workman John Erickson, in a solemn and impressive manner. At the close of the ceremonies, after the last sad tribute a sympathetic brotherhood could pay to the dead had been completed, they again formed into line and marched back to their hall.

This being the first time that Los Gatos Lodge No. 76, A. O. U. W., has been called upon to bury one of its members, it is gratifying to know that the call to the sad duty was responded to by nearly all the members of the Order. It is also gratifying to know the ceremonies attending this funeral were performed in a manner that reflects highly to the credit of those to whom the principal duties of the ceremonies were assigned. All honor to our noble Order. The lesson it taught on last Monday cannot fail to win sympathy from the hearts of all who love their fellow men. —*Los Gatos Weekly News.*

A GRAND EXCURSION.—The members of the Ancient Order of United Workmen of San Jose have decided to go on a grand picnic and excursion to Monterey on Tuesday, May 16th. This is a joint affair between Enterprise and Mt. Hamilton Lodges, and they propose to make it one of the most pleasant excursions of the season. The fare has been reduced to a figure never before heard of, being $1.50 for the round trip, children 75 cents. By the courtesy of the railroad company and Mr. Geo. Shoenwald, manager of Hotel del Monte, the beautiful and picturesque park has been secured, five large dancing halls have been constructed, and everything done which could in any degree contribute to the pleasure or happiness of those attending. Connected with this excursion it is the intention to raise funds to fit up a large new hall for the use of Workmen.

BRO. HODGE'S cloak and suit rooms, No. 10 Fifth street, is the place for the ladies to get a ready-made suit, or to order in the latest style and at the lowest rates.

Probate Confiscation.

The complaint is general, and not wholly without cause, that the estates of deceased persons are to a great extent absorbed in the costs and attorney fees attending their settlement. The father or the mother owning real estate dies intestate, leaving minor children, and, not only is it necessary that the estate of the deceased be probated, but the estate going under the operation of the law to the children must needs be kept in court through their entire minority, and often at such cost to the estate that little remains for distribution.

As most persons know that this result can to a great extent be avoided by making a will, I suppose no one who reads this and has anything to devise expects to neglect this important duty; but as he or she is not expecting to "shuffle off this mortal coil" just yet, the matter is likely to be postponed until too late. The title to the real estate is generally in the husband, who as generally neglects the matter of making a will, and the widowed wife is for years compelled to consult the probate judge as to how she shall educate and how clothe her children, and render consecutive accounts of every item of expenditure in their behalf, and pay large fees for the inestimable privilege.

This is not according to the desire of the deceased, but rather the result of a pernicious custom and gross carelessness.

The title to real estate acquired during marriage should, as a rule, be placed in the husband and the wife jointly, and each should make a will, leaving all of his or her property to the other and dispense with the necessity of any bond. Very few husbands and fathers desire, in case of their death, the nurture and education of their children placed in the hands, substantially, of others than the mother, and yet, as above indicated, this is generally the operation of the law as applied to the custom of putting the titles to real estate in the husband's name, and failing to invest the wife and mother with the titles by will.

The following form of a will, sufficient for the purposes suggested, is submitted as simple, plain, and concise, and in the hope that it may induce many to act, who have hitherto been content with good intentions.

The last will and testament of ——— ———.
In the name of God, Amen.

I, ——— ———, now residing at ——— ———, do declare this to be my last will and testament: That, after the payment of my debts, if any, and funeral expenses, all my property and estate, of whatever sort or description and wheresoever situated, shall go and belong to my beloved husband (or wife, as the case may be) ——— ———, to have and to hold unto my said husband (wife) h— heirs and assigns forever. And I appoint my said husband (wife) to be executor of this my last will and testament, and request that —— be not required to give any bond as such executor, the necessity of security being given being hereby waived.

Witness my hand and seal this ——— day of ———, 188–.

{ L. S. }

The foregoing was signed and sealed by the said ——— ———, in our presence, and we, in his (her) presence, at his (her) request, and in the presence of each other, sign hereto as witnesses,

———, ———.

—Inter-Ocean.

Comments.

Believing that some of our readers might be helped to record their wishes by the above, we submitted it to our legal adviser for an opinion as to its character. He replies:

The article contains good advice and it is applicable here. However, if there is nothing but community property, there is no need for the wife to make a will, for "upon the death of the wife, the entire community property without administration belongs to the surviving husband."—Civil Code, Sec. 1401.

Would make a single improvement in the form for the attestation of a will. The will given in "Probate Confiscation" is good, down to the attesting clause of the witnesses. There I would put this:

"The foregoing instrument was at the date thereof by the said——— ———, signed and sealed in our presence and by him published as, and declared and acknowledged to us to be is last will and testament, and we, at his request and in his presence and in the presence of each other have subscribed our names as witnesses thereto.

———, ———.

[Two witnesses, with their places of residence.]

Resolutions of Respect.

[In Memoriam.]

Riverside Lodge, No. 120, A. O. U. W., Compton, Cal., April 25, 1882.

Whereas, Our beloved brother, Jules L. Barbey, has met an untimely death, under very painful circumstances; and we, as a Lodge, will greatly feel his loss, and, although we shall ever regret the cause of his untimely death, yet we shall always have in grateful remembrance his many noble qualities; therefore, be it

Resolved, That the hall and charter of this Lodge be draped in mourning for 30 days in memory of our departed brother, and that we, as a Lodge, in the death of Bro. Barbey, have lost one of our most zealous workers for the noble principles of the Order. Bro Barbey was one of the charter members of this Lodge, had held all of the offices of honor and trust in the Lodge with great credit to himself and honor to the Lodge, ever being ready to defend the noble principles of our beloved Order. He had no enemies, and, being possessed of a generous heart, he had endeared himself to all who knew him, who will long mourn his untimely end and greatly miss him from the field of his usefulness while yet in the prime of life. His funeral was attended by a large concourse of friends, while his brothers of the Order, with bowed heads and sad hearts, laid his remains to rest in his silent home.

Resolved, That a copy of these resolutions be spread upon the minutes of this Lodge, a copy presented to his widow, Emeline A. Barbey, and, also, a copy be forwarded to the Pacific States Watchman for publication.

C. E. Birgh,
J. H. Lathrope, } Com.
David E. Smith.

A Placer County Picnic.—The Placer *Argus* of the 6th gives an account of the Workmen's picnic at Lincoln, from which we condense as follows: The picnic given at Lincoln on Wednesday by the A. O. U. W., of that town, was a great success, notwithstanding the threatening weather before and the showers that caused it to be somewhat prematurely broken up. Nearly the entire population of Lincoln and Sheridan were there, together with large delegations from many neighboring towns in Yuba, Sutter, and other adjacent counties, as well as those of Placer county. The number of people on the ground must have been from 2,000 to 2,500. The place selected for the festivities is known as Towle's grove, and is situated a mile and a half or two miles north of the town. The best of order and good feeling prevailed. We did not see a single drunken man, nor did we see or hear any row or other unpleasantness of any kind during the day. Gov. Perkins arrived on the ground shortly before lunch time, and after that important part of the programme was disposed of, the Governor delivered an address, which elicited frequent and hearty applause. Dancing was indulged in by the young folks, for whose special use a platform 30x75 had been constructed and covered with nice white canvas. There were plenty of good, serviceable benches for the accommodation of the ladies and children and the old people, and the boys played football, the girls danced, swung, or flirted, and, in a word, everybody enjoyed themselves. Too much credit cannot be given to the Workmen of Lincoln and the citizens generally for making such a success of it.

"Hardening" the Body.—A young man was an earnest advocate of a theory that the human body can accommodate itself to any temperature in which it may be placed. One winter he determined to harden himself by wearing no covering for his ears; they were badly frozen on a very cold day, and were tender for several years after. He grew wise and abandoned the hardening process. A young woman heard an eloquent lecture on the importance of fresh air in chambers at night. The lecturer said there was no danger from a window slightly opened; the body would soon harden itself so as to resist the effect of the exposure. She tried the experiment one cold night and caught a severe cold, which lasted the entire winter. She lost faith in hardening against cold. A young mother maintained that children ought not to be brought up too tenderly. Arms and legs ought to be hardened by exposure in early years, and not be made tender by warm coverings in winter. She lost her two oldest children by croup and pneumonia, induced, as the physician said, by insufficient clothing. She gave up the attempt to harden the others. The best way to harden the body is to protect it well from extremes, both of cold and heat, and build up a strong constitution by good food, good sleep and good exercise. The Scotch Highlanders, with their bare legs, are victims to rheumatism.

The Californian for May.—The May issue of the *Californian* has a most excellent portrait of Longfellow from a recent photograph. Prof. Sill has, in the body of the magazine, an article on the dead poet that is at once discerning and appreciative. A profusely illustrated series of "Studies of the California Missions," by Frances F. Victor, is begun in this number. So much that is romantic and fascinating in the earlier history of California is connected with the missions, that these articles will prove of unusual interest. Pictures are given of the missions San Gabriel, San Luis Obispo, Carmel, San Diego, San Buenaventura and San Juan Capistrano. That of the Carmel mission is a full-page sketch by the well-known artist William Keith. A character poem by J. Russell Fisher is also accompanied by a spirited engraving, "Only a Tramp." Amelia W. Truesdell has a poem entitled "The Lost Jeannette," and there are numerous other articles of ability, including several stories of marked power. James O'Meara tells the story of the celebrated Mier prisoners. Altogether this is one of the best issues of the *Californian*, and it should be duly appreciated.

Mr. O. J. Lincoln, of Santa Cruz, manufactures the "Self-Adjusting Hammock Chair," which is one of the best and cheapest luxuries that have come to our notice. This hammock chair adjusts itself to any desired position, from sitting to reclining, or vice versa, without effort. They are strong, durable and light, occupying only four inches in thickness when folded, and weigh 12 lbs. For sea-side and summer resorts, camping parties, hotel or home they are an attraction and comfort that is popular, ornamental and useful. No home is completely furnished without one. Prices, $4.50 and $5. Sent to any part of the State on receipt of price, or C. O. D. Address O. J. Lincoln, Santa Cruz, Cal.

Cream of Roses.—Bro. John R. Williams, chemist and druggist at Stockton, is proprietor and manufacturer of what is known as balsamic cream of roses, for beautifying the complexion, softening the skin and producing that natural freshness that belongs to the rosy tint of good health. It is not used as an artificial means to change the natural complexion, but as a remedial agent to impart a healthy action to the skin of the body. It will produce a glow and freshness of complexion that make the old look young, and the young, fair and rosy. The demand for it is increasing largely. Orders are given for it from cities east of the Sierra Nevadas.

A Temperance Sermon.

Where can a more impressive temperance sermon be found than in the following description of an actual occurrence, on the streets of San Francisco, early Sunday morning, May 7th?

Officer Fields rushed over to the fallen man, and found that he had been wounded and was dying. Raising the head of the wounded man, he blew his whistle for assistance, and the call was responded to by officers Fensieur, Furlong and other officers, and the former went for a doctor and a hack. At about this time John staggered to the spot where lay the form of his dying brother, and the scene apparently caused him to throw off, in part, his drunken lethargy, and to realize what he had done, for he cried out, "I did it; I stabbed him," and then gave way to grief. The scene was a most affecting one, John, who had been badly wounded, having received knife-wounds in the head and neck, from which the blood was streaming, threw himself upon the body of his dying brother, and hugged and kissed him, repeating in most beseeching tones, "Don't die; don't die," and then turning fiercely to the officers, shouted, "Send for a doctor." As he embraced his brother James, the blood from his own wounds gushed forth, bathing the face of his dying brother in its crimson flow. Over all this the moon cast its cold gray light, bringing forth more vividly the horrors of the spectacle, and revealing the narrow trail of blood extending from the corner of Polk and Sutter streets, along the pavement to where the dying man had fallen, dropping, as he fell, his own pocket-knife, with which he had cut and slashed at his brother John. Finally, Officer Fields dragged the weeping and moaning man from the prostrate form of his victim and brother, and took him to the central station, where he was booked on a charge of "murder." In his pantaloons pocket was found a large pocket-knife, besmeared with his brother's blood.

Where rests the responsibility for this terrible crime?

Fats and Fatty Acids.—To recover grease and fats from water or suds in which wool has been washed several processes may be employed. One of the best is to treat the water with sulphuric or muriatic acid, by which the grease or fat is decomposed, and the fatty acids separated. This should then be removed to a separate vessel, preferably a lead-lined wooden one, heated to 212° with live steam. A small quantity of chalk should be added to neutralize the free sulphuric or muriatic acid present, and the mass thoroughly stirred with the addition of hot water. It should then be left standing for some time to settle, and the fat can then be drawn off clear. It can be reconverted into soap by alkali, or may be further refined by the methods in common use and used for the preparation of candles. The following plan, according to Simmons, for recovering oils and other useful matters from soapsuds and other waste waters, in use in England, is to treat them with the exact amount of a mineral acid requisite to liberate the fatty acids in the form of magma (or paste). This is placed in filters and treated with acid and alkali, and pressed, with the aid of heat, to separate the fatty acids. The fatty acids are distilled in stills lined with a metal or alloy not acted on by oil, a steam jet or exhauster assisting in the discharge of the vapors.

Cotton Hose.—The universal use of hose for irrigating purposes, hydraulic mining, factories, hotels, steamships, fire engines, etc., in California, has induced the Eureka Fire-Hose Co. to put the celebrated brands of seamless cotton hose and rubber lined hose in stock, of following brands: "Garden Hose," "Red Cross." "Paragon" and "Eureka," and Bro. W. T. Y. Schenck, of 36 California street, is the Pacific Coast agent. For fire engines this hose is used in most of the large cities, it being stronger, safer and more durable. Climatic influences do not affect it, and it can be put away indefinitely and gain strength.

Metalline.—The compacted material known as metalline is destined, it is believed, to effect a great revolution in both heavy and light bearings. Its moderate strength requires that for heavy work it should be supported by metal; it was introduced in the form of plugs thickly distributed in the bearing surfaces. The U. S. Government has recently ordered this material to be applied in five thousand bearings. It called for two millions of the plugs. An improvement was in progress which would allow oil to be used with it.

Pacific Grove Retreat.—This favorite resort is now open to visitors and campers. A large number of cottages have been built, as also a city of tents erected this season for private use and for rent. This "health resort" is growing in popularity and interest each year. It is so replete with natural charms beside that of climate, that Monterey may by justly termed "the queen of American watering places."

Bacteria in the Air.—After a method which he does not describe, P. Miguel claims to have succeeded in counting the number of bacteria in a certain amount of air, and he finds that the same varies with the season. In summer and fall they amount to 1,000 cells of bacteria in one cbm. of air; while in winter, the number of them in a cbm. of air is often only 4 or 5

Worthy of Mention.—Kohler & Chase, of San Francisco and Oakland, are the oldest and largest music dealers on this coast. It is a satisfaction to trade in their important line of goods with a firm so well known and reliable, having such great advantages as they have long possessed.

An Electric Light Buoy.—A large iron buoy was recently towed from the Government works at Tomkinsville, Staten island, to the lower bay, where it is to be used to support an electric light. It is fitted with an apparatus intended to convert the power of wave motion into electricity.

The Seventeenth Industrial Exhibition.

The seventeenth industrial exhibition of the Mechanic's Institute will be opened in the new pavilion, in this city, on August 15th, and continue until Sept. 16th. The official notice to exhibitors is as follows.

Applications for space can be made at any time, and should be made as early as possible, at least two weeks previous to the opening of the exhibition.

The pavilion will be opened for the reception of goods from and after Tuesday, August 1st.

Articles can be entered for exhibition or competition, as desired.

No charge of any kind will be made to exhibitors for space. Steam and water will also be furnished free, in reasonable quantities.

Space allotted to applicants and not taken possession of by the arrival of their goods, or otherwise, on or before Friday, August 11th, may be assigned to other exhibitors.

No article on exhibition can be removed until the close; but reasonable facilities for making sales for delivery at the close of the exhibition, will be afforded.

Power will be furnished for driving machinery, from the main line of shafting, which is 2 15-16 inches in diameter, and will make about 110 revolutions per minute. Driving-pulleys, 30 inches in diameter, will be furnished free, and in operation three days previous to the opening, and exhibitors of machinery in motion will be required to have their machines in running order on that day.

Pulleys for the main line, if furnished by exhibitors, must be accurately balanced, and have the owner's name plainly marked thereon, and should be received and placed in position by Friday, August 11th, as, up to that time, it can be done without unnecessary labor and inconvenience.

The Board reserves the right to direct the general arrangement of the articles on exhibition, and to regulate the dimensions of all signs and advertisements.

The most effectual means will be taken, through the agency of the police and otherwise, to guard and protect the property on exhibition; and it will be the purpose of the managers to return all articles to the owners without loss or injury. Still, all articles deposited will be at the risk of the owners.

A liberal number of premiums will be awarded, consisting of gold, silver and bronze medals and diplomas.

The announcement of awards will be made by the Board of Managers, on Saturday, September 9th.

All boxes and packages containing articles for the exhibition should be marked: "Seventeenth Industrial Exhibition," San Francisco, with the name and address of the sender. If the freight thereon is paid, it will be taken charge of by the Board, and removed to the exhibition building. Cartage at the expense of the exhibitor. A detailed statement of the contents of each box or package should be enclosed with the same, or sent separately by mail or express.

Blank applications for space, a copy of the rules and regulations, and any other desired information, will be given on application to the Secretary, J. H. Culver, or the Superintendent, J. H. Gilmore, at the office of the exhibition, 27 Post street.

India-rubber Varnish.—Dr. Elder gives the following recipe for making India-rubber varnish: Inclose 30 grams of finely-cut caoutchouc in a capacious linen bag, and suspend this within a flask containing a liter of benzine, by means of a thread held fast by the stopper so that the bag remains near the surface of the liquid. In the course of six or eight days, the soluble portion of the caoutchouc—about 40% to 60%—will pass into the benzine, while the contents of the bag will expand enormously. The clear solution, which is quite viscous, and contains 1.2% to 1.5% of caoutchouc, is then carefully separated. The swelled contents of the bag retain one-fourth to one-third of the benzine used, and may be utilized for the preparation of an inferior kind of varnish. A solution of India rubber in benzine, kept in half-full bottles, is decomposed on exposure to light, which may be seen by the change in the solution from a viscous to a thin fluid condition. Even in the dark this change goes on, but it takes about three times as long.

What Our Coins Weigh.—One million dollars in gold weighs 3,685 5 7 lbs. avoirdupois; 1,000,000 trade dollars weigh 60,000; 1,000,000 of 412½ grains weigh 58,928 4-7; 1,000,000 in fractional coin weighs 55,114 2-7; 1,000,000 in five-cent nickels weighs 220,457 1-7; 1,000,000 in three-cent nickels weighs 142 857; 1,000 000 in one-cent pieces weighs 685,714 1-7. A coinage of 4,000,000 of the new silver dollars per month would amount in a year to 2,838,572 3-7 lbs., or over 1,414¼ tons, and if the pieces were laid side by side they would form a continuous string 1,136½ miles in length.

Antagonistic Woods.—It is said that certain kinds of wood, although of great intrinsic durability, act upon other woods of equal durability in such a way as to induce mutual destruction. Experiments with walnut and cypress, and cypress and cedar, prove that they will rot each other while joined together, but on separation the rot will cease, and the timbers remain perfectly sound for a long period.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi-annually in advance. If errors or omissions are noticed, please write the office direct.

By Telephone.—Subscribers, advertisers and other patrons of this office can address orders, or make appointments with the proprietors or agents by telephone, as we are connected with the central system in San Francisco.

Congenital Color-Blindness.

It is my belief that a large number, perhaps a majority, of the cases of congenital color-blindness have not their seat in the retina at all, but are cerebral in their character. In other words, I believe that in these cases the brain-center of vision has not the power to differentiate the various impressions it receives. This opinion will seem the more plausible when we remember that the sense of sight is a developed or educated one. Though we have received from our ancestors the potentiality of vision, every child that is born must learn to see for itself. Without here entering into a discussion of the question of the development of the color-sense, which has received much attention at the hands of Mr. Gladstone, Magnus, and others, it is safe to assume, with our knowledge of analogous matters, that the differentiation of colors is a power partly inherited and partly developed in the individual; and, moreover, we should expect to find this power, which is cerebral in its character, most strongly developed where the faculty was most used. And so we do find it. Women, who are much more concerned than men in the selection and comparison of colors, are rarely affected with color-blindness; and we all know how much quicker the feminine eye is in detecting slight differences in shades of color than is that of men who are not color-blind. In those cases of color-blindness which, for the sake of distinction, we shall call central, we believe that the brain-center of vision has not been developed to its full or at least to its ordinary power for discriminating between the impressions corresponding to the different colors. The retina may be capable of properly responding to these various impressions, and the optic nerve may carry them as separate impressions to the brain-center, but this has not the power of converting them into individual sensations.—*Popular Science.*

How Odors are Propagated.—According to this view, the ordoriferous bodies, or their molecules, have no more to do (in the sense of physical impact) in producing the sensation of smell, than a luminous body—a candle or the sun—has to do (by impact) with the sensation of light. There is corporeal impact or touch in neither case. Of course, with each melecule as a center of activity, the effect will be more pronounced at the immediate surface (as with all radiant energies) than at any distance. And, undoubtedly, particles of disintegrating, odorous matter are often brought in contact with the Schneiderian membrane; but the sensation of that impact, if there be any, would be of touch, not of smell, as surely as that, from that point of contact to the sensorium, the effect or influence is conveyed by a vibration—a wave-motion in the "fluid" of the nerve-duct—as the undulations of the luminiferous ether are propagated along the course of the optic nerve to the seat of sensation, where they are translated into light and color. But, if, for any portion of the distance between the internal sense and the fragrant body, the odor, like light, is but a motion, it is safe to assume it for all. The analogy of this mode of odors to that of light and sound, is something in its favor.—*Popular Science Monthly.*

Importance of Sanitary Regulations.—The deaths in the Peabody buildings, London, during 16 years, have been at the rate of 16 and 7-10 per 1,000 per annum, while the general death rate of the metropolis during the same period has been 23 and 4-10ths. The death rate in the crowded districts surrounding the Peabody buildings has been stated to be 30 or 40 to 1,000. Dr. S. Gibbon, medical officer for the Holborn district, London, says in his latest report that, whatever may be the cause, there is no doubt that a Jew's life in London is, on an average, worth twice as many years as a Christian's. The Hebrews of the metropolis are notoriously exempt from tubercular and scrofulous taint. Pulmonary consumption is very rare among them. The medical officer of one of the Jewish schools has remarked that their children do not die in anything like the same ratio as Christian children. In high street, Whitechapel, the average death rate on the north side, which is occupied by Jews, is 20 per 1,000, while on the south side, which is occupied by English and Irish Gentiles, it is 43 per 1,000.

Earthquakes.—Dr. K. von Fritsch, of Halle, maintains that the causes of earthquakes are much slighter than has generally been believed; that they may be sought at a depth of not more than 10 or 15 miles, and often of less, and that rather feeble forces may produce earthquakes which will be felt at great distances. The hammer in Krupp's factory, which weighs 1,000 centners, and falls from a hight of 10 ft., produces sensible concussions over a surface five miles in diameter; and a recent explosion in a dynamite factory was felt at between 25 and 30 miles away. Dr. Fritsch points out how earthquakes might and must be produced by the increase and decrease in volume of rocks under the influence of physical and chemical forces, by concussions, by the opening of crevices in rocks, and by the subsidence of masses of rocks due to these agencies.

Tubercular Disease.—Prof. Tyndal recently contributed to the London *Times* a luminous exposition of Koch's remarkable investigation of tubercular disease, demonstrating by experiments on animals that the disease is caused and propagatad by living parasites.

The Kennel Surprised.

We take the chance to slip in this week an engraving especially for our little readers, who cannot yet comprehend the beauty of scenery or the value of new industrial devices. They cannot fail to be pleased with the apparent surprise of the cunning little dogs at the approach of such a queer visitor to the kennel. They have seen different kinds of things during their short lives. They have barked and scampered at the coming of tramps. They have become accustomed to the great bodies of cows and horses which have passed their cosy abode; but this queer thing, moving so slowly and making no noise, what can it be? We hope the little dogs will conclude to bark and run into their house, for this turtle looks to us like one of the snapping kind, and if he should get one of the little paws in his mouth, he would hurt the little dog terribly. However, little dogs are usually fortunate little animals, and perhaps John will come along and cut off the turtle's head for stealing his goslings.

Silence of Friendship.—Only real friends understand silence. With a passing guest or ceremonial acquaintance, you feel under an obligation to talk; you make an effort to entertain him as a matter of courtesy; you may be tired or weak, but no matter; you feel that you must exert yourself. But, with a very dear, intimate friend sitting by you, there is no feeling of this kind. To be sure, you may talk if you feel able, pouring out all of confidence, relieved and refreshed by interchange of thoughts and sympathies. But if you are very tired, you know you do not need to say a word. You are perfectly understood, and you know it. You can enjoy the mere fact of your friend's presence, and find that it does you more good than conversation. The sense of that present and sympathetic affection rests you more than any words. And your friend takes it as the highest proof of your friendship and confidence, and probably never loves you so vividly as in these still moments. No matter that twilight is falling, and that you cannot see each other's faces—the presence and the silence are full of brightness and eloquence, and you feel they are enough.

THE PUPPIES' PUZZLE.

A lady taking tea at a small company, being very fond of hot rolls, was asked to have another. "Really, I cannot, she modestly replied. "I don't know how many I have eaten already." "I do," unexpectedly cried a juvenile upstart, whose mother had allowed him a seat at the table. "You've eaten eight; I've been countin'!"

God and the Scientists.

The Bible knows nothing of severing nature from God, even in her minutest operations. He is everywhere or nowhere. The falling sparrow, the dying midge, the rounding dewdrop, the headlong tornado share his superintendence. Atheistic scientists are right in their insistence that if impersonal law rules an atom, they have demonstrated the origin and permanence of the universe without a self-existent, eternal, all-directing, Personal Intelligence. But the atom has always baffled them, and always will. They can never get done with it. Their deepest wisdom and most searching experiments have always left something unmastered, unreached, unapprehended in every particle of matter to which they ever applied their tests. When they are able to get to the bottom of their bread and butter, it is time enough to proclaim the non-existence of deity. Tyndall and his compeers can no more tell us what is the primary fact of the butter they eat or the coffee they drink, than the baby in the cradle. There is no greater inconsistency in praying than in eating. Tyndall and Huxley, and even the wild and daring Haeckel, and the bold, blasphemous Ingersoll, pray without knowing it every time they eat. They deal with the same mystery in all they do and handle, as that which evokes the Christian's prayer. There is as much room for the petition, "Give us this day our daily bread," as for the scientist's confession of a something that transcends the highest stretch of human wisdom. That something stares the scientist in the face everywhere, with all the attributes which the Bible ascribes to God. The fact of the Divine Omnipresence and the compatibility of prayer with natural law is nowhere more emphatically and comprehensively stated than in these words: "Give us this day our daily bread." Where does law reign more supremely than in the wide circle to which this petition refers? And yet prayer relates to every item in the vast category. Either Tyndall is a blockhead, or Christ was an impostor.

The Author of Nature should know how prayer dovetails into the law of the universe. He should be as wise and competent to reason as Tyndall. When the scientist wishes to produce new results by the voluntary co-relation of eternal laws, he is not hindered or troubled by the consideration of the stability of nature. But when the Christian prays a greater than Tyndall to do the very same thing, whether on a larger or smaller scale, he is pronounced a simpleton. There is not a more inconsistent class of men on God's earth than the God-disowning scientists

Glaciers and Red Snow.

In a letter from Visalia in the *Rural Press*, signed "J. W. A. W.," we take the following interesting points:

A Living Glacier.

Few of our citizens have traveled as extensively in the Sierra Nevada of our district as has Mr. Dusy, especially in the regions surrounding Mt. Goddard (14,000, ft.) on the headwaters of the middle fork of Kings river and the south fork of the San Joaquin. He describes as seen last summer by himself and party, what is more like an Alpine glacier than anything I have seen or heard of in our Sierra, except the living glaciers found by John Muir on Mt. Lyall. It was six miles east of Mt. Goddard, on what may be called the Goddard ridge—the divide between the south fork of San Joaquin river and the middle fork of Kings. It was a mass of clear, bluish ice, estimated to be 80 ft. thick at its upper or deepest edge, where a vast crevice was found, 10 ft. wide, between it and the snow above it. It was about a mile long, and from 500 to 600 yards wide. On its edges were moraines, composed of shattered slate, which Mr. Dusy describes as forming there the upper portion of the slope. At the lower end was a great mass of this slaty debris, which was being shoved along over a substratum of solid granite. He judged that its movement down the canyon last summer was about ten ft., as that was the width of the deep crevice on the upper edge between the ice and snow. I asked Mr. Dusy if he and his party saw the curious and interesting

Red Snow.

His answer was, "miles of it."

By the way, while lately in San Francisco, I had the pleasure of examining with Dr. Harkness, through his strong microscope, the odd and pretty globules of the very small microscopic water plant, *protococcus navalis*, which gives to this snow its red or crimson color. We examined what our party brought from the red snow fields of the Kern region, and what Dr. Harkness found last summer on the Wasatch mountains, Utah. These minute globules appear as round as a ball. The Doctor informs me that they propagate by subdivision, and that the best way to preserve them for examination under the microscope, is to melt a bucketful of the red snow, let the coloring substance settle, pour off the water and save the red sediment, of which you will have about a tablespoonful. Dry this and it forms a pinkish powder, a few particles of which can be moistened and mounted for the microscope at any time. What I had brought from the mountains had been kept uncorked for six months in the water melted from the snow. Some globules from this had retained their red color; others had lost their color but retained their form. Globules Dr. H. had dried, had the brilliant, translucent color of a ruby. Except in richness of color the globules from the two localities were exactly alike in shape, etc., showing, as Dr. H. said, that the plants from the Wasatch and the Sierra are identical, and are, beyond question, the veritable *Protococcus navalis*, discovered first in the Arctic regions and then in the Alps, and in late years found in abundance on many of the higher mountains of Colorado, Utah and California.

The Minute Size of Germs.

It is altogether beyond the power of the mind to conceive the minute size of some of the germs which in their subsequent development work such wondrous changes, and which have such important influences on health and several industrial processes. We read of the experiments of Pasteur, Tyndall, and others, but we seldom realize the infinitely small size of the organisms and germs referred to, for some are undoubtedly so minute that the most powerful microscope fails to detect them. There are some interesting remarks on this subject in a recent number of *Knowledge*, which we quote: "The minute organisms capable of inducing changes analogous to the fermentation caused by yeast, have received great attention of late years and several important diseases are distinctly traced to them. Bechamp estimated that 8,000,000,000 of germs of one micro-ferment only occupied one cubic twenty-fifth of an inch. Not one of these minute bodies could develop except by carrying on complicated processes of a chemical nature, involving very active movements of its atoms and molecules.

The mathematicians have made calculations founded on the pressure exerted by the gases, and other considerations, which show that a particle of the sort of matter, such as albumen and protoplasm, chiefly concerned in life processes, contains in a space of one cubic thousandth of an inch more molecules than any one could possibly form any conception of. Sorby, taking a probable mean of such calculations, supposes one cubic thousandth of an inch of water to contain 3,700,000,000,000,000 molecules. A sheet of ordinary note paper is about one-hundredth of an inch thick. One-tenth of this would, of course, be one-thousandth of an inch, and a little square box of that size each way would hold the amazing number of water molecules mentioned. Perhaps a few thousands of such molecules may suffice for some manifestation of life, but even if many millions should be requisite for the structure of the humblest and simplest germ, we could never expect to see the actual beginnings of life.

Mexicans are making $4 and $5 a day working the placers in Holcomb valley.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and hand some," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

ADVERTISING RATES.

One Square (¼ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (¼ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

WATCHMAN PUBLISHING CO.

Entered at San Francisco P. O. as second-class matter

San Francisco, - - May 15, 1882.

Lodge Histories.

We should like to see one member of each Lodge in this State distinguish himself by coming to the front as volunteer historian for his Lodge. Self-imposed duties ought to be pleasant ones, and it will not be very much trouble for some one of the members to compile a short history which will interest all the others, and which will become a matter of record. Such things are not spread on the minutes of the Lodge, nor need they be buried between the covers of the Recorder's tome. The WATCHMAN will be the history, if some one will be the historian.

We feel sure that each member of each Lodge would like to have a record of its history. When and how it was started, who its various officers have been, and some of its experiences. A perusal of the Recorder's books will give the main facts in each case, and from them the abstract can be made. Incidents in the history of nearly every one can be made of interest to others than members even.

We shall know, of course, by the signatures to the letters we receive, in response to the invitation in this item, who the individuals are in each Lodge that are willing to sacrifice a little time on volunteer duty. It is not necessary to give an elaborate history. This is not what we want. A simple, brief statement of the facts and incidents in the existence of the different Lodges will attract attention and be of benefit to all concerned.

Who speaks first?

Oregon, Washington and British Columbia.

Frank G. Abell, P. G. M. W. of Oregon, Washington and British Columbia, while in San Francisco the other day, was interviewed by a reporter of the WATCHMAN, and in answer to questions, gave the following information:

There are 3,400 Workmen in good standing in the jurisdiction. We are not likely to have over 11 assessments this year. There are 70 Lodges in the jurisdiction, and we expect a large increase of membership this year, as the Order has grown more popular. The arrangement of the separate jurisdiction is much more favorable to us than the general jurisdiction, as our assessments are only half as much. The Representatives to the Supreme Lodge are: J. E. Nottage, of East Portland, G. I. W., Case, of Astoria, and F. G. Abell, of Portland. My opinion of the Relief Law is, that it is a good one, and that the Supreme Master Workman should be sustained in his position.

The New System.

The change in our system, by which all Medical Examiners' reports must be passed upon by a Chief Medical Examiner or Medical Board, we fear, is a long step backward, and will result, we believe, in putting a violent check on the growth of the Order and a consequent increase in the death rate. A constantly changing membership is the salvation of beneficial organizations. The old and hazardous material passes out and newer and fresher takes its place. Besides, everyone who leaves the Order before he dies leaves behind him all the money he has paid into the Beneficiary Fund. The amount of pecuniary gain to the organization, from this source, is far greater than most people imagine. As appears from our Grand Recorder's last report to the Grand Lodge, it amounted to almost $14,000 during last year, in this jurisdiction, and yet our losses were so few as to show the prospective life of a beneficiary certificate of about 16 years, instead of seven, as in the case of life insurance policies.

Now, if the present plan of supervision tends to check the infusion of new blood into the Order, it must, in a measure at least, prove disastrous, and give us no corresponding benefit. That it will do so, it seems to us beyond question. Heretofore we had the Grand Master to supervise all applications after the J.W. degree was conferred, with power to rule the member out of the Order if, in his judgment, he was not properly eligible. This saved much time and expense, and endless annoyances to all concerned, except occasionally to an unworthy candidate, and why we should be particularly tender to such we are unable to see. Now, an applicant must be examined, his proposition sent in to the Lodge, the Medical Examiner's report sent to the supervising officer or officers; then the paper must be examined and returned whence it came, before the Lodge can act upon it. In many cases this will, of necessity, involve a delay of three or four weeks—sometimes considerably more. Good men, whom it is desirable to gather into our ranks, look with disgust on this circumlocution arrangement, while the other kind who are anxiously seeking admission will be content to wait in inexhaustible patience. In our humble opinion the system of examinations that has prevailed since the advent of the Order upon this coast, up to the present time, is the best that has ever been devised. No supervising power can do more than to pass upon the Medical Examiner's report. He cannot, in the nature of things, pass upon the candidate. Any Grand Master, who is fit for the position, can very readily tell whether the examining physician has made his report so as to come within the rules laid down for his guidance and, if so, he must approve, if not he must reject. That is all that can be done now, either by a Chief Medical Examiner or Medical Board. We have removed the responsibility from the Lodge and Lodge physician, where it belongs, and put it upon a man or body of men where it does not belong. The report of the Lodge physician is passed upon and not the candidate as should be done.

We have made for ourselves expense and trouble, and added largely to the labors of our officers, simply to work a great injury to the Order. If the Supreme Lodge will repeal the odious law, by which we are forced into this thing, it will do, not only a great favor to us, but to the whole Order. And why not? Can any living being show where the death rate of a jurisdiction has decreased under the operation of this system? Has not in every instance the result been a saving at the spigot only to waste at the bunghole?. Look at Ohio; the first to adopt the system. Her death rate is unparalleled. Look at Minnesota; the first, we believe, to follow after. This jurisdiction is older than our own, and we have six times the membership, and a far lower death rate. Minnesota is as healthy a country as there is in the wide world, and yet the death rate in the Order there is simply awful, as compared with her neighbors that have been getting along without this arrangement. Results are what we look at, and the results we want most to see are a strong membership and a low death rate, but these have never yet been seen where Chief Medical Examiners or Medical Boards have been made a part of our system. Let's do away with the incumbrance.

MUSIC, dancing and a good time generally will be had at the picnic.

Suicides.

Many Eastern exchanges are lately discussing the advisability of inserting some clause in the Constitution of the Order to protect members from too many assessments. The question of paying the beneficiary certificates of suicides is one which applies with great force to this jurisdiction, as it is a well-known fact that suicide is inordinately prevalent on this coast. Whether this is from some peculiarity in our climatic or atmospheric conditions, as many contend, or whether it arises from our inherited feverish thirst for wealth and the overstrung condition in which the nerves are continually kept in waiting for the outcome of financial ventures, or from a combination of these and other causes, still the fact remains that we lead the list of States in the proportion of suicides to each 1,000 inhabitants. Almost every monthly assessment call contains the names of one or more "unfortunates" who have found the thread of life stretched to an undue tension, and forcibly and thoughtlessly cut it. With speculations as to whether suicide is justifiable or not, or with the possible consequences of the act and its influence in the life to come, we, as an Order, have nothing to do, except to throw a friendly arm around the despondent and despairing, and by kind word and kindly example to draw them from the brink of self-destruction. But with its economical features we can directly deal, and shape the legislation of our Order so as to work the greatest good to the greatest number.

It must be apparent to all, upon giving the subject due thought and consideration, that the life and permanence of our Order will depend upon the care we exercise in guarding against an unduly large death rate. The inscrutable workings of Divine Providence, through famine, pestilence and elemental convulsions, we cannot guard against, save to a limited degree; but this forcible self-destruction is entirely the result of finite, human agency, and can, therefore, be dealt with by finite, human means. No other form of life insurance thus jeopardizes its financial existence. It seems almost a bid for self-destruction. A man becomes despondent and disheartened, and in a fit of "blue devils," contemplates the taking of his own life. Ordinarily, the thought that his death would leave those nearest and dearest to him in dependent, and perhaps destitute circumstances, would be a powerful moral influence to deter him from the rash act. But in case he is a member of one or more beneficiary Orders which do not make suicide a forfeiture of all beneficiary rights, this influence is removed. He feels that, in the event of his death, his family will be able to get along comfortably on the amount of his life insurance—perhaps more comfortably than during his life—and he is led to think that his death would be a mercy to them. There would be instances in which the forfeiture of *all* beneficiary rights would cause great hardship, and there may be a certain injustice in thus depriving a man's family of *all* benefits; but it seems to us this putting a premium on self-destruction exerts an evil moral influence, and we know that it is the cause of much adverse comment from members who feel themselves rather heavily assessed. We hope that this matter will be discussed in Lodge meetings and among the brethren, that some means may be devised to lighten the burden on the members of the Order, and at the same time not work too great a hardship upon the surviving dependents of unfortunate suicides. H.

THE initiatory step taken by Triumph Lodge to appoint a committee to take into consideration the advisability of building an A. O. U. W. hall for San Francisco Lodges is being followed up by several other Lodges. On Thursday evening Burns Lodge appointed a similar committee, and this project is being agitated and discussed in a number of the city Lodges.

THE well-known character and standing of the membership of the A. O. U. W. is sufficient guarantee that this excursion and picnic will be first-class in every respect and the strictest order will be maintained.

WE had the pleasure of a call from Bro. G. H. Shepherd, Receiver of Forest Lodge, 124, at Forest City. As he says, "We are getting along very well; our membership is 50, and we have a good attendance." Bro. Shepherd was a Delegate to the Grand Lodge of I. O. O. F.

"Lodge Locals."

Our "Lodge Locals" are read with avidity by all interested, and form a feature which all appreciate. But there are a good many, however, who must think we evolve them from our inner consciousness, for in some of the Lodges there is no one who seems to take enough interest to let the doings be known.

The WATCHMAN is at all times glad to receive notes of occurrences at Lodges. If the name of one Lodge appears oftener in the paper than another, it is because some one in that Lodge takes the trouble to inform us of its doings. All would be equally represented if some one would take it upon himself to drop us a line occasionally.

It is not very much time that it occupies to sit down and write a page or so of manuscript, giving such doings of the Lodge as may consistently be made public. People are apt to leave such things too much to the Recorder of the Lodge, an officer who already has enough writing to do to keep him busy. Of the interior Lodges, particularly, it is hard to get news. They are out of reach of our reporters, and we do not hear from them at all as frequently as we should.

We hope this mild hint will be taken by two or three dozen good, energetic brothers, and that the next number of the WATCHMAN will bristle with more "Lodge Locals" than ever before.

The WATCHMAN has made a specialty of these "Lodge Locals," and has succeeded in building up a better department of this kind than most fraternal journals. We want still further to extend it, and hope this item will assist in that direction.

A Home for the Order in San Francisco.

EDITORS WATCHMAN:—Our Order having progressed with such remarkable rapidity that the Order now has 22 Lodges in this city, with a membership of over 4,000, the proposition has been brought forward again for the Lodges to take some action to obtaining a suitable lot, to build a hall of its own for the home of the Order. It is claimed that our various Lodges are paying out somewhere near $6,000 a year for rent and something should be done towards obtaining a hall of our own, that the various Lodges might not only all meet therein, but have the offices of the Grand Lodge and Guarantee Fund located therein; and instead of the Lodges hiring halls to give their various entertainments and parties therein, to have a suitable building, that this money might remain within the Order. Already Magnolia, No. 41, and Memorial, No. 180, have appointed a committee of three from each Lodge to consult with other like committees appointed by the other Lodges. If this matter is taken hold of properly, and live men are appointed on the committees to carry the matter through, there is no doubt it can be done. We will say a Hall Association is incorporated with 5,000 shares at $10 a share, which would be $50,000. Each Lodge of the 17 in the center of the city would subscribe for $100 worth of stock, which would make $1,700. Then, with some little energy, subscriptions from the individual members of each Lodge could easily be made to obtain $500, which would make $8,500, which together with the $1,700, by Lodge subscriptions, would make $10,200; while other Lodges that have money in the various savings banks would take larger amounts of stock, as the interest obtained now-a-days from banks is very small; then, again, a grand ball might be given in aid of the Hall Association, and by proper management $3,000 to $5,000 might be realized. Later, a benefit might be arranged at some one of our theaters, likely to prove a success, to the tune of $1,000 to $2,000. In that way, in the course of a year, this Order would be in a fair way to commence a building. Then again there are members of the Order who have money that would prefer to invest it in A. O. U. W. Hall property than to place it in banks. 41.

THE TWO FIENDS.—Dr. J. A. Miller, P. M. W., of Stockton, is preparing a scientific treatise entitled "Two Fiends," being a physiological discussion of the effects of alcohol and tobacco on the human system. Bro. Miller has made this subject a study for the last 30 years, and we anticipate a standard work.

BRO. BARNES seems to be the right man in the right place. The Grand Lodge presented him with a beautiful G. P. M. jewel and re-elected him to the office of Grand Master.—*Fraternal Censor.*

THE literary exercises at the picnic, on next Wednesday, the 17th, will be of the first order, and a treat is in store for all who attend.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. PRATT, G. R.

WM. C. FLINT, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

HEREAFTER it will not be legal to confer either of the degrees of the Order on a candidate till the Medical Examiner's report on his case has been approved by the Examining Board. Such report should be sent to this office as quickly as possible after its receipt by the Lodge to which it is made. To save time, it might be well to appoint the committee of investigation who could be able to report at once on the return of the Medical Examiner's report. Lodges should bear in mind that the approval of a report by the Board does not relieve them of their duty to investigate fully into the character of the applicant, and also of the report, to see in the one case that the applicant is morally worthy, and in the other, that truthful answers have been given by him, so far as can be ascertained. Remember, the Board can only pass upon the paper as presented, knowing nothing of the applicant. If the paper shows him to come within the rules of eligibility, the Board can do nothing but approve, but the Lodge can pass upon the applicant himself, and should never fail to reject for good cause. It is greatly to be feared that the present plan will have a tendency to relieve Lodge Examiners and Lodges of a feeling of responsibility in the premises, and so work great harm to the Order. If this should be the result, the sooner we can get back to the old plan the better; for beyond question, the true policy should always be to keep the burden of responsibility on the Lodges and their officers, and any plan that shifts it to somebody else must of necessity be a bad one.

RECORDERS will please be careful in transmitting Medical Examiners' reports of rejected candidates to endorse them "rejected," giving date of rejection, in order that errors may be thereby avoided.

THE proceedings of the fifth annual session of the Grand Lodge have been sent out to all the Lodges and representatives. The work has been longer delayed than was anticipated, but the delay was unavoidable. Thirty days, after all, is not a very long time in which to get out a pamphlet of nearly 200 pages. Any one entitled, and failing to receive a copy of the work, will oblige by giving notice of the same.

IT is gratifying to notice a visible decrease in the death rate for the last month as compared with that of several previous ones. It is possible that we shall have but one assessment next month, when we have been thinking it out of the question to escape with less than two. Now we will hope for one and be prepared for a greater number.

BRO. L. M. PRINCE, Dep. S. M. W., residing in Tucson, Arizona, favored us with a call on April 29th. During his residence in Oakland he was one of our enthusiastic Workmen, and we believe, from the interest he shows in the jurisdiction of Arizona, his enthusiasm is increasing.

BRO. C. CAMPBELL, Deputy of District No. 1, Placer county, favored us with a call on May 2d. He reports times good, and the Lodges in his district in a flourishing condition. We may expect a marked increase in membership from his district this year.

ONE day devoted to the picnic to aid the General Relief Committee in their noble and generous work in relieving distress among the members of the A. O. U. W., will come back like bread cast upon the waters.

IT was ordered by unanimous vote of Valley Lodge that each widow and orphan belonging to Valley Lodge be given a free ticket to the picnic.

"OF course, I am." Such was the response of a lady when asked if she was going to the A. O. U. W. picnic.

NEW YORK has another "double header" for May, Nos. 8 and 9.

DON'T forget the picnic at Belmont Park.

The Keystone Lodge Entertainment.

As announced in the last number of the WATCHMAN, Keystone Lodge, No. 64, of Oakland, gave a grand musical and literary entertainment on Friday evening, May 5th, for the benefit of Dr. J. B. Williams, formerly Medical Examiner of the Lodge, who has been disabled for some months and labored under severe affliction. There was a very good attendance, and the programme was fully carried out without change or omission of any kind. The announcement that Grand Master Barnes would be present no doubt augmented the attendance materially, and the attentive audience appeared well pleased with the excellently selected and executed programme prepared for them. The Independent church, where the entertainment was given, is a good, convenient building for the convenience of an audience, and the acoustic effects are excellent.

While the people were being seated by the obliging ushers, Mr. H. B. Pasmore played a pleasing voluntary on the organ. The first thing on the programme was a drum solo by Miss Minnie Darnell, who showed that, little as she was, she could handle the sticks skillfully and with grace and precision. Master Workman of Keystone Lodge, J. W. Nelson, made a few remarks concerning the object of the entertainment, and thanking the gentlemen and ladies who had come forward and aided by their talents the worthy object being carried out. A part song was next rendered by Mrs. G. W. Drew, Miss Bessie Vinniecombe, and Messrs. C. E. Loyd and H. B. Pasmore. This was well rendered and received with applause. An instrumental treat followed in the grand piano duet—on two grand pianos—Grand Triumphal march, "Gorta," by Mr. and Mrs. H. Mansfeld. These two brilliant performers, by their correct time, freedom of execution and careful rendering, brought down the house in vigorous applause.

The song, "Swiss Echo," Egghard, by Mrs. G. W. Drew, was beautifully sung, the lady charming all her hearers by a soft, mellow vocalization, the notes being clearly enunciated, while the voice was sweet and musical to a rare and exceptional degree. That the audience appreciated the effort was manifest by the applause. This was followed by "banjo chimes," introducing imitation of church bells and "Home, Sweet Home," by Frank M. Cary, P. M. W. of Keystone Lodge. Mr. Cary showed skill in "picking," and familiarity with the instrument in the way he handled it, especially in the "chimes." Mrs. Geo. Ehrman favored the audience with a well-executed piano solo, which was received with applause. Wm. H. Barnes, Grand Master Workman of California, followed in a few well-chosen remarks respecting the charity feature of our Order, which both amused and interested the hearers. Part 1st was closed by "The Mocking Bird," piano and whistle, A. G. Pratt. Mr. Pratt is a splendid whistler, and executed his part of the programme with skill, precision and taste, and the audience would have liked to have made him repeat, but he would not.

The second part opened with a part song by Mrs. G. W. Drew, Miss Bessie Vinniecombe, Messrs. C. E. Lloyd and H. B. Pasmore. This was well rendered and favorably received. W. H. Barnes, G. M. W., was announced as the next, in "Recitative and Musical." Being happily introduced by Bro. Dewey as a Grand Master in fact, as well as in office, he showed the audience that his talents did not all lie in one direction. He recited "The Twins" in a manner that convulsed his hearers with laughter. Then, at the piano, he imitated the jubilee singers, and sang some plantation melodies with feeling and humor, and by varied means amused and delighted his listeners for half an hour. Vigorous and long-continued applause brought him back on the platform, where he gracefully complied with the request, and gave some more vocal music in a very comic manner. This was followed by a piano duet on two grand pianos—fantasia, "Norma," by Mr. and Mrs. Mansfeldt. This was a splendid performance, heartily enjoyed by all lovers of music who were present. It is not often one has the opportunity to hear two such thorough musicians; and indeed, as professionals, they were very kind to appear. They can, at least, rest assured their courtesy was appreciated, and their performance was re-received with hearty acknowledgment. Mr. H. B. Pasmore rendered pleasantly the old English song "Who Deeply Drink of Wine." This was followed by little Katie Cohen in a recitation, and, being encored, she gave another short recitation on the rights of boys and girls, very prettily. Gus Trost and F. Boquet played a very sweet duet on zithers, showing skill with the instruments and feeling and expression in rendering the music. The performance closed with the patriotic hymn "America," by the audience, accompanied by Mr. Pasmore on the organ.

The entertainment was a success in every particular and reflected great credit on the Committee of Arrangements of the Lodge, which consisted of J. W. Nelson, M. M.; H. Menges, G. F.; W. Kilpatrick, O.; Chas. E. Alden, D. G. M. W.; A. T. Dewey, P. M. W. Bro. Benner assisted the committee by beautifully and tastefully decorating the platform with pots and vases of living flowers. Bros. Gay, Thorne, Morton, Highland, and others, also kindly assisted.

The gentleman to whom this complimentary entertainment was tendered, Dr. Williams, is a man of talent and standing, who has been severely afflicted for many months. To all his friends the announcement that he will be restored to health and practice again before long is gratifying. Our readers will remember that not long since we gave a description and engraving of the electrical apparatus devised by the doctor, which is probably the most complete apparatus of the kind ever invented.

An Incident.

After the entertainment, and when the hall was nearly deserted, a Workman, good and true, modestly inquired of one of the committee when the A. O. U. W. met in Oakland. He was told that Keystone No. 64 met on Tuesday, and remarked: "I belong to Hearts of Oak Lodge, but am now residing at a distance, and have come 20 miles to attend this affair. I wanted to hear and see the Grand Master!" His pleasant criticisms and remarks showed he was not sorry for the trouble he had been at. The Lodge he belonged to is well named if there are many more such brothers, and the Grand Master ought to feel complimented that he is in such high standing and so well appreciated.

PROCEEDS OF THE CONCERT.—The sum of $112, net, had been received on Tuesday night to go to Dr. Williams from the Keystone Lodge entertainment. At that time there were more tickets to hear from.

HIGUERA LODGE, No. 194, at San Luis Obispo, has, by resolution of the Lodge, at the suggestion of Dr. G. B. Nichols, P. M. W., made the second Lodge meeting in each month a social feature of the city. After the business of the Lodge is finished, the families of the brethren and invited guests will have an evening devoted to sociality, literary and musical exercises.

HOT coffee and ice water free to all on board the train from San Jose to Monterey, on Tuesday, the 16th inst. This excursion promises to be one of the grand events of the season. Special privileges have been granted at the Hotel del Monte.

THE Order is booming in Kansas, with no deaths reported as occurring since March 8th. We have nearly 3,600 members in good standing.

THE selection of Belmont as the place for holding our annual picnic is meeting with general satisfaction. Covered coaches and drawing-room cars will be provided for all that may wish to go. Every precaution will be taken to avoid accidents, and trains will be run to and from the grounds frequently all day.

THE brethren of Oak Grove Lodge, at Oakdale, will hold an open meeting on the 26th inst. These gatherings, where the families and neighbors join, are a commendable feature, and help to build up and strengthen our Order.

MONTEREY LODGE, No. 98, will celebrate their anniversary on Tuesday, the 23d, by a short musical and literary entertainment, with an address by Wm. H. Barnes, G. M. W., concluding with terpsichorean exercises and a banquet. We hope to be with them.

THE various committees having in charge the picnic have each worked hard, and deserve what they will receive—a handsome reward for their generous efforts in behalf of a much-needed organization.

WE met Bro. Jas. T. Ish, Foreman of Amador Lodge, 133, in Burns Lodge, at its last meeting. He says the mountain towns are alive and enthusiastic as Workmen.

THE Directors of the Hibernia Bank reduced the rate of interest on loans to 6% per annum, the bank paying the mortgage tax. This tax this year will amount to about 2¼%, so that really the bank is letting its money at the rate of 3¾ % per annum. This rate would not be a high interest return in Europe.

THE Pacific coast *Dental Jarius*, published by Bro. W. O. Thrailkill, D. D. S. of Oakland, is a valuable and well-edited monthly journal. Bro. T., as a skillful operator in dentistry, stands at the head of the profession.

GRAND MASTER BARNES will deliver the oration at the picnic of the General Relief Committee.

A STATE commissioner of life insurance said: "'Receivership' but half covers the case. We need a new word that shall signify both to receive and devour."

PENNSYLVANIA has levied assessments 7 and 8 for May.

ON the *qui vive*. Much is expected of Bro. Severance's poem on the occasion of the picnic, and, judging from the magnificent effort accomplished by the same brother at the Maine reunion, a few days since, none will be disappointed.

THE past year has been the most successful one our Order has experienced in California. The increase in membership has been very large, and it seems of a very good quality. Prosperity and good spirits prevail, and it is a source of congratulation to know that so many other sections share with California in this prosperity and good feeling. San Francisco has 23 A. O. U. W. Lodges, with a membership of about 4,000, and is now considering the expediency of building headquarters for the Order, to contain halls, reading rooms, library, committee rooms, etc.—*Wisconsin Advocate.*

PICNIC TRAINS will leave the corner of Fourth and Townsend, and stop at Valencia-street station, going and returning.

THE A. O. U. W. has a lofty mission—to disperse the gloom and bring gladness and plenty to homes that have just been darkened by the shadow of the angel of death, which might have become the abodes of misery, desolation and want. Let each brother consider, as he gives his dollar, that it is for sweet charity, and as he is doing unto others, even so will his loved ones be done by, after he has ceased to be with them.—*Protector.*

A NUMBER of our brethren from different parts of the State will be in attendance at the picnic.

THE excursion season on the Pacific coast promises to be well patronized by the A. O. U. W. Would that we in Wisconsin could imbibe the spirit which pervades our brethren of the far West, who are enjoying a constant round of social and intellectual feasting.—*Wisconsin Advocate.*

MUSIC will be furnished by the Second Regiment band for the A. O. U. W. picnic.

READER, you too must die. God forbid that this call for you to provide the pittance our noble Order begs you to take in the name of your loved ones shall add to the bitter cup procrastination provides for the hour of dissolution.

PAST MASTER E. M. READING, of Fidelity Lodge, No. 136, will be President of the Day at the Grand Relief Committee's picnic.

THE Grand Lodge of Massachusetts, by vote, placed 1,000 copies of the *New England Workman* at the disposal of the Grand Master Workman, monthly.

HO, FOR BELMONT!—The grandest affair of the season will be the A. O. U. W. picnic on the 17th inst. Every Workman should go and take all his family.

THE subject of Lodge attendance is exciting considerable talk and much theory, and we hope a revival of interest in the sessions will be created.

DON'T you forget it. The picnic under the auspices of the General Relief Committee will be one of the grandest affairs of the season.

H. Schellhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

THE RIGHT KIND OF A MAN.—The man who can stand in the breach of universal public censure, with all the fashions of opinion disgracing him in the thoughts of the lookers-on, with the tide of obloquy beating against his breast, and the fingers of the mighty, combined many pointing him to scorn—nay, with the fury of a drunken rabble threatening him with instant death—and worse than all, having no present friend to whisper a word of defense or palliation in his behalf to his revilers, but bravely giving his naked head to the storm, because he knows himself to be virtuous in his purpose—that man shall come forth from the fiery ordeal like tried gold; philosophy shall embalm his name in her richest unction; history shall give him a place on her brightest page, and old, yes hoary, far-off posterity shall remember him as of yesterday.

GREAT ENTERPRISES.—This is an age of great enterprises. A railroad is projected, at present on paper, from Jersey City to San Francisco. Capital, $150,000,000. Another company proposes to build a double-track from Jersey City to Washington. Another project contemplates furnishing a dozen Eastern cities with gas light from the mines. An irrepressible enthusiast proposes to bridge the Delaware at Philadelphia with a $4,000,000 bridge. It must be admitted, however, that the accumulation of wealth is so rapid that such enterprises may become practicable much sooner than old-time methods of calculation would admit of. Enterprises pushed to successful completion within five years would have been laughed down as chimerical 20 years ago.

UNCONSCIOUS NERVE FORCE.—In his "Diseases of Memory," Ribot says: "When a child learns to write, according to Lewes, it is impossible for him to use his hand alone; he must also move his tongue, the facial muscles, and perhaps his feet. In time he is able to suppress these useless discharges of nerve force. And so, when we attempt for the first time any muscular act, we expend a great quantity of superfluous energy which we learn gradually to subdue. By exercise certain movements are fixed, to the exclusion of others."

LAST week 20,000 salmon eggs were shipped from the McCloud fishery to parties in the East.

SEVENTY thousand emigrants arrived in New York during April.

California Lands.

Mr. Street, Land Officer of the California Immigration Society, in his monthly report to the Board of Directors of the association, made the following statement relative to the present disposition of the agricultural lands of the State:

"The total area of the State is 100,000,000 acres, a portion of which has been disposed of in round figures, approximating as follows:"

	Acres.
Belonging to or claimed by railroads, about	25,000,000
Private grants	8,000,000
Indian and Military reservations	300,000
To the State for educational and other purposes,	6,500,000
Lakes, bays, navigable rivers and islands	1,500,000
Swamps and overflowed	1,700,000
Salt marsh and tide lands	100,000
Grand Total	43,000,000

Besides there was a vast amount sold for cash, and disposed of under the pre-emption, homestead and other laws of the United States, certainly amounting in the aggregate to several millions of acres.

A BIG DAY'S CUTTING.—The Port Blakely mill, at Port Blakely, W. T., owned by Renton, Holmes & Co., on last Saturday, in 12 successive hours, cut 190,000 ft. of merchantable lumber, and during the week closing with that day cut 1,000,000 ft. This is the largest cut in one day at any one mill west of the Mississippi. The proprietors of this and other mills along the sound complain of the scarcity of mill hands.

NEW ORLEANS has got its five miles of river front illuminated by 104 electric lights, and hopes to stop the pilfering of goods piled there; as well as to facilitate work by their means. The city has, in all, over 300 lights of the kind in use.

RAILWAY WEAR AND TEAR.—A curious fact was lately mentioned by Mr. F. W. Webb, President of the Manchester Association of Employers, etc. The Northwestern railway company, he stated, used steel rails, and yet the wear under the ordinary traffic of the road was so great that one-third of a pound of steel was lost on every mile run, or, 1,500 lbs. every hour of the day. The collective wear of the locomotive engines, of which there are 1,679, was such that a new engine was required to be put to in the traffic once in five days.

OXYGEN AND CONSCIOUSNESS.—Brown-Sequard, according to Dr. Luys, once injected the head of a dog, when separated from the trunk, with defibrinated and oxygenated blood, and at the moment when the injection of this blood had recalled the manifestations of life he called the dog by his name. The eyes of the head thus separated from the trunk turned toward him, as if the voice of the master had still been heard and recognized.

A PLEASANT MOUTH DISINFECTANT.—Hypermangate of potassa and hyperoxydate of barium, of each 24 grains, to be rubbed up into a mass, with sugar and glycerin, and divided into 144 lozenges. Every ill-smelling mouth will become by their use perfectly odorless.—*Medical Record.*

A LITTLE girl nine years old, having attended a soiree, being asked by her mother on returning how she enjoyed herself, answered, "I am full of happiness; I couldn't be any happier unless I could grow."

A YOUNG lady who didn't admire the custom in vogue among her sisters of writing a letter and then cross-writing it to illegibility, said she would prefer her epistles "without an overskirt." Sensible.

THE Board of Trade has adopted and transmitted to Washington a resolution urging Congress to take action towards preserving the navigation of the Sacramento river and the bay of San Francisco.

A YOUNG man who was presented with 11 Queen Anne penwipers on Christmas day by his lady friends, continues to wipe his pen on his coat tail.

PRINTED WORDS VITIATE AN OLOGRAPHIC WILL.—W. E. Milford wrote a will which doubtless he firmly believed would stand the strongest test; but, as the law in this State provides that an olographic will must be wholly in the handwriting of the testator, and as, unfortunately, in the will in question, the date line was printed, Judge Finn was compelled to declare the document invalid. It was consequently found necessary to fall back upon a former will executed at Paris some years ago. The executors of the will, one of whom is at Paris and the other Rio Janeiro, have sent by cable a renunciation of their trust, and letters testamentary, with the wills annexed, have been granted to the widow.

SOME 5,000 of the Hebrew refugees from Russia will probably be located in Montana, on the rich bottom lands between Miles City and Glendive. Each family will take a small farm, and will be furnished with enough money to put up a house and buy one year's provisions.

COINAGE at the United States mint, in Philadelphia, during April, aggregated 4,481,000 pieces, valued at $6,057,300, and made up of 315,000 eagles, 422,000 half eagles, 500,000,000 silver dollars, 433,000 five cent pieces, and 2,500,000 cents.

THE last incoming French steamer brought a numerous party of Frenchmen, who were under contract to proceed to the vine-growing districts of California, where full employment, at good wages, is guaranteed them. Protection gets encouragement from immigration.—*Philadelphia Press, 23d ult.*

A REAL estate agent in Chicago says: "There are no cheap houses being built now. Capitalists will not put their money into little cheap cottages while there are no laws for getting possession from non-paying tenants."

A CHICAGO jury has awarded $3,500 to a tenant whose family was made ill by sewer gas, the landlord having represented that the plumbing was perfect.

THE assessment on the broad gauge railway tracks in Colorado amounts to $8,250,000, and the narrow gauge to nearly $7,300,000.

Principal and Interest.

"Oh, mother, mother, I am so tired!"

"Cheer up, my child, we have not very far to go. Come closer; let me brush the dew from your curls. Now take my hand."

But the child hung back, sobbing with weariness and exhaustion, and the pale young mother, bending over her in the vain attempt to soothe the hysterical excitement, did not hear the rumble of advancing wheels until they passed close to her, and a rough, hearty voice exclaimed:

"What ails the little girl? Ain't sick, is she?"

Mary Ellsworth had never seen Farmer Raynesford before; yet the moment her eyes rested on his wrinkled, sun-burned face, with the shaggy brows overshadowing kind eyes, she felt that he was a friend, and made answer promptly:

"Not sick, sir, but very tired. We have walked a long way."

"Got much farther to go?" asked the farmer, ticking the horse's ear with the end of his whip.

"To Breckton."

Mr. Raynesford gave a low whistle.

"That's four miles off, and the little gal is pretty nigh used up already."

"I know it," said the woman, with a sigh, "but I have no money to hire a lodging nearer. In Breckton I hope to obtain work in the factory."

Farmer Raynesford gave the seat of his wagon a thump with his whip-handle that made old Bonney drop the mouthful of clover he was nibbling from the roadside, and prick up his ears in astonishment.

"I won't hear to no such thing!" said he, energetically. "Why, that child can't go 20 rods farther! Here, get in along with me. You won't be none the worse for a bit of supper and a good night's rest. I know Hannah'll scold," he muttered, as he lifted the little girl to his side, and extended his hand to the mother; "but I can't see folks perishin' by the wayside, and never offer to help 'em. Don't care if she scolds the roof of the house off."

He drove rapidly along, making occasional interjectional remarks to his horse, while Mrs. Ellsworth drew her thin shawl around the little golden head 'that already dropped drowsily upon her shoulder, and thought with a deep sensation of gratitude upon the shelter Heaven had provided her in her sorest strait.

It was an odd-shaped old farm-house, gray with the storms of nearly half a century, with a broad door in one end, overhung by giant lilac bushes, and a kitchen where, even in the bloomy month of June, a great fire roared up the wide-throated chimney, and shining rows of tins winked and glittered at every upward leap of the flames.

Mr. Raynesford jumped out of the wagon, threw the reins over a post, and went in to conteilite his domestic despot.

"aLook here, Hannah," said he, to a tall, angular-looking female who emerged from a pantry near by, her face nearly or quite as sour as the saucer of pickles she was carrying. "Jest set a couple more plates on the table, will you? I've brought home a woman and a little gal I found a piece below, e'en almost tired to death. They was calculatin' to walk on to Breckton, but I thought it wouldn't hurt us to keep 'em over night."

"I'm astonished at you, Job Raynesford," said his better half, in a tone of indignant remonstrance. "We might just as well hang out a tavern sign at once, and done with it; you're always bringing home some poor, miserable creetur or other, and"—

"There, there, Hannah," interrupted Mr. Raynesford, "I'm always willin' to hear to you when you're anyway reasonable, but it goes clear agin my grain to see poor folks a sufferin' and never stretch out a helpin' hand. 'Taint Scriptur', nor 'taint human natur'."

"Well, go your own gait, Job Raynesford," responded his wife, tartly. "Only mark my words, if you don't end your days in the poor-house, 'twont be through no fault o' yourn!"

She shut the pantry door with a bang that made all the jelly cups and milk pans rattle, while Job, with an odd grimace, went out to help his guests to alight.

"Don't mind my old woman," said he, apologetically, as Mrs. Ellsworth sprang to the ground "She's kind o' sharp spoken, but she means well after all. We ain't all just alike in our notions, you know."

"If all the world were like you, sir," said the young widow, with tears in her eyes, "there would be less want and suffering, by far."

Farmer Raynesford pretended not to hear; he was busy lifting little Mary out.

"Set on them blackberries, Hannah," said he, toward the close of their evening meal; "the little gal's so tired she can't eat nothin' solid."

"I was calculating to keep the blackberries for the donation party to-morrow," said Mrs. Raynesford, rising with rather an unwilling air.

"Nonsense," quoth the farmer, with a broad laugh, "I'm having a donation party of my own to-night. Here, little one, see if those berries don't put some color into your cheeks."

All the evening little Mary sat by the hearth, with her hand in her mother's and her large blue eyes fixed earnestly upon the kind farmer's face.

"What are you thinking about, dearest?" asked Mrs. Ellsworth once. She drew a long sigh and whispered:

"Oh, mamma, he is so kind to us!"

When Mary Ellsworth and her little girl set out next morning upon their long walk to Breckton, Job Raynesford went with them to the gate, fumbling uneasily in his pocket and glancing guitily around to make sure that Hannah was not within seeing distance. When Mary extended her hand to say good-by, to her astonishment a bank bill was thrust into it.

"Don't say nothin'," muttered Job, with a sheepish air. "Ten dollars ain't much to me, and if you don't chance to get work in the factory right away it may be a good deal of use to you. Needn't thank me—you're as welcome as the flowers in May."

He bent over to kiss the child's fair forehead, and stood watching them until the two slight figures disappeared, and only the golden sky and moving crests of summer woods remained.

"Ten dollars!" ejaculated Mrs. Raynesford, who had witnessed this little episode from behind the curtains of her milk-room window. "Is Job Raynesford crazy? To give $10 to a poor, strolling vagrant! If he don't get a piece of my mind—"

And she hastened out, her cap border fairly standing on end with horror. Job awaited the coming tempest with philosophic coolness, his hands in his pockets, and his lips parted in a good-natured smile. It was not the first piece of Mrs. Hannah's "mind" that had been bestowed upon him, nor did he suppose it was likely to be the last.

"She means well," he said to himself, when the volley of wrath had been discharged on his luckless head, and Mrs. Raynesford had returned to her butter-making, "but she's got the greatest faculties for scolding of any woman I ever saw!"

The years flitted by, sprinkling the steep old farmhouse with crystal drops of April showers, and thatching it with the dazzling ermine of January snows, many and many a time. Gray hairs crept in among the raven locks of Farmer Raynesford, the careworn wrinkles began to gather around his mouth and brow. Alas! those swift-footed years brought troubles innumerable to the kind old man.

"Twenty years!" mused he, one bright June morning. "It don't seem possible, Hannah, that it was 20 years ago this very day that I caught that ugly fall from the hay-rack, and got lame for life."

He looked down at the crutches by his side as he spoke, and sighed from the very bottom of his heart.

Hannah stood in the doorway, tossing corn to a forlorn little colony of chickens. Twenty years had not improved her in any respect—she was gauntier, bonier and more vinegar-faced than ever.

"Yes," said she, slowly, "and perhaps you don't remember that it was just 20 years ago to-day that you threw $10 away on that woman and her child. I told you that you'd end your days in the poor-house, and I don't see but what my prediction is likely to come true. Didn't I say you would live to repent it?"

"I won't deny, Hannah, said the old man," "but that I've done a good many things I've been sorry for—we ain't none of us perfect, you know, wife—but that is not one of them. No, I never for a moment repented being kind to the widow and fatherless."

Hannah shrugged her shoulders, but made no reply.

"Didn't you say you were going up to see the rich lawyer about the $5,000 to-day?" she asked, presently.

"Yes, but I don't suppose it'll be much use. If he'd wait a little, I'd do my best to please him. Jones says he'll be sure to sell the old place from over our heads, however; they tell me he's a hard man. I mean to explain to him just how the matter stands—"

"I told you how it would be long ago!" ejaculated Hannah, unable to restrain her vexation. "What on earth ever possessed you to sign for Jesse Fairweather?"

"I s'posed he was an honest man, and I wouldn't see an old friend wronged."

"Fiddlesticks!" exclaimed Mrs. Raynesford. "That's just your calculation, Job! There—Zeke has brought the wagon; do start off or you'll be late for the York train."

And Job meekly obeyed, only too happy to escape from the endless discord of his wife's rolling tongue.

The rays of the noonday sun streamed brightly through the stained glass casements of Mr. Everleigh's Gothic library. The room was decorated with appurtenances of wealth and taste. Velvet chairs, with tall backs of daintily carved rosewood, were scattered here and there; marble vases occupied niches beside the doorway, and the rarest pictures hung on the paneled and gilded wall. But the prettiest object of all—the one which the rich lawyer oftenest raised his eyes from the writing to contemplate with an involuntary smile of pride and affection—was a lovely woman in a white cashmere morning robe, trimmed with velvet, who stood opposite arranging flowers in a bouquet. She wore a spray of berries, carved of pink Neapolitan coral, at her throat, and tiny pendants of the same rare stone in her shell-like ears, and the slender waist was tied around with a pink ribbon.

"There, Walter, isn't that pretty?" she asked, holding up her completed bouquet.

"Very pretty," he answered, looking not at the roses or geraniums, but directly at the blue eyes and golden curls of his beautiful young wife.

"You are not even noticing it," she pouted.

"Because I see something so much better worth looking at," he said, playfully.

"Do you really love me so very much?" she asked, throwing down the flowers and coming around to his side.

He rose and drew her caressingly toward him.

"My dearest, you are more precious to me than the whole world besides!"

She let her head rest for a moment on his shoulder, and when she raised it there was a tear on her eyelashes.

"Oh, Walter, if mamma could only see how happy we are!"

There was a knock at the door. Mrs. Everleigh slipped from her husband's arm with the prettiest blush in the world, and was very busy with her flowers when the rich lawyer's "right hand man" put his grizzled head into the room.

"The old man wants to see you about that Fairweather business."

"Show him in. Don't look so disappointed love," he said, as the grizzled head disappeared. "I shall not be detained three minutes, and the horses are at the door."

Mary Everleigh never troubled her pretty little head about business matters, so she never looked up as the halting sound of old Mr. Raynesford's crutch echoed on the carpet. But the instant he spoke she started as if an arrow had smitten her, and her slender hands clasped together, listening as intently as though her life depended on hearing every word. The old man was pleading, and sorrowful—her husband politely inflexible. At length Job Raynesford turned to go.

"Well, sir," he said, in a subdued tone, "I don't know much about law and law books, but it does seem hard that an old man should be turned out of the home that has sheltered him for 60 years, and all for no fault of his own. They say that you are a very rich gentleman, sir; five thousand dollars may seem a small sum to you, but it is my all."

Mrs. Everleigh's soft voice broke the momentary silence that succeeded this appeal.

"Walter, come here one minute—I want to speak to you."

He obeyed, somewhat surprised; she drew him into a deep recess of stained glass window, and standing there with the rosy and amber shadows playing about her lovely brow, like some fair pictured saint, she told him how 20 years ago a weary child and its mother were fed and sheltered by a kind-hearted stranger; how he had given them money and kind wishes, when they were utterly alone and desolate in the wide world.

"But, my love, what has this to do with my business matters?"

"Much, Walter! I am that little child!"

"You, my dearest?"

"I, my husband, and the noble man who, I am persuaded, saved my life that night, stands yonder, with gray, bowed head and sinking heart!"

"Mary, you must surely be mistaken."

"I cannot be mistaken, Walter. I should know him among a thousand. You said you loved me this morning—now grant me one little boon?"

"What is it dearest?"

"Give me that note he spoke of."

Mr. Everleigh silently went to a small ebony cabinet, unlocked it, and drew out a folded paper, which he placed in her hands. She glided up to the old man, who had been gazing out of a window in a sort of reverie, and laid her soft hand on his arm.

"Do you remember that little golden-haired Mary whom you found with her mother, wearied out on the roadside, 20 years ago?"

"Do I remember her, lady? It was but this very morning I was recalling the whole scene."

"And don't you recognize me?" she said, smiling up into his face, as she drew back the drooping curls. "I am little Mary!"

He stood in bewildered silence. All of a sudden the truth seemed to break upon him, and he laid his hand upon her head with a tearful blessing.

"And your mother, my child?"

"She has been dead for years; but it is my dearest task to be the instrument of her gratitude. Here is the note you indorsed; my husband has given it to me. See!"

A small lamp was burning in one of the niches; she held the bit of paper over the flame until it fell a cloud of light ashes upon the floor.

"Well!"

Mrs. Raynesford met her husband at the door the instant his crutches sounded on the little graveled path.

"Why don't you speak? Of course I know you've nothing but bad news to tell, but I may as well hear it at once. Have you seen the gentleman? What did he say?"

"Hannah," said old Job Raynesford, slowly folding up his gloves, "do you remember the $10 I gave that poor young wanderer a score years ago to-day?"

"Why, of course I do. Didn't I remind you of it not 12 hours ago? What has that to do with our troubles, pray?"

"Just this—to-day I received payment, principal and interest!"

"What do you mean, Job Raynesford?"

"The little golden-haired child that sat beside our hearthstone that June evening is Lawyer Everleigh's wife, and I have seen her burn the note that has hung like a mill-stone around my neck for many years. She said it was but paying a sacred debt of gratitude; but heaven knows I looked for no such reward."

There was a moment's silence. The old man was pondering over the past, and Mrs. Raynesford was so taken by surprise that she really could not say anything.

"And now, wife, what have you to say about my financial mistakes?" said Job, archly.

Mrs. Raynesford had no argument suited to the emergencies of the case, and she wisely said—nothing.

GAS WORKS AS HEALTH RESORTS.—A few years ago there was quite a mania for frequenting gas works among persons afflicted with any sort of pulmonary disease, particularly bronchial troubles, asthma, chronic bronchitis, etc. The odors always present in the vicinity of these establishments was also recommended for whooping-cough. An eminent French physician has been investigating the matter in a common-sense manner, and reports that animals subjected for some time to the odors referred to, in the purifying chambers of gas works, were found after death to have their lungs filled with tubercles. This is certainly not a very powerful argument in favor of gas works as health resorts. We cannot recommend them, notwithstanding the opinions of an esteemed correspondent.—*Good Health.*

ASSASSINATION IN IRELAND.—A profound sensation has been caused by the murder of Lord Cavendish and Under Secretary Burke, in Dublin last week. Gladstone had resolved upon a new policy toward Ireland, had released Parnell and others of the Land League and had appointed Lord Frederick Cavendish as Secretary to carry out the milder policy which had been determined upon. The cold blooded murder of this man who went bearing the olive branch is most rigorously denounced by all true Irishmen, and the cause of Ireland is injured by the deplorable occurrence. The assassins have not been found and it is not known who inspired the deed.

ABOUT 3,000,000 Jews live under the government of the Czar, and it is said that "America" is the word oftenest on their tongues. This is the Promised Land to which they look forward, and a plan is on foot to bring 10,000 more of them to this country this year.

A Quarter's Trademarks.

The following communication from the Secretary of State gives full details of trademarks registered in this State during the quarter ending March 31, 1882:

January 4.—James H. Cain, San Francisco; the words "West Coast Mills."

January 6.—Davis Brothers, San Francisco; the words "Golden Rule Bazaar."

January 11.—H. H Moore, Stockton; "H. H. H. Hoof & Healing Ointment," "H. H. H. Condition Powders."

January 11.—Olcovich Brothers, San Francisco; "Choice Natural Leaf Japan Oolong."

January 16.—Macondray & Co., San Francisco; "Golden Seal."

January 17.—M. Ehrman & Co., San Francisco; "The Bonanza Wax Mining Candles."

January 18.—Lindley & Co., Sacramento; "L & Co." in circles, and the word "Capital."

January 23.—Bothin, Dallemand & Co., San Francisco; "Silver Spoon Baking Powder."

January 24.—J. A. Folger & Co., San Francisco, filed six trade-marks: 1. "Banner Japan Tea;" 2. "Steamer Japan Tea;" 3. "Golden Gate Yeast or Baking Powder"; 4. "Golden Gate Cream Tartar;" 5. "Gold n Gate Saleratus;" 6. "Golden Gate Bi-Carb Soda."

January 24.—A. O. Cook, San Francisco; of an "Arrow."

January 25.—Frank Sciaroni, St. Helena; "St. Helena Sherry House."

January 31.—J. S. Williams, Modesto; "The Boss Squirrel Poison."

February 2.—A. J. Pierce, Point Reyes, Marin County "Tomales Point S. P. Dairy."

February 4.—L. & E. Wertheimer, San Francisco and New York, "Creole."

February 7.—Mohn & York Sacramento; "Eureka."

February 8.—Capitol Packing Co., Sacramento; "Capitol."

February 11.—C. McCreary & Co., Sacramento; "Patent Roller Flour."

February 13.—H. Newmark & Co., Los Angeles; for oysters the word "Select."

February 14.—John S. Bowman & Co., San Francisco; for cigars the words "Captain DeLong."

February 18.—Plummer Brothers, Newark, Alameda County; "Plummer's Crystal Salt."

February 20.—Edwin W. Joy; San Francisco; "Joy's Emulsion of Cod Liver Oil."

February 28.—Boot & Shoe Makers' White Labor League San Francisco filed their name as a trade-mark.

February 28.—A. Schilling & Co., San Francisco filed four trade marks for Japan Tea: 1. "Treasure;" 2. "Epicure;". 3. "Purity;" 4. "Boquet."

March 1.—Main & Winchester, San Francisco; "their name in connection with a Horse Shoe."

March 6.—Harrison & Evans, Ione City; for flour, "Moline Mills."

March 7.—M. Wertheimer & Brother, San Francisco; the word "Calcutta."

March 8.—Franco-California Packing Co., San Francisco, the word "Asparagus."

March 9.—Neustadter Brothers San Francisco; "Union Pacific."

March 20.—Newmark, Gruenberg & Co., San Francisco; "Old Judge Kentucky Bourbon."

March 25.—Michalitschke Brothers & Co., San Francisco; the word "Unit."

March 27.—Smith, Lucy & Co., San Francisco; for Chemical Olive Soaps, "their name in connection with A & B."

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the WATCHMAN'S progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tel whether the WATCHMAN has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the WATCHMAN family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the WATCHMAN.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

THE Standard Soap Co., under the management of Bro. J. J. Applegate, is one of the industries of California of which we may be proud. The variety, excellence and standard worth of their soaps for toilet or domestic use place them in the very front rank, not only in this State, but of any in the United States. The Standard soap palace, at 637 Market street, is one of the attractions for the ladies. Toilet soap that will cure skin diseases, and soap that will preserve healthy skin, can be procured here, as also that for kitchen, laundry and household use.

ELECTRIC LIGHT ON THE EYES.—The brilliant light of the electric arc is found to be much less dangerous to the eyes than was for some time believed. So high a medical authority as the London *Lancet* reports that but one case of serious injury from exposure to the dazzling light has come under its notice, and in that instance the exposure was unusually severe and prolonged.

THE YOSEMITE HOUSE, leading hotel of the city of Stockton, and general ticket office for the Big Trees, Yosemite valley, Bodie, and for all mountain towns, has been thoroughly renovated and put in order to receive tourists and summer guests. Mr. James Caven, the well-known, popular landlord, with his able corps of assistants, is making the Yosemite at Stockton more popular than ever.

ACCORDING to the Yazoo, Miss., *Sentinel*, many planters say they would not part with the advantage the overflow will be to their lands for a nice little sum of money. The sediment deposited by the flood will do the soil more good than any fertilizer that could be applied. One planter says the cotton lands will now be worth from $4 to $5 more per acre than formerly.

BRO. J. D. CROSS, of the Mansion House, has connected with the house a first-class restaurant under the charge Mitrovich Bros., formerly of the Independent restaurant of Stockton. This new department is meeting with favor in Stockton and the Mansion House is crowded with guests. Board by the day or week if desired.

THE new Workmen diploma, a notice of which appeared in our last issue, is meeting with much favor. The publisher, Bro. C. H. M. Curry, is receiving orders far beyond his expectation. It is pronounced one of the finest works of art that has yet been issued in this State.

THE Philadelphia *Times* voices the thoughts of a great many other people when it says: "It should be understood henceforward that people who wish to fool around in the Arctic ocean, must do so not only at their own expense, but at their own risk."

IF you wish to wear the greatest invention of the age in the shoe line, get a pair of Bro. P. Kelly's patent boot and shoe combined. He also manufactures ladies' fine shoes. Call at 228 Kearny street.

NELSON & PETERSON are a new and enterprising firm, engaged in the wholesale trade in canned goods, fruit extracts for culinary use, etc. No. 504 Front street, S. F. Give them a call in their line.

H. MENGES (G. F. of 64), has his tonsorial establishment at No. 454 Eighth street (next to Contra Costa Water Co.'s office). Remember his headquarters in Oakland.

Aims, Objects and Regulations of the Ancient Order of United Workmen.

The Ancient Order of United Workmen is a general organization for the mutual benefit of its members and their families. It embraces in its membership men of every vocation, profession and occupation—employers and employees—workers of all classes, whether their labor be mental or physical. It has no connection with any religious sect, political party, or organization for affecting the prices of labor or commodities, but is designed to promote fraternity, mental and social improvement, and mutual assistance.

BENEFICIARY FUND.

The most distinctive feature of the Order is what is designated as the Beneficiary Fund—a carefully-devised, well-guarded, economical and beneficial system, by means of which the sum of

TWO THOUSAND DOLLARS

Is secured to each member's family, or such person or persons as he may choose to designate. During the several years since the Order has been established this sum has been promptly paid in full in each case of death, to the persons entitled to receive it, within a few weeks, and without any litigation or troublesome formalities. A careful examination of the working of the system will satisfy any intelligent person that such will continue to be the case.

HOW ASSESSMENTS ARE PAID.

Each person who becomes a member of the Order pays to the Receiver of his Lodge one dollar for the Beneficiary Fund. Every Lodge has on hand, at the beginning of the month, ready for a call, one dollar of Beneficiary Fund for each member. When a death occurs, if there is a sufficient amount of the Fund in the Grand Lodge to meet the required payment of $2,000, no call is made upon the Subordinate Lodges, but if there is not a sufficient surplus from the last assessment, then the Lodges are notified at the first of the month to forward their portion of the Fund on hand ($1 for each member), and an assessment is made to replace the amount forwarded. By this means the Beneficiary Fund of the Lodge is again replenished, ready for a call at the first of the next month, if it should be made. Assessments are only made on the members at the first meeting night in each month, and a written and printed notice is sent to each member, bearing date of such meeting night. Twenty days time is given from that date to meet the payment. Thus the payments are made at such intervals, and are called for in such manner that they may be easily provided for and met without inconvenience even by persons of small income.

HOW MUCH DOES IT COST?

In the first year of the working of the Supreme Lodge (1873-4), the number of assessments made upon the members of the Lodges directly under its jurisdiction, was 20; second year, 14; third year, 15; fourth year, 15; fifth year, 14; sixth year, 16. Since that time, the average has remained about the same, and these figures will also apply to the Jurisdiction of California. It is probable that the future average will remain about the same. The average cost to each member, therefore, has been $15.66 per year; being a little more than four cents per day as the cost of a completely-secured guarantee of $2,000, to be paid on the death of a member. Can any man who is in circumstances to avail himself of this system be justifiable in neglecting to give to his family the security which it affords? Does not prudence and affection dictate that he should secure for them the protection thus offered? A number of States, having over 2,000 members in each, collect and disburse the Beneficiary Fund separately through their Grand Lodges, instead of through the Supreme Lodge. In these, the cost per year has been, in some cases less and in others greater than that given above, but the average has been about the same.

California was set apart as a separate Beneficiary Jurisdiction in July, 1878, and at the end of July, 1879, had levied and collected ten assessments for deaths occurring in the State, and for the months of August and September three more, making a total for 14 months of 13 assessments, or an average of a little less than 93 cents a month for each member. During 1880, 16 assessments were levied in California, and for 1881, it is estimated there will probably be 14 assessments.

ADVANTAGES OF THE SYSTEM.

The A. O. U. W. Beneficial system is simple, easily understood, economical in its workings, and in all its details comes under the direct observation and care of the members who meet weekly in their Lodges, where the business is transacted, and where they enjoy the advantages of social and fraternal intercourse, and of mental improvement. These Lodges are governed by officers regularly elected by the members—the financial affairs are under the proper guards and restrictions, and a careful system of checks prevents fraud or betrayal of trust.

PROTECTION AT NET COST.

All money paid on assessments for the Beneficiary Fund goes to the payment of death benefits without reduction even for expenses, these being provided for out of a General Fund raised in each Lodge. This fund is made up from initiation fees (usually about $15 for each member, with sometimes an advanced rate, according to age), and weekly dues of not less than 25 cents per month. The advantage which each member derives from the social, fraternal and educational features of the Order, and the good which is accomplished by it in these respects, afford a more than ample return for the sum he pays into the General Fund, which meets all the expenses of the Order, leaving the entire Beneficiary Fund intact for the beneficent purpose for which it is intended. There are no commissions, fees or salaries to be paid out of it, but the entire amount paid in goes to the widows, orphans and other heirs of deceased brethren. Thus the Beneficiary system may be fairly said to be carried on absolutely without any working expenses, and, at the same time, to be more closely under the observation of those interested in it, and more carefully guarded than any other method adopted for similar purposes.

REQUIREMENTS FOR ADMISSION.

A medical examination is required under such rules as are generally adopted by life insurance companies. The character of the applicant must also be investigated, and the Lodge pass upon his application by ballot. Persons between the ages of 21 and 50 only are admitted.

BENEFITS OF SICK OR DISABLED MEMBERS.

The payment of weekly sick benefits to members is a matter left to the control of each Subordinate Lodge. Some provide in their By-Laws for such benefits—others do not. If sick benefits are to be paid, the initiation fees and weekly dues are fixed at an amount sufficient to cover the expense—each Lodge having the power to fix the fees and dues at such sums (not below $15 for initiation and degrees, and $2 for Beneficiary Fund and certificate, and 25 cents per month for dues) as may be determined upon.

GENERAL FEATURES OF THE ORDER.

The A. O. U. W. is a secret Order, having two degrees, with appropriate initiation ceremonies. These are simple, but impressive. The teachings are calculated to strengthen the character and elevate the moral principles of the members.

The Order is composed of Subordinate Lodges, Grand Lodges and a Supreme Lodge. Subordinate Lodges in States or Territories where no Grand Lodge has been established, are under the immediate jurisdiction of and report to the Supreme Lodge, until a Grand Lodge is established.

When a Grand Lodge has over 2,000 members under its jurisdiction, it can be set apart as a separate Beneficiary district if desired. In this case the members are assessed for the deaths which occur within such district or jurisdiction, and the Grand Lodge collects the assessments and pays the death benefits under the laws and regulations adopted by the Supreme Lodge. The Grand Lodges of Pennsylvania, New York, Illinois, Iowa, Missouri, Minnesota, Tennessee, Indiana, Michigan, California, Wisconsin, Kansas, Oregon and Ontario have been thus set apart as to the Beneficiary Fund. In all other respects they remain integral parts of the Order.

PROGRESS OF THE ORDER.

The A. O. U. W. was started in Pennsylvania in 1868 but was not sufficiently established to pay the $2,000 benefit until 1873, from which time up to the 1st of January, 1880, the Grand Lodge of that State alone has paid over $546,000 of Beneficiary Fund.

The Supreme Lodge, up to June, 1881 had paid out $919,172.90 on deaths of members of Lodges under its immediate jurisdiction. The amount paid by the Order during the year 1880, was $1,305,887 00.

The membership reported on the first of March, 1881, was 97,179, with Grand Lodges established in the States of Pennsylvania, Ohio, Kentucky, Indiana, Iowa, New York, Illinois, Missouri, Minnesota, Wisconsin, Tennessee, Michigan, California, Georgia, Kansas, Ontario (Canada), Oregon and Washington Territories, Massachusetts, Nevada, and Subordinate Lodges in a number of other States. In all these States the Order is steadily and rapidly growing. With the increase already since the above date, it is safe to say that before the close of the year 1881 it will number over 125,000 members.

The Order was founded by a few earnest, honest men, for fraternal and beneficent purposes. Its sphere of usefulness has been enlarged, and it has been faithfully conducted as its founders designed it to be—not to subserve the selfish interest of a few, but for the mutual benefit of all. Thoughtful and prudent men join it because they can thus provide, without present embarrassment, for the contingencies arising from the uncertainties of life, and at the same time aid each other in mutual improvement and the elevation of humanity.

Further information cheerfully given by applying to H. G. PRATT, Grand Recorder, S. F., Cal.

Garey's Orange Culture.

* * * Mr. Garey's experience in orange culture in all its branches, his enthusiasm on the subject, and his fine judgment and natural adaptability, make him one of the most thorough teachers that those who are embarked in the industry could have. Besides, Mr. Garey is master of a very clear and pleasant diction, and handles his pen with a facility that gives his writings flow and attractiveness. The volume should have a wide circulation, and do good financially to its author as well as to orange-growers. We need not say that Mr. Rose's contribution in the appendix to the literature of the vineyard, will be read with interest and profit by all who wish light on a subject of the greatest importance to this section of the State.—*Los Angeles Daily Express.*

Price, postpaid, from PACIFIC RURAL PRESS office, $1

Pleasure in Recommending, Etc.

OAKDALE, Stanislaus Co., Cal., March 6, 1882

Messrs. Dewey & Co.—DEAR SIRS:—I hereby acknowledge receipt of patent with copies, for which please accept my sincere thanks. I shall take pleasure in recommending your agency when I have an opportunity.

Yours Truly, J. M. NELSON.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

BY TELEPHONE.—Subscribers, advertisers and other patrons of this office can address orders, or make appointments with the proprietors or agents by telephone, as we are connected with the central system in San Francisco.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in DEWEY & Co.'s SCIENTIFIC PRESS PATENT AGENCY, 252 Market St., S. F

FOR THE WEEK ENDING MAY 2, 1882.

257,273—RIDING SADDLE—Joseph Bassler, San Jose, Cal.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co. in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P OWEN—Santa Cruz county.
B. W. CROWELL, San Benito and Monterey counties.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
H. W. MILLER.

DO NOT DELAY.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.

J. H. CROSS, Proprietor.

A PUBLISHER WANTED.

A good printer, or a steady and able business man, with a good reputation and a little means, can purchase (at less than two-thirds its value) the whole or a part of a long and well-established and paying newspaper and job printing office, in one of the rising business centers of this State.

Principals only need apply, (and that soon) to DEWEY & CO., at the office of this paper.

P. S.—A first-class printer can secure a permanent situation by applying soon. Also, a steady country boy a situation as janitor.

Quarterly Coinage Statement.

The coinage of the four United States mints for the month of March embraced 1,211,400 gold pieces, 2,302,000 silver pieces and 2,815,300 nickel pieces. The total was 7,328,700 pieces of a value of $12,009,024. This is the largest amount of coin turned out by the mints in a long time, if not the largest amount ever made during a single month. The coinage of double eagles last month, though comparatively small, was actually larger than the combined amount for the previous two months. Eagles led last month in the gold coinage. All descriptions of coins now made by the Government, with the exception of the lowest three gold pieces, were executed last month. In February the whole list was represented for the first time in about a year. Following is a statement of the coinage of all the United States mints for March and for the quarter ending March 31, 1882:

	March.	Quarter.
Double eagles	$1,040,000	$1,986,500
Eagles	5,608,000	10,580,750
Half eagles	2,993,000	11,808,925
Quarter eagles	.....	63
Three dollars	.....	75
Dollars	.....	25
Standard dollars	2,300,500	6,900,500
Half dollars	250	350
Quarter dollars	125	175
Dimes	50	70
Five cents	36,155	112,290
Three cents	33	53
Cents	30,911	118,018
Totals	$12,009,024	$31,507,794

This amount is nearly as large as the coinage for 12 months a few years ago. The number of half eagles coined for the past quarter is probably larger than for any previous quarter. For general use this is the most convenient of all the gold coins, though in sections where metallic money is the dominant currency, as in California, bankers show a strong dislike to the multiplication of half eagles.

THE carpenters of Cincinnati have struck for 50 cents extra a day, and building has stopped.

NOVEL SURGERY.—An interesting surgical operation was recently performed in Philadelphia, which consisted in the dividing of the tendons of the third finger to give more perfect freedom in piano-playing. This operation is considered of great importance in a scientific point of view. It is well known that musicians have had difficulty in using the third finger with that freedom of force necessary for skillful operation on the piano. This is for the reason that the tendons connecting with the second and fourth fingers form over that of the third, and act as a martingale, restraining it. Professor Zickown, in his researches for a remedy for this difficulty, consulted Dr. Forbes, after having failed of encouragement from other eminent surgeons. Dr. Forbes confidently asserted that the remedy would follow an operation. The musician had in his employ a mulatto who was an expert in music, but who suffered the same difficulties that retarded others. This young man consented to have the operation performed. He was taken to the Jefferson medical college hospital. Two small incisions were made on the back of the left hand, on each side of the extension tendon, and the accessory tendon on each side was divided. The effect was electrical. The finger was at once released from its constraint and given equal facility of stroke with the others, and its strength was increased rather than impaired. It is asserted that the hand will be in no wise deformed by the operation, while the effect is that pupils in music who undergo the process will be in an instant advanced several years in power and facility of operation on the instrument. The colored boy will submit his other hand to the operation in a few days. The success is exciting very marked interest in musical and scientific circles here and elsewhere.

BARNUM'S receipts for six weeks at the Madison Square garden, New York, are reported at the enormous sum of $425,000. Rapid transit over the elevated railroads is credited with having made possible this phenomenal business.

CIRCULARS OF INFORMATION FOR INVENTORS SENT FREE ON APPLICATION.

GEO. H. STRONG. W. B. EWER. A. T. DEWEY.

CEMENTS.—The following observations upon cements may be found useful. It has been ascertained that cement that has been prepared by grinding with mill-stones has only half the firmness that it shows when ground in centrifugal machines. The difference is explained by the fact that the centrifugal mode of grinding yields a much more finely divided product, which increases the hardening quality of cement mixed with sand. Coarse sand gives the highest degree of solidity and firmness to cement. It is unnecessary, when coarse sand of one sized grain has been used with cement, to mix finer sand with it to fill up the interstices of the mixture, as other indifferent substances can be used with equally good results. Moist carbonic acid has been found to diminish the firmness of cement to a considerable degree, and in a short space of time. The great difficulty encountered in manufacturing marble imitations from cement, is to prevent the cracking of the latter. Cement cracks when it is made up with too much water. It then forms a vitreous crust, and is not homogeneous throughout its mass. By adding finelycrushed granite fragments to cement without sand, a material is obtained that has great hardness, and which is susceptible of taking a high polish.

LIME AND GERMINATION.—The fact that lime is essential to germination has been recently ful y confirmed by some interesting experiments made by Dr. Liebenberg, and which have recently been published in the journal of the Vienna Academy of Sciences. It appears that the seeds of many plants require the presence of lime in the soil during the germinating process, or the seedlings die for the want of it. It is shown also that many other plants do not fail to germinate freely and well without the presence of lime in the soil. Dr. Liebenberg also points out that plants which fail to grow through the absence of lime in the soil do not fail in consequence of the injurious effects of any other matters that may be present, but because lime is essential to their healthy growth.

BERTHS on the first-class transatlantic steamers from New York have nearly all been secured up to the 1st of July.

HOW TO TIGHTEN WAGON TIRES.—Apply some leather rings between the shoulders on the outer ends of the spokes and the corresponding portions of the felloes, which may be done as follows: Procure a number of small pieces of leather, from an inch and a half to two inches in diameter; with a sharp knife and a compass, or a cutting punch, make round holes in the center of these pieces, and make a straight cut from the hook to the outer edge of the pieces, so as to form open rings. The holes must be made of a size that will nicely fit the tenons on the out ends of the spokes. Place a fulorum on the top of the hub, on which place your lever, with the short end under the felloe, near a spoke; have an assistant bear down on the other end sufficiently to raise the felloe, and expose the shoulder and tenon of the spoke, open your leather and fit it nicely around the tenon, holding it to its place while your assistant relaxes the lever and settles the felloe firmly upon the spoke by a blow or two upon the tire. Having repeated the process with a sufficient number of spokes to make the tire all right, trim off the projecting leather even with the surface of the spokes and your task will be done. If your pieces of leather should be spongy, hammer them down before using.

EARTH-TIDES.—A committee of the British Association is investigating the question of the existence of earth-tides, or of oscillations in the crust of the earth similar to those which are produced in the ocean by the attraction of the moon. A pendulum is so suspended that its slightest motion turns a mirror and causes a perceptible movement in the spot of light reflected by it upon a distant screen. The pendulum is proved to be continually changing its position, for the reflected light is in incessant motion, and so irregular that it is hardly possible to localize its mean position on the screen within five or six inches. Mr. W. Mattieu Williams has sugested that the constant movements of the microscopic bubbles imprisoned within the cavities of gems and minerals are due to the same cause.

WILLIAMS'
BALSAMIC
CREAM OF ROSES.

For Beautifying the Complexion, Softening the Skin and Producing that Natural Freshness to the Complexion not obtained by any other Preparation.

DIRECTIONS:
Apply to the face and hands at night, just before retiring, and apply a little in the morning, rubbing it well into the skin. After being in the sun any length of time, or riding when the wind has been blowing, a small quantity of the Balsamic Cream of Roses will prevent tanning or roughness, and is sure to bring to the complexion that ruddy and healthy glow so much sought for, and seldom obtained. Its action on the skin is to restore natural circulation to the blood.

Elocution in the Lodge-room.

If there is one branch of scholastic training, above all others, in which Lodge members in general show a marked deficiency, it is that of accomplished speaking. This deficiency is not less glaring because a very little daily practice, or a few lessons under a skillful master, would soon eradicate the fault. There are members, however, who will persist in displaying their awkwardness in action, or untrained voices, and their mumbling, incorrect or affected articulation to the annoyance of all compelled to listen. We repeat that the Lodge-room is an excellent school for practical experience in the art of public speaking, but to make of it a mere recitation room, and for members to go on without improvement and wholly for the sake of display, or just to hear themselves talk, is an absurdity and a bore to the Lodge.

As a matter of course, this state of affairs leads us to believe that there must be a widespread neglect of the study of elocution in our public schools and colleges. Why, in ancient times regular schools for the education of the orator and elocutionist were regarded indispensable. They furnished, it is said, in addition to a long and classified array of grammarians and rhetoricians, fine gradations of schools for different species of muscular exercises and three distinct classes of instructors for the voice,—one to superintend practice in pitch, another to conduct the exercise in force, and a third to regulate vocal melody and inflection. The success of this special education was soon made manifest in the appearance of two great oratorical lights, which, though ages have passed since the fuel that fed them had ceased to exist, are shining yet, and yet shall shine in ages yet to come—Demosthenes and Cicero.

It is said that Whitefield, the prince of pulpit orators, could make his audience weep by the way in which he pronounced the word "Mesopotamia." If, therefore, the study of elocution has produced such illustrious examples in ancient times, why would it not be a good plan to revive it now? Nothing is wanted. It may be urged in rebuttal, that, since the invention of printing and the advent of newspapers, etc., such accomplishments are unnecessary. But we notice that even now people prefer to listen to a speech or sermon well delivered than to read the same well printed. No doubt, the printing press has changed the standard of oratory, but it has not destroyed it No doubt, it has brought the orator down from bitter invective and extravagant exaggeration, to facts, figures and proofs, but this is all. The science and art of elocution ought not to have fallen into disuse. The importance of elocutionary instruction is not confined, however, merely to public life; the correct use of the voice will react in physical advantage to the speaker; it will give added power and influence in social life, and even in business life the well-modulated voice of the salesman reflects character and confidence upon his representations.

The very imperfect way in which a great many ever confident Lodge members manage their voices in speaking, certainly leads us to the belief that there ought to be a revival of the noble study, which, be it said to the discredit of our educational institutions, has long lain buried beneath the wreck and ruin of mediaeval times.

SEND US NOTES.—The complimentary words and generous support that have been received by the WATCHMAN stimulate the editors to put forth renewed efforts to make "our paper" worthy of a great and growing fraternity. In this connection we solicit all the Lodges on this coast to appoint some one of their number to furnish items and news connected with each Lodge. We are fully convinced that the results that will follow will be mutually beneficial to the Order and WATCHMAN.

AT the meeting of Sts. John Lodge, on Thursday, May 25th, the following resolution was unanimously carried: *Resolved*, That it is the sense of Sts. John Lodge, No. 73, that we unite with the sister Lodges of this State, and extend an invitation to the Supreme Lodge to meet in San Francisco in June, 1883.

The Sword-fish.

Some of our readers will be interested in the engraving on this page, which shows the sword-fish in pursuit of its prey, and in the present case the sword-fish is an unconscious benefactor, for the dolphins which have leaped out of the water to escape the piercing of the sword will fall upon the raft upon which the group of shipwrecked persons are famishing. Stranger things have happened in real life than the artist has shown in the picture. It is not only the sword-fish which sometimes finds his selfish efforts frustrated or so shaped as to serve the general good.

Sword-fish is the common name for fishes of the family *Xiphiidæ*, remarkable for having the upper jaw prolonged forward in the shape of a bony sword. The sword-fish is often from 10 to 16 ft. long, has very fine scales, no ventral fins, a long, broken dorsal fin, and a large, deeply forked tail. It is a very rapid swimmer and is reputed to attack the largest whales with its sword. It sometimes strikes ships with such force as to penetrate several thicknesses of planks, and the sword is broken off and left in the wood. It is generally esteemed as food, and taken with the harpoon affords a dangerous and exciting sport.

THE SWORD-FISH IN PURSUIT OF DOLPHINS.

THE Grand Master and Deputy Grand Master visited Oak Leaf Lodge, No. 35, of Oakland, last Monday evening, May 8th. Several brethren were present from Pacific, No. 7, Keystone, No. 64, and other Lodges. The J. W. degree was conferred by D. G. M. Loud, and the work exemplified. Remarks were made by the Grand officers and P. M. W.'s Smith, Eastland, Winney, Palmer, Fuller, Robinson, Dunton Hirshberg, Alden and Overseer Gibson.

CALIFORNIA can pride herself on the promptness with which Relief Call No. 2 was paid.

Everywhere.

And still we come, bravely, surely, everywhere! The Ancient Order of United Workmen!

The seed which was sown in charity and nourished by the thanks of the poor has grown apace and multiplied; and now honor to the lords of the great heart and apostles of great thought, a nation proclaims, "well done!"

From town to town the honest work goes on. From the dingy coal fields of Pennsylvania, into the smoky streets of manufacturing cities, through the dazzling thoroughfares of the metropolis, spreading over the thrifty West, out on the desolate prairie, over the towering Sierras, along the golden shores of Albion, traveling everywhere the dauntless "Workmen" are seen, slowly, surely advancing, sweet charity in each heart, and their reward not only here, but far away beyond he grave, into the depths of eternity.

Young men, few investments yield greater interest than the small sum required of you to become a member of the A. O. U. W. Few sacrifices can give you so much true and honest pleasure. Few institutions can offer you so many inducements to form an upright unassuming character. Few schools can teach you that which you can here learn a tuition fees so low.

In the Lodge you meet only men of exceptional character, who come together for the purpose of improving each other. You are not pulled hither and thither to drink or wallow in the dregs of society, but you are continually shown and led up to the cool, sparkling waters of the higher regions.

There are many other societies which, doubtless, have the same end in view, but whatever others there are to which you may belong, the A. O. U. W. can not fail to be beneficial in every way.

FIDELITY LODGE, A. O. U. W., and Fidelity Lodge, K. of H., having in view a closer bond of fraternity, have established what will be known as "Fidelity Social Club." It is proposed and agreed to have quarterly entertainments, consisting of musical and literary exercises and a hop. There are something over 100 who have joined the club, and it will probably be one of the leading social societies of this city.

OVER 100 people pass a given point on Market St., S. F., every minute of the day. Assuming that this is kept up during 14 hours, 84,000 people would pass the same point during that time.

E. M. READING, P. M. W., and Secretary of the Guarantee Fund, will deliver the address at Memorial, No. 174, anniversary, on June 12th.

Home Miscellany.

Longfellow's Last Poem.

The *Atlantic* for May contains the last poem which Mr. Longfellow wrote, the revised proofs of which were read by him but a few days before his death. The poem is entitled "Mad River, in the White Mountains," and represents a colloquy between the traveler and the river, the traveler seeking to learn the river's song, and to know the reason for its hurry. The traveler asks:

Why dost thou wildly rush and roar,
Mad river, O Mad river?
Wilt thou not pause and cease to pour
Thy hurrying, headlong waters o'er
This rocky shelf forever?

What secret trouble stirs thy breast?
Why all this fret and flurry?
Dost thou not know that what is best
In this too restless world is rest
From overwork and worry

The river's answer is thus expressed:

A brooklet nameless and unknown
Was I at first, resembling
A little child, that all alone
Comes venturing down the stairs of stone,
Irresolute and trembling.

Later, by wayward fancies led,
For the wide world I panted;
Out of the forest dark and dread
Across the open fields I fled,
Like one pursued and haunted.

I tossed my arms, I sang aloud,
My voice exultant blending
With thunder from the passing cloud,
The wind, the forest bent and bowed,
The rush of rain descending.

I heard the distant ocean call,
Imploring and entreating;
Drawn onward o'er this rocky wall
I plunged, and the loud waterfall
Made answer to the greeting.

And now, beset with many ills,
A toilsome life I follow;
Compelled to carry from the hills
These logs to the impatient mills
Below there in the hollow.

Yet something ever cheers and charms
The rudeness of my labors;
Daily I water with these arms
The cattle of a hundred farms,
And have the birds for neighbors.

Men call me Mad, and well they may,
When full of rage and trouble,
I burst my banks of sand and clay
And sweep their wooden bridge away,
Like withered reeds or stubble.

Now go and write thy little rhyme,
As of thine own creating,
Thou seest the day is past its prime;
I can no longer waste my time;
The mills are tired of waiting.

Compensation.

"Ach, I have no letter from home!"

We were sitting, Herr Schenning and I, in the shade of some redwoods, far up in the mountain side, having strayed a little from our own band of picnicers. The trees, scarce moving in the light breeze, dropped their long shadows down the grassy slope, where, in the sunny places, the yellow butterflies flitted in and out among the purple lilies. The madronas spread their broad and shining leaves to the sun, delighting in its fervent heat, and making cool shades where the deer might rest when there were no picnician revels to desecrate their solitude. Through our sympathy with this beautiful spirit of solitude there had fallen upon us a long silence.

"What news have you from home?" I asked Herr Schenning at last, merely by way of saying something.

Without the movement of a muscle to show that he had heard me, he continued to gaze at the mountains, or rather far beyond them, to some white clouds slowly sailing through the blue. I was about to repeat my question, but paused, seeing the color deepen on his dark German face, and presently, with a great sob, as the flood-gates burst, came the cry:

"Ach, I have no letter from home!"

He buried his face in his hands, and, with dismay, I saw the swift-falling tears slip through his fingers, but the storm was as brief as it was intense. Herr Schenning was not one to give way to maudlin grief.

"You must think I am a glittering idiot," he said, as he laughingly shook the last tears from his fingers.

"No," I answered; "I think you are homesick, and I know the misery of that malady."

"Yes; in fact, I had a sudden and overpowering attack of it. Your question was a drop added to my heart's full cup. That tree (pointing to a fir tree that towered to the sky, with its great wavering and whispering boughs, had borne me far through yonder calm sky to the Fatherland. I was a boy again, and had strayed to my favorite fir tree at the edge of the forest; rocked in its branches, I heard the wild songs of the woodland; I saw the silver gleaming of Murg flowing down the Rhine; I saw the blooming orchards, the bird-haunted grove, and the little white house of Blumenwald. The fragrance of its flower garden came to me across the meadow, and I knew who walked there, wearing in her golden hair the blue flowers that I loved—my little Barbara. I cannot remember the time when I did not love her and think of her as mine. For her, I studied and struggled, and won my school-day prizes; for her, I sought to make myself wise and honored; for her sake, who had no gold for her dower, only her sweet self, more precious to me than all the gold of California—Heaven knows how precious, I thought, to be degraded by the slavery of our old-world life of poverty—for her dear sake I put aside her little clinging hands and kissed her pleading mouth, and came away to this great golden land of America. I, so wise with my Latin and Greek, so skillful in metaphysics, so deep in all the subtle science of the old-world's savants, came to California to make my fortune. I laugh to think how I have groped and stumbled in the broad bewildering light of this splendid young world, while those who can scarcely write the plebeian names they bear, dig into the mysterious earth and lift their hands glittering with treasure. At home, I might have walked with princes. Here, poor, ill-clad—shall I say it?—sometimes weak with hunger, I wander uncared for, except when some gentle heart like yours brings me, for pity of my loneliness, into a pleasant day like this. But forgive me for showing you such a broken spirit."

"Broken! Oh, dear!" I exclaimed, struggling wildly with my tears. "I should think it would be like that of Mrs. Plovinst's father—pulverized; crushed quite out of you. Herr Schenning," I added abruptly, "why don't you put your pride in your pocket and go home?"

He laughed.

"Alas, my pockets are too small, and besides, it would not be accepted for fare. No, I have committed suicide; I have no place, there or here. If I should one day slip from these sun-loved hights into some black abyss, where even the starlight fails, I should not be missed."

"What!" I said, "not even by little Barbara, who is waiting for you in her Blumenwald?"

"Heaven!" he cried, in another excess of despair, "there is no one waiting for me! Think you such a fool, such a beggar as I should be worth that? No, the father was right; he did well to marry her to Herr Heimsteher, whose broad orchards stretch to the verge of our loved forest. Frau Barbara is rich, I trust, and happy, with her fair-haired children clustering at her knee. If she ever thinks of the lover who left her so long ago, it is to smile at the airy-like future he promised her, though I dare to hope that sometimes, when the voice of my fir tree comes to her through the twilight, or when she plucks those blue flowers from her garden, she will remember me with a little throb of the old love. God bless her—and pity a poor wretch like me!"

The fir tree waved its long arms in the freshening breeze; the shadows crept up from the gorges and spread along the hillsides, as if seeking him who had spoken of their dark retreats; the bold outline of the Palisades showed stern and frowning against the sky, but the face of St. Helena, grand and sweet, lay smiling toward the west, waiting for the sunset glory and the solemn starlit night.

How it could have happened to the ever-splendid Ulrich and myself to lose our way, I cannot imagine, but we achieved that brilliant feat. Driving quite by ourselves in the rear of the small picnicing procession, we fell into farther talk of California ways. I was trying to impress Meinherr with the fact that he was too young to call his life a failure; that no one, at any age, in California, need despair, unless he lay down like a coward and let the crowd rush over him; that he must fight, and keep on fighting; that so often as he was thrown, so to speak, he must get up and rush at it again; that just as sure as fate there was a competence, if not a fortune, for every brave man here. Then I repeated my well-tried motto, "For every woe there is some compensation"—and just then we discovered that we were out of sight of our companions. Herr Schenning touched the horse, and we sped over the road at a pace that promised to soon bring us up with them; but, to our surprise, we neither saw nor heard them. The way began to seem strange. Herr Schenning adjusted his spectacles and took a survey of the surroundings.

"It is altogether the wrong way," he said, "but if we make haste backward we may reach home before it is very late."

My heart sank a little, for the way over which we had come was particularly mountainous. There were places which I hardly cared to pass after dark, and Herr Schenning, with his short sight, was, as he himself said, "not a pretty good driver." And how they would laugh at us! However, there was nothing for it but to retrace our way as swiftly as possible. Our conversation drooped somewhat; we both seemed to have a good deal of thinking that would not bear putting into words, although we made a brave joke, now and then, to keep up the illusion of not caring.

"But you are getting chilled," said Herr Schenning, anxiously.

I was, indeed, shivering in the cold night wind that came rushing down the canyons.

"Will you please to put on my coat?" he implored, in comical distress.

I stood but a moment upon ceremony, then allowed him to wrap the warm garment about me.

"Now," I said, laughing, "if you contract an acute bronchitis through your gallantry, I shall take you home and take care of you."

"Thank you," he answered, fervently. "To be taken home and taken care of seems to me, just now, to be the greatest good. If you would kindly conduct me to some asylum for the 'imbecilious,' I should be forever grateful. What compensation, think you, can there be for our present woes?"

"Let us await developments," I replied, with, I confess, a sort of tremor in my faith.

I looked at the frowning cliffs and glanced at the yawning gulfs below. The sun had set long since—the night was deepening. I felt all courage fading. I did not care now "what they thought." I wanted to be out of the terror of this way, safe under some roof.

"Herr Schenning, do you remember that snug ranch we so much admired as we came along this way?"

"Yes, we must be near it, and there indeed is the light from the little house."

We soon reached the gate. The moon at that moment rose grandly above the mountains, and poured her radiance down upon the cottage with its clustering outbuildings, its embowering shrubs and trees, the orchards and vineyards stretching far along the hillside. The fragrance of the mignonette and roses came down from the garden like old friends to welcome us.

"How lovely!" I exclaimed involuntarily.

"It is a little Blumenwald," said Herr Schenning, with a tremble in his voice.

Our first greeting came from the porch, a cloud of smoke from a generous pipe, and from its neighborhood came an unmistakable German voice, making an answer to Herr Schenning's salutation. A rapid conversation in their own language seemed to put us in the right light, for our host ushered us cordially within the cottage.

"I dinks you must be quite shilly," he said, placing a chair for me near the hearth, where a pleasant fire added its glow to the hospitality of the kindly voice. "It is zo cold auf der mountains; it is petter you taste dis vine. Mein frau will pooty quick come; she is mit der shildren. Ach, she is come," he added, as a fair-haired, rosy young matron entered. "Katrina, dese pe zome young people vat got lost from a pignig."

"Ach, zo!" exclaimed Katrina, compassionately looking at us, as if she thought we might be the veritable Babes in the Wood grown up. At that, and the touch of womanly sympathy in her look and tone, I burst into hysterical weeping. Her arms were about me in a moment; and what with her droll English, her humorous expressions and comforting assurances, I soon recovered my composure, and glanced at Herr Schenning to see how it was with him. Pale, and with lips tensely set, he was gazing at Katrina as if intent upon penetrating some mystery.

Katrina, in her enthusiasm, was running about the room, and putting supper on the table, quite ignoring the fact that we belonged to a picnic. Taking up a book that lay upon a table beside me, I started at reading the name, "Frau Heimsteher," and gave Katrina such a look that she came to see what was on the page.

"Ach, yes; that is pring me from Germany by mein sister. She comes pooty soon. She makes asleep mein kleine mann, mein leetle Ulrich, what she gave him de name. It is," she added, confidentially, "de name of von she lofe long, long ago. He is dead now—poor Ulrich. Ach, what a peety! So nice he vas, so vise, and she zo much lofe him! She vill never get married to any odder von. Ach, no!" said Katrina, pensively returning to give another touch to the neatly-spread table.

Herr Schenning sat with bowed head, his face hidden. I heard soft footsteps approaching, and a faint odor of violets came through the door. I looked. There in the doorway, with the little Ulrich slipping from her arms and clinging to her dress, stood a golden-headed woman, fair and sweet as any pictured Marguerite, although a little past the time of blooming youth. She looked beyond me, her blue eyes slowly dilating, to Herr Schenning, who had risen and was gazing at her as if spell-bound by an angelic vision. Her sweet face flushed like any rose, till, with an ineffable smile and cry of joy, she reached out her arms to him.

"Ulrich!"

"Barbara, liebling!"

* * * * * * *

When, some months after this, Herr Schenning had taken out citizen's papers, and, with his little frau, settled upon some Government land adjoining Herr Heimsteher—who, after all, hadn't stayed at home, and hadn't married Barbara—and, as a climax, discovered upon his ranch a gold mine that promised to pay for working, I asked him what he thought of the law of compensation.

"It is divine!" he answered fervently.

MOSQUITOES AS DISEASE CARRIERS.—The discovery that mosquitoes carry filaria in their probosces and infect the human subject with that much-dreaded worm parasite, has attracted considerable attention among English microscopists. Particulars of various cases are given, in which it is proved that those suffering from filaria had received the contagion from mosquitoes, and the latter have themselves been found infected with filaria. The latter are very minute worm-like parasites, which, on entering the human body, breed until they increase to countless numbers. They are also said to have the power of entering and leaving the body at pleasure—usually invading the circulation in the evening, increasing till midnight, and the retiring to other parts of the system

THE Elko (Nev.) *Independent* says: Reports from the various agricultural districts, east and south, within the county, show that plowing is well advanced generally, a majority of the farmers having finished, and in a number of localities they are through seeding also.

Overcoming Summer Heat.

The time is approaching when the thermometer will do its best work in the hot valleys of our State, and aids to withstand the heats may be valuable. It is generally known that the lofty marks to which the mercury sometimes ascends are not true measures of heat effects upon men and animals, because, through the dryness of the air, there is none of the prostration which accompanies great heat in countries with a moist summer. Nevertheless, there are times when it is quite valuable to be able to reduce the temperature a few degrees. The best way to do this is by using the coolness which proceeds from the evaporation of water. Perhaps a lesson can be learned from East India contrivances. According to *Chamber's Journal* they use in India what is called a "tattie," a large curved or sloping screen, which accurately fits into each door or window facing the west, and is made of the roots of the khuskhus grass (*Andropogon muricatus*), which singularly combines strength and porosity with the most delicious and refreshing fragrance. These screens are about an inch in thickness, and, during the hot and dry west wind, are saturated from outside with water, which immediately commences evaporating under the fierceness of the blast; and as evaporation always implies cold, the wind which, in the veranda, would raise the thermometer to 120° Fahr., passes into the house at 75° to 80°, laden with a delicious fragrance. While tatties are in working order all other cooling appliances are unnecessary.

In the neighborhood of Gwalior and Jhansi there is another form of tattie. A small, creeping, thorny variety of the ber (*Zizyphus jujuba*) is largely found in the jungles; this is collected and dried, and at the proper time the whole west veranda is inclosed with thorny walls nine to ten inches thick, and these being saturated from the outside, all doors are thrown open, and a delightful temperature is secured. Tatties are of no use during the easterly wind, which ushers in and accompanies the rains. Laden with moisture it is a damp wind, and therefore retards evaporation. The creeping thorny plant, *Zizyphus jujuba*, is growing in different parts of this State, and is known as the jujube, and could be had for tatties, if the growers wished to sacrifice the fruit which they are growing it for. But it is not at all necessary that we should take the time required to weave the thorny jujube into brush-cloth. All that is needed is to get some material which will hold the water in contact with the air as it passes through. No doubt our tules would make good tatties, and the evaporation of water thrown on the leaves of vines thickly covering the sides of the veranda would produce as much coolness as a hedge of brambles. There is great chance for ingenuity in choice of materials and methods of using them, but the principle is constant, to wit, the evaporation of water before admitting the hot wind to the domicile. A good hot summer norther will certainly furnish the wind power to dry out miles of tatties.

The Sun's Fuel.

What keeps the majestic ball hot and bright? This has greatly engaged physicists and astronomers, and various have been their theories. If the sun shone only by mere combustion of its own materials, the calculation is that its fire would not last 5,000 years. It is very kind of Dr. Siemens to come forward with an entirely new theory, which holds out the hope that the men of science are all wrong with their dismal foreboding, and that the creation is not schemed on the poor footing of a German stove or a suburban gas company. The learned ironmaster and physicist believes that the sun may very well go on illuminating and warming our world and the family of sister planets for an indefinite, if not infinite, time. He supposes interstellar space to be filled with an extremely attenuated hydrogen, and interplanetary space with denser gas, albeit more rarefied than the atmosphere drawn round each world. The sun, he thinks, whirling on its axis, draws into its poles the thin hydrogen, hydrocarbon and oxygen of our sphere, and these, being kindled, are projected outward at his equator into space. The accepted view is that the heat and light there developed and radiated perish, as far as we are concerned, except for the small portion arrested by each solar satellite; but Dr. Siemens argues that this heat and light do their chief work in decomposing the carbonic oxide and watery vapor which were produced by the kindling at the solar poles, so that the sun itself perpetually renews its own supplies, and restores by its energy the waste matter which has fed that energy. The theory is much too technical and complicated to be here discussed, and we should offer a bad compliment to its ingenious author even to attempt such a task. Dr. Siemens, however, has had great experience with the phenomena of radiated heat, and his applications of the new view to the nature of the zodiacal light and of comets is particularly striking. Of course it is startling to hear of something in our own system which closely resembles perpetual motion; and those who maintain that everything comes to an end, and that all mechanical energy must be gradually degraded and metamorphosed, will be slow to receive the new suggestion.—*London Telegraph.*

For our Boys and Girls.

Our Puzzle Box.

Cross-Word Enigma.

My first is in near, but not in far;
My second is injure, but not in mar;
My third is in wren, but not in jay;
My fourth is in yellow, but not in gray;
My fifth is in true, but not in false;
My sixth is not in dance, but in waltz;
My seventh is in bear, but not in dog;
My eighth is in swamp, but not in bog;
My ninth is in now; but not in ever;
My tenth is in soon, but not in never;
Now, if the whole of my name you see,
A Southern city you'll find it to be.

MARK.

Buried Cities and Towns.

1. Leo, we go to Naples by the next steamer.
2. The box for Davenport has been forwarded.
3. Amelia pronounces buff a lovely shade for gloves.
4. The winds or tides may delay us for an indefinite period.
5. A quarrel with Dick ensued.
6. Such an oversight should be severely punished.
7. When all entered the house was filled to overflowing.
8. "I saw a small pistol in Denis' room," testified a witness for the prosecution.

AUNT SARAH.

Charade.

With the early first of day
Starts the traveler on his way,
From my second's shelter gay,
Where all night he safely lay.

CROSSCUT.

Reversals.

1. Reverse a wild animal and make the rise of water.
2. Reverse a form of an irregular verb and make a relative.
3. Reverse a boy's name and make the abode of a wild beast.

Curtailments.

1. Curtail a vegetable and leave an insect.
2. Curtail an insect and leave a verb.
3. Curtail a wild fowl and leave a brave man.
4. Curtail a sailing vessel and leave a reptile.

The Cobbler Who Kept a School in a Workshop.

Did you ever hear of John Pounds? Probably not, and yet he was one of the world's benefactors. He was born in 1766, in Portsmouth, England.

In early life he learned the trade of a shipwright, but was so injured by a fall that he had to abandon this. He then mastered the art of mending shoes, and hired a little room in a weather-beaten tenement, where for a while he lived alone, except for his birds. He loved birds dearly, and always had a number of them flying about his room, perching on his shoulder or feeding from his hand.

In the course of time a little cripple boy, his nephew, came to live with Uncle John and the linnets and sparrows. The poor child had not the use of his feet, which overlapped each other, and turned inward. The kind uncle did not rest until he had gradually untwisted the feet, strengthening them by an apparatus of old shoes and leather, and finally taught them to wak.

Then he thought how much more pleasantly the time would pass for the boy if he knew how to read and write, and so he began to instruct him. Presently it occurred to him that he could teach a class as easily as he could manage one pupil. So he invited some of the neighboring children in, and as the years went on this singular picture might be seen:

In the center of the little shop, six ft. wide and about 18 ft. long, the lame cobbler, with his jolly face and twinkling eyes, would be seated, his last or lapstone on his knee, and his hands busily plying the needle and thread. All around him would be faces. Dark eyes, blue eyes, brown eyes, would shine from every corner, and the hum of young voices and the tapping of slate pencils were mingled with the singing of the birds which enjoyed the buzz of the school.

Some of the pupils sat on the steps of the narrow stairway which led up to the loft which was John's bedroom. Others were on boxes of blocks of wood, and some sat contentedly on the floor. They learned to read, write and cipher as far as the rule of three; and besides, they learned good morals, for much homely wisdom fell from the cobbler's lips.

Hundreds of boys who had no other chance—for he gathered his scholars from the poorest of the poor—learned all they ever knew of books from this humble teacher. His happiest days were when some sunburned sailor or soldier would stop in his doorway, perhaps with a parrot or a monkey in his arms, saying: "Why, master dear, you have not forgotten me, I hope?"

John Pounds taught his little school for more than 40 years, never asking or accepting a cent of payment from any one.

At the age of 72, on Jan. 1, 1839, he suddenly died, while looking with delight at a sketch of his school which had just been made by an artist. For many days the children of the place were inconsolable, and by twos and threes they came and stood by the closed door, which, in John Pound's time, had always been open to the needy.

A life like this, so lowly yet so useful, contains lessons for us all.—*Harper's.*

Household Hints

HINTS ABOUT FROSTING.—A little cream of tartar mixed with the sugar of which you are to make boiled frosting will improve the frosting greatly; it will harden at once, and you will be spared all anxiety in the matter. A good rule for making this kind of frosting is this: Two cups and a half of sugar, two-thirds of a cup of water; boil until it candies, that is, until it will drop from the spoon in threads, or will harden in cold water. Then add the whites of three eggs beaten to a stiff froth; stir it briskly for a few minutes, till it is perfectly smooth; add the juice of one lemon. This quantity will be enough to put between the layers of a medium-sized cake, and will also frost the top and sides. If you wish to frost the top and sides only, one cup of sugar and one egg will be enough.

WAFER GINGERBREAD.—Half a pound of flour, half a pound of the coarsest brown sugar, one-quarter of a pound of butter, one dessert-spoonful of allspice, two of ground ginger, the peel of half a lemon grated and the whole of the juice; mix all these ingredients together, adding about half a pound of treacle, so as to make a paste sufficiently thin to spread upon sheet tins; beat it well, butter the tins, and spread the paste very thinly over them. Bake it in rather a slow oven and watch it till it is done. Withdraw the tins, cut it in squares with the knife the usual size of wafer biscuits, and roll each around the fingers as it is raised from the tin.

ALMOND JUMBLES.—Ingredients: One pound of sugar, one-half pound of flour, one-quarter pound of butter, one teacupful of loppered milk, five eggs, one tablespoonful of rose water, three-quarters pound of almonds, one teaspoonful of soda, and use boiling water. Blanch the almonds and chop fine, but do not pound them; dissolve the soda in boiling water; cream, butter and sugar; stir in the beaten yelks, the milk, the flour, the rose water, and the almonds; lastly the beaten whites very lightly and quickly; drop in rings or round cakes on buttered paper, and bake quickly. Grated cocoanut may be substituted for the almonds.

CONCERNING TOWELS.—Never put a new towel in the wash until you have overcast the fringed edge. The use of this is obvious the moment one is told of it, though a dozen towels might be worn out before one would discover it. If when towels are washed the fringe is shaken well before they are hung up to dry, the fresh appearance will be preserved for a long time. If vigorously shaken, that is all that is necessary; otherwise it is best to have the laundress whip the fringe over the clean back of a kitchen chair. This is much better than any combing process. Besides it does not wear the fringe so much.

BLACK COFFEE.—To make coffee good it should never be boiled, but boiling water should be poured on it just the same as for tea. A great deal of the aroma of coffee is lost unless it has been freshly roasted, and one reason why Germans and French excel in their coffee is simply because they roast each day sufficient for the day's needs. It should never be ground until it is wanted for use. To make excellent, strong, black coffee, allow one and a half ounces or one and a half tablespoonfuls of ground coffee for each person, and to every ounce of coffee allow one-third of a pint of boiling water.

BRETON CAKE.—Ingredients: One cupful butter, one and one-half cupfuls sugar, five eggs, one and one-half teaspoonfuls baking powder, one and one-half pints flour, one pint cream, and three-quarters of a pound of prunes. Soak and stone the prunes, cutting each into three pieces. Rub the butter and sugar to a cream; add the eggs one at a time, beating two minutes between each addition. Sift the flour and powder together, which add to the butter, etc., with the cream and prepared prunes. Mix into a batter moderately thick, and bake in a steady oven 45 minutes.

BEEF TEA.—A quick way to prepare this is to chop a pound of lean beef fine and put in a bowl, covering with cold water. Let it stand for 15 minutes onward—that is, longer if you have time. Then pour beef and liquid into a saucepan and boil from 15 to 30 minutes. Strain off the liquid; season slightly with salt. It is better to let it cool and take off the fat; also to let the beef soak a long while, as that draws out the juices. Soak in cold water.

OMELETS.—A simple and acceptable omelet is made by beating three eggs and adding a cupful each of new milk and bread crumbs. Turn into the frying pan, which should be warm and contain enough drippings to prevent the omelet from burning fast. Cook rather slowly, and as soon as done sprinkle with salt and pepper, and roll up like jelly cake. Serve at once.

COCOANUT CAKE.—One and a half cups of sugar, half a cup each of butter and milk, one cup of cocoanut grated fine, two cups of flour, three teaspoonfuls of baking powder. Bake in pans, with dry cocoanut sprinkled over the top.

EGGS IN CAKE.—If you wish to make a cake which will keep well, use the yelk of eggs only; they make it much more moist and less liable to dry than the whites do.

Health Column.

Flesh Worms on the Face.

The black points, flesh worms, technically termed comedones, which are found in the face, and especially near the nostrils, are not at all produced by the accumulation of the particles of dirt or dust, as has generally been believed, but by pigmentary matter, which is soluble in acid. It is known, in fact, that black comedones, which accompany and often appear, not only on persons exposed to dust, or rather careless of their person, but also on chlorotic young girls who live in good circumstances. Besides, observation shows that the discoloration not only exists on the surface of old comedones, but descends always to the lower parts. Accepting this fact, Unna has used successfully acids in the treatment of comedones. He generally prescribes: Kaolin, 4 parts; glycerine, 3 parts; acetic acid, 2 parts, with or without the addition of a small quantity of some ethereal oil. With this pomade he covers the parts affected in the evening, and if need be during the day. After several days all the comedones can be easily expressed, most of them even come out by washing the parts with pumistone soap. The same results can be obtained by bandaging the parts affected for a long time with vinegar, lemon juice, or diluted hydrocloric acid. The author concludes by saying that the acids act like cosmetics, as they transform the black color into a brown and yellow shade, and destroy it gradually altogether; they produce a quicker desquamation of the horny bed which interrupts the exit of the comedones and brings to the surface the glandular openings.—*Archives de Virchow.*

"HARDENING" THE BODY.—A young man was an earnest advocate of a theory that the human body can accommodate itself to any temperature in which it may be placed. One winter he determined to harden himself by wearing no covering for his ears; they were badly frozen on a very cold day, and were tender for several years after. He grew wise and abandoned the hardening process. A young woman heard an eloquent lecture on the importance of fresh air in chambers at night. The lecturer said there was no danger from a window slightly opened; the body would soon harden itself so as to resist the effect of the exposure. She tried the experiment one cold night and caught a severe cold, which lasted the entire winter. She lost faith in hardening against cold. A young mother maintained that children ought not to be brought up too tenderly. Arms and legs ought to be hardened by exposure in early years, and not be made tender by warm coverings in winter. She lost her two oldest children by croup and pneumonia, induced, as the physician said, by insufficient clothing. She gave up the attempt to harden the others. The best way to harden the body is to protect it well from extremes, both of cold and heat, and build up a strong constitution by good food, good sleep and good exercise.

OUT DOOR AIR AND EXERCISE.—The surest of all natural prophylactics is active exercise in the open air. Air is a part of our daily food and by far the most important part. A man can live on seven meals a week, and survive the warmest summer day with seven draughts of fresh water, but his gaseous nourishment has to be renewed at least 14,000 times in 24 hours. Every breath we draw is a draught of fresh oxygen, every emission of breath is an evacuation of gaseous excrements. The purity of our blood depends chiefly on the purity of the air we breathe, for in the laboratory of the lungs the atmospheric air is brought into contact at each respiration with the fluids of the venous and arterial systems, which absorb and circulate it through the whole body; in other words, if a man breathes the vitiated atmosphere of a factory all day and a close bedroom all night, his life-blood is tainted 14,000 times in the course of the 24 hours with foul vapors, dust and noxious exhalations. We need not wonder, then, that ill-ventilated dwellings aggregate the evils of so many diseases, nor that pure air should be almost a panacea. Out-door life is both a remedy and a preventative of all known disorders of the respiratory organs; consumption, in all but the last stage of the delirium, can be conquered by transferring the battle-ground from the sick room to the wilderness of the next mountain range.

THE BORACIC ACID TREATMENT OF DIPHTHERIA.—Dr. T. D. Harries, of Aberystwith, reports in the *Lancet* a very successful treatment of diphtheria by the local application of boracic acid in solution. The solution is prepared and applied as follows: Boracic acid, two drams; glycerine, half an ounce; water, half an ounce; to be applied freely to the fauces every hour at first, diminishing in frequency with the disappearance of the deposit and general symptoms. The application should be continued for some days after the throat has become perfectly clean. If discontinued too abruptly, the deposit is almost certain to reform, with a return of the general symptoms; and with the view of warding off this danger, I make it a rule to continue painting up to the eighth day, after which date the patient may be considered comparatively safe. The solution seems to have no injurious effect when swallowed, as I have frequently applied an ounce during 24 hours in the cases of children of from four to five years of age.

Worth Knowing.

Workmen in an Employer's Shop.

Every man in a workshop ought to constitute himself the guardian of his employer's property, and not only should he avoid waste himself, but, as far as practicable, he should discourage it in others. If this were done, millions of dollars would be saved to the country, a much larger percentage of profits would go into the pockets of the employer, manufacturers would be enriched, and, in the end, the workmen would be proportionately benefited. Strange that these simple facts should have so little weight; but so it is. Waste by another is cruel to the man who has to pay. It does not, can not, benefit the person guilty of it, and it is a dead loss to the nation. And every scrap of material so destroyed makes the product more costly, and consequently dearer. In the interest of workmen it is important that these facts be borne in mind. Wages bear a relative proportion to cost of raw materials, and both combined determine the price of commodities; the cheapness of the latter augments their sale, increases their production, enhances the demand for labor and tends to keep up wages; the reverse is equally true. If, therefore, an obvious duty is neglected or carelessly performed, the men mainly responsible ultimately suffer, and that suffering will be in an exact ratio to that which produced it.

One great remedy for the losses incurred by waste is a closer supervision of every detail of the undertaking, whatever it may be. This, however, involves extra expense. If the men can contribute to a saving in this respect, they will indirectly reap the advantage. To overlook this fact shows a lamentable ignorance of the internal economy of a workshop and of the forces and influences always at work for the purpose of bringing about a given result. And the men who complain of strict supervision are just those who need it most, and who, without it, would render large contracts next to impossible, for the simple reason that they would not pay, and could not therefore be executed. Many a builder and contractor has been ruined by the wastefulness of his employes and negligence of his foreman. A careful man is a jewel in a workshop.—*Builder and Wood Worker.*

NEW WINE-MAKING PROCESS.—Adolph Reihlen, of Stuttgart, has invented a process of wine-making, which, says the Vienna *Free Press*, opens a new era in wine industry, because it affords a means of thoroughly utilizing the grapes. An increase in the quantity of wine produced is attained without, as in the case of Petiot's and Dr. Gall's method, affecting its quality. Riehlen operates as follows: The berries are gently pressed, the must heated to boiling, and the marc mixed with the boiling must for three or four minutes, whereby the coloring matters, tartar, aroma, and other valuable substances are extracted, and at the same time the injurious albuminous substances are rendered insoluble. The marc is, however, not quite exhausted by this process, but is capable of imparting the rest of its still valuable contents to weak wines, so-called fruit wines, and saccharine liquids generally. By this method (which has been in operation since 1880), when purple grapes are worked up for wine, a deep bluish-red must is obtained in a few minutes without fermentation, the quantity of coloring matter extracted by the boiling must being from three to seven times as much as that extracted according to the old method after three months' fermentation. Reihlen further prepares the marc of purple grapes in such a way that even after years this will impart a color to red wines which have become bleached, or revive the taste of deteriorated wines. The process can be applied to both red and white wines, and the bouquet peculiar to the Reisling and Traminer grapes admits of being imparted to the must from other kinds of grapes.

POTASH AND KEROSENE.—Much injury has been done to trees in Santa Clara county by the use of petroleum. At the last meeting of the county horticultural society, Mr. Vestal, of the Standing Committee on Insect Pests, said that where oil had been used on pear and apple trees with caution, no special injury had been done; but he should lay down the general rule—for stone fruits avoid oil and put on potash. The committee had found that it was still problematical whether it were better to use kerosene or lye.

POROUS BRICKS.—The association of proprietors of steam engines in the north of France has made numerous experiments which show that many of the bricks that are employed in building furnaces are so porous as to allow an easy passage for the air. In consequence of these experiments, they advise that no bricks should be employed for the purpose which are not very compact and refractory, and that they should be either glazed upon the outside or covered with an impenetrable varnish.—*Chron. Industr.*

AIRING FEATHER BEDS.—Do not put your pillows or feather-beds, if so unfortunate as to have feather-beds, into the sun to air, but in a shady place, with a dry wind blowing over them. If it is cloudy—but not yet damp—and the wind strong, it is all the better. This, if practiced often, will keep well-cured feathers always sweet. Badly-cured feathers cannot be made sweet. A hot sun on the best of feathers will turn them rancid.—*Mrs. Beecher.*

Recorders are invited to correspond. Lodges may also find suitable reading here for "good of the Order."

Valley, 30.

On May 23d seven candidates received the M. W. degree in Valley Lodge, and three applications for membership were made. This being the last meeting night of the month, there was a large attendance. The Grand Master made a short speech during the evening. In the course of his remarks the advisability of inviting the Supreme Lodge to San Francisco was advanced. It is proposed to hold a meeting in each district in San Francisco and Alameda, to get an expression of views in relation to this project. If favorable, a telegram will be sent to the Supreme Lodge inviting them to come.

Magnolia, 41.

The evidences of thrift and prosperity in this subordinate is apparent. On Monday evening, May 22d, there was a large attendance, and the J. W. degree was conferred on four candidates After this the same Junior Workmen received he degree of M. W. The work was well done, and reflected credit on the staff of officers. This Lodge pays sick benefits of $10 per week and have over $3,000 in their general fund. Under the proper head there were several good speeches made, among which was one from S. T. Dodson, P. M. W. of Santa Cruz Lodge.

Myrtle, 42.

Myrtle, 42, is, as usual, prospering. At the last meeting two candidates received the M. W. degree. Dr. J. A. Anderson, one of the newly elected members, was elected Medical Examiner pro tem., office 310 Kearny, next to the *Chronicle* office. The brethren of Myrtle will make an effort at once to place their membership at the 200 mark soon.

Excelsior, 126.

The gem of the Mission, Excelsior, No. 126, is moving along nicely; as a prominent brother says, "We are taking one or two every night, except the last night of each month, which is given to social and literary exercises, consisting of a regular debate." As a rule they follow the original plan, viz.: A resolution is introduced and the usages of parliamentary bodies carried out until the subject comes before the body, when a debate ensues. These meetings are very popular and instructive.

Fidelity, 136.

The Ancient Order of United Workman in this State is, in point of intelligence, moral worth and the number of public men enrolled among its members, second to no other fraternal organization. Of the number of Lodges in this jurisdiction having the unwritten work perfect in all its detail; having, as a fact, a social recognition of the highest character, a pride in the selection of its members, a reputation for deeds of charity whenever called upon, a steadfastness of purpose in carrying out the fraternal feature, as well as the practical object of the Order, no Lodge in California stands higher than the Lodge whose name and number we place at the head of this article. On its roll of membership are men of the most excellent character, both in private and public capacity; and, what is a most gratifying feature in the Lodge, is that its members take an interest in maintaining its sociability, repudiating at once any attempt at antagonizing views that may come up for discussion beyond the line of the strictest propriety. In this manner they have cemented among themselves bonds of the warmest and most enduring friendship and brotherly love. In this respect many Lodges might take a lesson that would enhance not only the interest of the members, but reflect more credit upon the teachings of the Order. We hope the fraternal chain which seems to so closely unite the brothers of Fidelity Lodge will remain for years to come as strong as now; that no link will snap; that no imperfection will be discovered, but that they may go on adding day by day to its beauty, harmony and amiability.

Bay View, 159.

Will give a grand entertainment on Friday evening, June 30th. All Workmen and their families and friends are invited to be present.

Oakland Lodge Locals.

Occidental, 6.

EDITORS WATCHMAN:—As you have made an additional call for more Lodge locals, I will send you a short one. I will begin by saying that the members of our Lodge find in the PACIFIC STATES WATCHMAN a journal that contains, and in fact, is full of interesting and instructive matter appertaining to our Order, and is a paper that should be read and patronized by every member of our Order. At almost every meeting of our Lodge the brothers' attention is called to some particular item or editorial which would be for their benefit to read. As for our Lodge, we are progressing as rapidly as we care to, as we are a beneficial Lodge, and, therefore, are doubly watchful of our membership. We have increased our membership since the first of January last 21, and the prospects are very flattering for more to come, and I can say, as I have been present at most every meeting since the Lodge was instituted, that we have not had anything in the way of debate to mar the harmony of the Lodge, and consequently our Lodge meetings are well attended, on last Friday evening there being 63 present. In losing Bro. Fisko as our Deputy we have lost an efficient officer, one who did his duty honestly and efficiently, and won the good will of all the brothers of his district. Our new Deputy, Bro. J. J. Schutz, although a comparatively young member, has shown a love for and taken an interest in the Order that would alone make him capable to fill the position to which he has been appointed, and all we can say is, that if the brother fill the position as District Deputy as capably and as thoroughly as he did the offices in this Lodge, that he will do himself honor. By his actions in the Lodge-room one would think that he lay awake nights thinking what he could do to make Lodge pleasant and the brothers, when in Lodge, happy. He has a long pocket and it is always full of cigars. Our amount of cash on hand is $1,300, and we still continue to pay $10 a week sick benefits.—CORRESPONDENT.

Lodge Locals.

Enterprise, 17.

It might have been termed a joint meeting of Enterprise and Mt. Hamilton Lodges on Monday evening, May 15th. After the business of the Lodge, which took a wide range in planning for the coming excursion, a short time was spent in congratulatory speeches. H. G. McCormick, P. M. of Bernal Lodge; J. B. Church, Grand Trustee; A. B. Hamilton, Deputy; and Wm. Osterman, M. W. of Mt. Hamilton Lodge, were present.

Monterey, 98.

The anniversary of Monterey Lodge, No. 98, was noted by a grand celebration on Tuesday evening, May 23d. The exercises consisted of an address in the old State Capitol by the Grand Master to a large and appreciative audience. The balance of a very pleasant evening was given over to spirited dancing, after which there was a grand supper.

Silver Spray, D of H.

The meetings of Silver Spray are well attended and the Lodge slowly increasing in membership. At their last meeting, May 22d, one candidate was given the degree, nominations made for officers, a short musical programme and some terpsichorean exercises. As a social feature in our Order, Silver Spray, D. of H., is an unqualified success.

I. A. DUNSMOOR, Deputy, instituted Fidelia Lodge, No. 11, D. of H., on May 9th, with 36 charter members, and installed as its first officers: Mrs. I. A. Dunsmoor, P. W. S. of H.; Mrs. T. F. Barnes, W. S. of H.; Mrs. J. J. Woodworth, S. of H.; Miss E. Meyer, S. of C.; Mrs. J. H. Valdev, Secretary; Mrs. R. S. Hopperstead, Treasurer; Mrs. A. B. Chapman, S. U.; E. Fisher, I. W.; J. A. Valdev, O. W.; C. A. Baskerville, J. J. Woodworth, Advisers; Mrs. A. H. Fox, Mrs. R. G. Cunningham, M. to S. of N.

THE KEY-NOTE.—C. M. Bonsch, Grand Overseer of Pennsylvania, has struck the key-note of the situation in Iowa, and there is no escape from his logical conclusion. He says: The Grand Lodge is but a creature of the Supreme Lodge, and this truly and effectually so in the case of Iowa. All that the Grand Lodge has, it obtained by virtue of the power granted to it by the Supreme Lodge, and the Supreme Lodge has not only the authority to revoke that power, but also to take possession of all the property, rights and privileges obtained by the Grand Lodge under that power. * * * The right to exist as a congregation or a Synod of a certain denomination, or as a Lodge or a Grand Lodge of a certain Order is not obtained from the civil authorities, but from the higher ecclesiastical judicatory, from the higher authority in the Order, and if this right is withdrawn by the power that gave it, no act of incorporation or civil charter can retain it, neither will the civil courts have any power to restore it. Every Free Mason or Odd Fellow would ridicule the idea that a civil court or authority could restore any of their expelled members, suspend Lodges or Grand Lodges, or revoke charters.

POSTMASTER-GENERAL HOWE in his letter to Congress recommending the abolition of postage upon newspapers and magazines says: "It may well be doubted if the whole people get as much information of public affairs from volumes gratuitously thrown at them by the Government, as they do from the newspapers and magazines which they purchase and pay for." The Postmaster-General recites other considerations which lead him to the conclusion that Congress may at the present time safely abrogate all discrimination between subscribers to newspapers and magazines, and send the same through the mails without charge, whether such subscribers live within the county of publication or out of it.

THE agreement entered into by the manufacturers of cotton goods, cotton and jeans, and other low-grade textile fabrics, looking to a reduction of the quality produced in Philadelphia and vicinity, has gone into effect, and many mills shut down. The movement is to curtail the production of lower grades 50% and manufacture the finest class of materials of 22,000 looms. In Philadelphia nearly 10,000, or the greater number of those engaged in making the goods mentioned, have entered into a compact, and a large number outside of Philadelphia, have agreed to join the movement.

Charity and Fraternity.

BY J. G. SEVERANCE.

The following poem was prepared to be read at the A. O. U. W. picnic at Belmont, but owing to professional engagements of the author, who was compelled to be absent, the reading was unavoidably omitted. As many were anxious to read it, however, it is here given:

[Prologue.]

Would you have me make confession
Why this festive, grand procession
Marches from the city, yonder,
Through these rural groves to wander—
From the noisy city marches
Underneath these sylvan arches,
Scorning other life employment
Than the search of pure enjoyment?
Why the editor—the molder
Of opinion and the folder,
Pressman, printer, newsboy, devil,
Meet for once upon a level—
Meet for once without the bound'ry
Of their great opinion foundry?
Why the doctor leaves off trying,
By his arts, to aid the dying
Patient, feels his own pulse, beating
With the fevered joy of treating
Toil and care to anæsthetic,
And his shop to an emetic;
Why the lawyer here prefers to
Rest; and specially demurs to
All demands of labor, pleading
Feasibility since needing
Brief vacation in the trials
Of his life of self denials—
Breaking through all legal shambles,
In the courts of nature rambles—
Why the merchant quits his delving-
Toil and wares together shelving—
Yields of profit a short measure
To the counter-claims of pleasure;
Why, in joys of living, trying
To baptize the woes of dying,
Here, ecclesiastic brothers
Go the road they show to others.
Why the teacher, with dilating
Pupils, views the graduating
Course of Nature, quits the mural,
Pent-up schoolroom, for the rural;
Why the bankers vault their treasure,
And on sight of current pleasure,
Draw their drafts—all checks dishonor
That are offered them upon her;
Why the bulls and bears, abating
All their fury, here are mating;
Why the varied sort of draughtsmen,
Soldiers, artizans and craftsmen
Of each art, trade and profession
Join this festive, grand procession,
Where this sea of faces flushes
Back the hue of Nature's blushes—
Where these eyes with gladness glisten—
Would you have me tell you? Listen!

I.

A great man had fallen—temptation was greater—
A scandal had shadowed his home;
The fault was a trifle, and yet each narrator
Would to the sad story give some
Additional features, by simply expressing
His own private views of the case,
Which, by repetition, like mosses caressing
The stone, made a mound of disgrace.
First strangers avoided—then comrades forsook him,
As if he of sinners were chief;
Misfortunes increased, till despair overtook him;
A maiden then brought him relief.
A golden-haired maiden—when all the tale twisting
Of envy had had its full scope—
Appeared, like an angel, and with her, assisting,
Her faithful companion, named Hope.
She stripped off the mosses that formed the huge mountain,
Disclosing the error alone;
When Hope had revived him with draughts from her fountain,
Her mantle had covered the stone.
Now list, while I mingle with terms eulogistic
The name of this maiden so fair;
Her deeds are so God-like, her name is made mystic,
This maid with the bright, golden hair—
Is Charity!

II.

One eve with a Workman from labor returning
Where home held his treasures in store—
For his wife's fond caress, and child kisses yearning,
A hydra crept in at the door.
Disease is the name of the dragon that crept there,
This home of the happy to haunt,
Disturbing the rest of the demon who slept there,
The shadowy demon of Want
One fed on the strength of the household provider,
The other its substance consumed;
Gaunt Poverty entered that home, and, beside her,
Came Death. All its inmates felt doomed.
But, with a broad shield, on whose ægis was written
Protection, in letters of light,
This maid covered over the home of the smitten
And put all these shadows to flight—
Save one: While the mystical shield of Protection
Was ample and strong, it is true,
Yet the swift-winged arrows of Death, by direction
Of cruel disease, pierced it through.
But one who had wooed and had won the fair maiden—
His emblems the anchor and shield—
Fraternity, came with rich blessings full laden;
The wounds of the living were healed.

[Epilogue.]

You would have me tell you why the
Grand procession came to try the
Joys of this occasion! None so
Willing to oblige. I've done so;
Here Fraternity has builded
To his spouse an altar gilded
With her many virtues; near it
Gathered, all her clans revere it

A TREE OF IRON.—There is a curious work of art on the grounds of the State House at Columbia, S. C. It is an iron casting commemorating the South Carolina soldiers who died in the war, whose names are inscribed on brass tablets at the base. A correspondent says: "The success of this casting consists in its perfect imitation of the living palmetto—the favorite tree of South Carolina. We had heard of this statue in other places, but had never been able to believe the stories of the flexible leaves bending in the breeze, supposing this phenomenon an optical delusion, but such is really the case. The long, thin leaves of iron, lifelike, even to the hair-like fibers of the twigs and branches, wave tremulously in every zephyr, and the whole tree, painted artistically, has so close a resemblance to the real tree as to deceive the acutest observer at the distance of five rods."

Noe Valley Entertainment.

Noe Valley Lodge, No. 185, gave a musical and literary entertainment at Edwards' hall, corner of Jersey and Sanchez streets, on Tuesday evening, May 23d. The following programme was given: Piano solo by Mrs. Dr. McDermot, which was exceedingly well rendered by this accomplished lady; recitation by P. M. W., A. D. Thompson, after which the District Deputy, Jno. D. Thompson, who confined his address to the ladies in particular, was well received; after which Miss Maggie Carman gave a few selections on the piano; next came a reading by Bro. G. M. Lawton, which was exceedingly witty and called forth loud applause; German song by the Misses Hoehn, which was a rare treat to all present; recitation by Miss Mamie Fahey; Messrs. Clifford and Daly gave an exhibition of the light fantastic, which was encored; character song by Mr. Al. Lenoir, which was encored the second time; Bro. Eggleston was called upon to make a few remarks, which he accomplished in a pleasing manner; duet by Miss Coon and Miss Daley, accompanied on the piano by Mrs. Dr. McDermot, at the close of which they were recalled; sketch from boarding school life, entitled "The Red Chignon, or Worth vs. Wealth," by Miss Precise, Pincipal; Mrs. Lofty, Visitor; Hetty Gray, Fanny Rice, Lizzie Bond, pupils; Hannah Jones, new pupil—which was finely rendered; Mr. H. Daly gave a clog-dance, accompanied with a harmonica solo by Mr. P. J. Conway; song by Mr. Picket received a hearty recall, after which Bro. Powell, of Bernal Lodge, was called upon to give a recitation, which he responded to in an eloquent manner; after which Bro. Jno. D. Thompson gave a short illustration of his boyhood days on the flats. In the course of his remarks he stated that he used to see children washed ashore every morning (in explanation of which he said their mothers would rather wash them ashore than out at sea); stating that this concluded the programme, after which ice cream and refreshments were served in abundance. The whole concluded with dancing till an early hour. The hall was filled to its fullest capacity, and all will entertain a pleasant remembrance of Noe Valley Lodge, to which great credit is due the members for such an enjoyable time.

The following address was delivered by A. A. Eggleston, P. M. W. of Yerba Buena, on Tuesday evening, May 23d, at the quarterly social of Noe Valley:

Brothers and Friends:—Our Order teaches us and admonishes us "to lay aside all social distinction which title, wealth or political influence may have given us, and meet with fraternal sympathy and brotherly love, and grasp with cordial and heartfelt greeting the rough, honest hand of toil, as the unfortunate victim of poverty and distress, remembering that these distinctions are transitory and must fade away before the more perfect light of true and just understanding."

In fine, the real object of this association may be summed up in these words: To offer a mutual assistance to its members during life and protection to those dependent upon them when they have passed from this world to another; to efface from among men the prejudices of caste, the conventional distinctions of origin, opinion and nationality; to annihilate fanaticism and superstition, extirpate national discords and, with it, extinguish the pibroch of war. In a word, to arrive, by free and pacific progress, at one formula or model of eternal and universal right, according to which each individual human being shall be free to develop every faculty with which he may be endowed, and to concur heartily and with all the fullness of his strength in the bestowment of happiness upon all; and thus to make of the whole human race one family of brothers united by affection, sympathy, wisdom, fraternity and labor.

May we especially, in this noble land of freedom, be thankful to God that every honest man is noble, and needs no long descent from a blood-stained favorite of some grasping semi-barbarous monarch to give him equal rank among the proudest of those who rule the State and govern one of the mightiest nations of earth. By his heart and his intellect should every man be known and judged, and not by that which comes from an ancestor, however worthy that ancestor may have been. It was wise in the framers of the Constitution of our noble country to aim, as they did, at liberty and equal rights; to sweep away the worthless though gilded fabric which supports monarchy, namely, hollow titles and hereditary possessions. It belongs to the march of progress for every man to regard every man as his equal, and no man as his superior; and it is this true principle, instilled into the youth of this country, which makes each generation a generation of free men, and worthy successors of those who have passed away; and it is the proud feeling of independence and equal rights, united with a general education of the masses, which will perpetuate the liberties of this mighty country, till thrones, monarchs and titles shall be known as things that were and as belonging to an age of comparative barbarism and physical rule.

America has the proud distinction of giving to the world the first true liberty which mankind has ever enjoyed, and the time is coming I may not live to see it—but the time is surely coming when she will give benign laws to the down-trodden of the old world, as she now gives

hope; and when to say, "I am an American," will be a greater honor than to say, "I am an emperor." That day is, without doubt, yet far distant, but it will arrive. Its coming is marked by destiny, and in the order of the centuries. Already in the sacred balance of eternal justice is seen, each day, to diminish a portion of the errors of the people, and to increase the body of light, of principle, and those truths which are preparing the way for its triumph, and which, one day, will give assurance of its reign. And when this time comes, may the people of all the earth return thanks to the Supreme Master of the Universe for having given them the men who founded all the benevolent fraternal associations, without which progress and civilization would be unknown, not only to the A. O. U. W., but the Odd Fellows, Foresters, Knights of Pythias, Red Men, Druids, and, above all, to the oldest and grandest, the parent of all secret associations, Masonry.

Grand Excursion to Monterey.

The Workmen of San Jose, under the joint management of Enterprise and Mt. Hamilton Lodges, conceived the idea of having an excursion and picnic to Del Monte park, Monterey. Desiring to furnish a new hall, their plan was made to combine business with pleasure. Pursuant thereto, a contract was made with the S. P. R. R. and Mr. Geo. Schonewald on most favorable terms. For the first time Del Monte park was opened to a public picnic, and to the honor of the Workmen of San Jose, that privilege was not abused. H. G. McCormick, P. M. W. of Bernal, as conductor, took out the first train of 22 cars, with two powerful engines; this was followed by a train of 11 cars. There were over 2,000 persons for the picnic, and it seemed that one-half of the city had come out to see the trains move off amid the waving of handkerchiefs and cheers, the largest picnic party that has ever left San Jose was sent out under the auspices of the A. O. U. W. The people along the line seemed to join in the general enthusiasm as they gathered by the wayside to see the big picnic train for Monterey. A pleasant ride through Santa Clara valley to Gilroy, where the train was stopped to unload a few stowaways and allow Wm. Osterman, M. W., and J. M. Pitman, Recorder of Mt. Hamilton Lodge, to present Sister Jane E. Bowling, widow of our late brother, D. F. Bowling, a check on the Anglo-California bank of San Francisco for $2,000. This little incident illustrates the practical workings of our Order. Sister Bowling is without relatives in this State, in moderate circumstances, but her husband was a Workman, and a delegation of 1,000 called at her home to fill their agreement. From here the ride was through picturesque valleys, along the bayous, through sand dunes this side of Monterey, where the up-grade caught us, and the train rested.

Within five minutes the second section came puffing along, was flagged, and the first section was backed down, where a train of 33 cars and three engines was made up. Bro. McCormick, as master of ceremonies, stood on the top of the fence and in good style made his railroad signals.

With a whistle, a puff, and a shout from 1,000 manly voices, the hill was left behind, and the sleeping city of Monterey witnessed the longest passenger train that ever came to that city. The happy company were in El Monte park before 12 o'clock, where tables had been erected, and hot coffee provided in abundance by the Hotel del Monte. There were 2,000 on the ground; there was found food enough spread out for 5,000, and all strangers were invited to partake of the bounteous store. The WATCHMAN reporter had the pleasure of a choice meal with Bro. Brannan, presided over by his estimable wife.

After lunch, the company engaged in rambling on the beach, viewing the grounds around the Del Monte, the bathing houses and the quaint old city of Monterey, while others hired carryalls or buggies and sped away for Pacific Grove retreat and other points of interest around the bay of Monterey. At five o'clock, when the train started for San Jose, it was universally expressed that five hours had been most happily spent. It was worthy of notice that a large number had secured mementoes of their trip, by purchase or conquest. Several enthusiastic naturalists secured bones of the mastodon and whale, while others were content with shells, pebbles and sea-moss. The return trip was made in good time, without any serious accident. This excursion was one of the most successful of the season, affording a day of pleasure and profit. The San Jose Lodges will realize a net profit of over $500. The able committee who managed this celebration are deserving of the highest praise, particularly Bros. R. D. Berry, Geo. Fetherstone, P. M. W., and Wm. Osterman.

PREPARATIONS for the commencement of work on the seventy-mile gap of the Northern California and Oregon railroad are being completed, and the work will be begun immediately. The contract for the mason work on bridges and culverts was let to James Scoble, on Wednesday last. The work to be accomplished will take about two and a half years time to finish. The railroad is one of the branches of the Central Pacific railroad.

The Order in Nevada.

On May 9th the Grand Lodge of the A. O. U. W., for the jurisdiction of Nevada, Idaho, Montana and Utah, convened at the hall of St. James Lodge at Winnemucca. The Lodge was called to order by G. M., J. V. McCurdy and the following officers answered to roll: E. N. Robinson, P. G. M. W.; R. W. Wood, Supreme Representative; S. M. McCurdy, G. M. W.; A. G. Cowan, F.; S. W. Chubbuck, O.; W. D. Wager, Fin.; P. J. Dunn, G.; Wm. Sutherland, W.

The Committee on Credentials report the following representatives present:

Alpha Lodge—G. A. Fletcher, E. M. Robinson, J. Schanlanker.
Gold Hill—D. Thornburn, A. G. Cowan, H. W. Hand, S. W. Chubbuck.
Storey Lodge—Benj. Robinson, J. C. Harlow, F. M. Conn, P. J. Dunn, Wm. Sutherland.
Ormsby—Chas. F. Sharp.
Nevada—W. D. Wagar.
River—Jas. R. Shaw.
Lucille—C. B. Brierly.
St. James—W. T. Burns, T. C. Hanson.
Hope—J. A. Miller.
Anchor—J. D. Ludwig.
Unity—Harry Warren.
Esmeralda—D. T. Fox.
Capital (Montana)—J. A. McDougal.
Alta—A. S. Kellogg.
Park City (Utah)—E. Disbrow.

The Supreme Representative submitted his report for the year.

Complimentary Resolutions.

Representative Sutherland submitted the following resolutions, which were adopted:

To the Grand Lodge A. O. U. W. of Nevada:

WHEREAS, The Grand Lodge resolved at its last session to hold its second annual session in the town of Winnemucca, and

WHEREAS, In pursuance of said resolution this body is now holding its session in accordance therewith, and

WHEREAS, We, as a body and members of the Order, have been the recipients of the generous courtesies of both brethren and citizens, therefore be it

Resolved, That the thanks of this body are due and are hereby tendered to St. James Lodge for the ample and liberal provision made for our entertainment as a Grand Lodge, through its efficient and zealous committee, composed of Bros. Ferd. Reid, Chas. J. Currier, A. C. McAlpine, John McBride, T. C. Hansen and J. H. Giffin. And we cannot omit to make special mention of Supreme Representative R. W. Wood for his untiring efforts to increase our enjoyments by working in zealous co-operation with the above-named committee.

Resolved, That we warmly appreciate the labors of the brethren of St. James Lodge for the exceedingly pleasant and royal entertainment, both social, festive and otherwise, furnished us during our stay here.

Resolved, That for the many unnamed attentions shown us, and kindness bestowed upon us by which our gratitude has been stirred, and the utterance of which we find no adequate terms to express, we record our unqualified appreciation.

Resolved, That these expressions of this body be published by the Grand Recorder in the Journal of the session, and in the daily *Silver State*, and that copies be forwarded to all those who are hereinbefore mentioned.

Resolutions were adopted arranging with J. W. Kinsley, Grand Lecturer of California, to lecture in this jurisdiction, with a view to increasing the membership to 2,000, so that it may be set apart as a separate beneficiary jurisdiction, by which assessments will be cut down one-half.

The Committee on Distributions made their report.

J. W. Kinsley was introduced to the Grand Lodge as the Grand Lecturer of Nevada, Idaho, Utah and Montana, who made a short address, saying that he stood committed to getting a separate beneficiary jurisdiction for Nevada, Idaho, Utah and Montana within the next year.

An amendment was offered to the constitution, providing that investigations be had of all cases where deaths have occurred from diseases which indicated that the subordinate physicians had been negligent in discharging their duties.

Grand Officers Elect.

The following officers were elected: Grand Master, S. W. Chubbuck, of Gold Hill; Supreme Representatives, R. W. Wood, Winnemucca, E. N. Robinson, Eureka, J. V. McCurdy, Virginia City; Grand Foreman, W. Sutherland, Virginia City; Grand Overseer, J. A. McDougald, Helena, M. T.; Grand Recorder, D. Thorburn, Gold Hill; Grand Receiver, C. F. Sharp, Carson; Grand Guide, E. Disbrow, Park City, U. T.; Grand Outside Watchman, H. Warren, Paradise; Grand Trustee, J. R. Shaw, Dayton.

The officers were installed on Thursday, the 11th.

It was resolved to hold the next session of the Grand Lodge on the second Monday of May, 1883, at Eureka.

The Grand Master reported that 11 new Lodges had been instituted in the jurisdiction, and that the membership had been increased 476 within the year ending May 6, 1882.

Only four members had died in the jurisdiction since the first Lodge was instituted in March, 1879, and one of these was caused by an accident in the mines at Virginia.

The session of the Grand Lodge was harmonious throughout. Every officer was elected by unanimous vote, and Eureka was the choice of every member as the place for holding the next session.

At noon the Grand Lodge, having concluded its labors, adjourned for the term.

Entertainment.

While the Representatives of the Grand Lodge were in Winnemucca, interesting exercises were carried out and an entertainment given. The Representatives of the Grand Lodge, A. O. U. W., and of St. James Lodge of the Order marched in procession from their hall in Staunton's building to Centennial hall, where the exercises were held. The personnel of the Grand Lodge added to the very favorable opinion entertained by the public of the Order. The officers were assigned seats on the stage, with the representatives and members immediately in front.

The exercises were opened with an invocation by Rev. Mr. McKelvey, after which the band played an appropriate air. A quartette was sung by Messrs. Hanson, Moore, Currier and Hancock, at the close of which the chairman, Master Workman M. S. Bonnifield, made some preliminary remarks and introduced the Grand Secretary, J. W. Kinsley, who explained the workings and purposes of the Order in a concise address, which was listened to with marked attention by the audience. The oration was followed by a piano solo, exquisitely executed by Miss Fannie Hodges; a song, "The Mountain Maiden," was sweetly sung by Miss Emma Linn, Mrs. Hanson playing the piano accompaniment, and Miss Lida Dowell sang and played "The Spring Time."

Representative Robinson, in behalf of the Grand Lodge, thanked the people of Winnemucca for the many courtesies extended to the members, and, in a neat speech, presented St. James Lodge with a silver emblem, the shield and anchor, and also, in behalf of the Grand Lodge, presented Grand Master McCurdy with a solid gold badge, a beautiful and valuable emblem. Remarks appropriate to the occasion were made by Grand Master McCurdy, Representatives Harlow, Hand, Dunn, of Battle Mountain and Prof. Giffin, of St. James Lodge.

By special request Miss Linn recited "Beautiful Snow," and at the close of the exercises the seats were removed from the center of the hall and the floor cleared for a dance, which was attended by very many of the large audience. The music, by Buckner, Nicholas, Cody, Hancock and Kandulski, was good, and the dance continued until 4 o'clock the next morning. Meantime, a sumptuous supper was served at the Capital restaurant, to which many did ample justice.

HOW A WOMAN WAS INITIATED.—A woman of Bay City, Mich., disguised herself as a man and clerked in a store for a year, and then applied for membership in the Knights of Pythias and was initiated. During the work of the third degree her sex was discovered. It seems that in the third degree they have an India rubber rat and celluloid snake, which run by clockwork inside, and which are very natural indeed. They let them run at the candidates, to see if they will flinch. When the snake ran out at the girl she kept her nerve all right; but when the rat tried to run up her trouser's leg, she grabbed her imaginary skirts in both hands and jumped up on the refrigerator standing near (which is used in work of the fourth degree), and screamed bloody murder. The girl is a member of the Order, however, and there is no help for it. This affair may open the eyes of members of secret societies and cause them to investigate. One Lodge here, we understand, takes precaution against the admission of women by carefully examining the feet of applicants. If the feet are cold enough to freeze ice cream, the candidate is black-balled.

GOLD AND SILVER PRODUCTION.—A statistical abstract just issued by the Treasury Department contains statistics of the annual production of gold and silver in the United States from 1857 to 1881 inclusive. The figures show that the production of gold has declined from $55,000,000 in 1857, to $36,500,000 in 1881, and the production of silver has increased from nothing in 1857 to $42,000,000 in 1881. The total production of gold and silver in 1881 was $78,600,000, an increase of $3,000,000 over the year previous. The largest production recorded in any one year was in 1878, when over $96,000,000 were produced. The statistics of the production of gold and silver in California for 1881 are, gold, $19 000,00; silver, $870,000. In Nevada, gold, $2 700,000; silver, $8,860,000. Colorado, gold, $3,400,000; silver, $15,000,000. Oregon, gold, $1,000,000; silver, $80,000.

WE call attention to the California Bed Comforter factory of Bro. F. F. Du Rose, 29 Second street. There are no shoddy goods used in this factory and no Chinese employed. With an experience of 15 years in business in this city, and nothing but a superior quality of cotton batting used in his goods, he is prepared to fill orders at the lowest rates.

W. C. PRICE & Co. have opened a wholesale shipping and commission house at 320 Washington St. In their business they take in the whole range of California and Oregon produce and are doing a large business. They are a responsible house, and Bro. W. C. Price is one of those active, pushing young men who are bound to succeed.

A. O. U. W. Picnic at Rocklin.

One of the largest gatherings of the Order ever assembled at a picnic was seen at Rocklin, Placer county, on Friday, May 19th. A special train of 10 passenger coaches left Sacramento at nine o'clock, filled to their utmost capacity with the most prominent members of the Order and their families, arriving at the grounds, a beautiful grove adjoining the town, after a pleasant ride of about one hour and a half. A large crowd, by special train, had already assembled from Auburn, Newcastle and the adjoining towns.

At 11 o'clock the First Artilery band of Sacramento struck up a lively air, after which Bro. G. W. Roland, Master Workman of Rocklin Lodge, No. 196, and President of the Day, introduced Past Master E. M. Reading, of San Francisco, as the orator. Bro. Reading, in clear and concise language, reviewed the origin, trials, difficulties and final triumphs of the Order in the United States and California, in such a manner as to draw frequent applause from his audience. He closed his interesting address of 45 minutes by an earnest appeal to the members present to be faithful to the obligations they have voluntarily assumed, and by so doing they would assist in making the Ancient Order of United Workmen the grandest institution under the sun, and one calculated to do the most good. At the close of the address, three cheers were called for and given for the speaker. The large and well-arranged pavilion was then cleared for dancing, which was kept up till a late hour in the evening. Every arrangement had been made and industriously carried out for the comfort and enjoyment of the visitors, and everybody was happy and appreciated the efforts made by the people of Rocklin, and especially the members of the A. O. U. W., to make their anniversary a success in every particular.

Address of the President of the Day.

Mr. Chairman, Ladies and Gentlemen:—We have assembled here to-day, not only for the purpose of social intercourse and enjoyment, not only to greet each other as friends and brothers, not only to extend the hand of fraternity and good fellowship, not only to rid ourselves for the hour of the busy scenes of a great city and breathe the pure air as it comes from yonder mountains, laden with the perfumes of the wild flowers of this beautiful valley, but to aid in a practical manner the Relief Committee of the A. O. U. W. of San Francisco. We have come here to-day in full and heartfelt sympathy with the objects of the committee, and to show, by the presence of this large outpouring of men, women and children, that whenever and wherever the cry of distress is heard from a member of the A. O. U. W. or his family, then, as now, thousands of sympathizing hearts will respond to the call for relief, and as many hands will vie with each other in deeds of benevolence and love. Five years ago the General Relief Committee was organized in San Francisco, for the purpose of affording relief to the destitute and distressed members of the Order. The work in which it is engaged is of necessity of a private character, and it is not necessary to trumpet its efforts in behalf of the sick, dying and the dead to the world, or to expose the destitute circumstances of a brother or his family. It is sufficient for me to say that through the exertions of the Committee much suffering has been relieved, the destitute have been cared for, the sick administered to, the dying consoled and the dead decently buried. Much of this work has been done for members of the Order not of this jurisdiction, but members, nevertheless, of our great fraternal family, and so long as they could make themselves known to us as such, we cared not whether they hailed from the East, the West, the North or the South.

Labor of this kind can not be effective without money. With a view of realizing some pecuniary benefit for the Committee in their benevolent work, and to bring the members of the Order, their families and friends together we have assembled to-day.

Those of you, my friends, who are not members of the Order, those of you who have not penetrated the veil that separates us from the busy world as a fraternal organization, I bid you, particularly, a most cordial welcome, welcome to a deeper sympathy with us in the great work we are doing for the comfort of the widow and the education of the orphan, welcome, thrice welcome, to a more perfect knowledge of those ceremonies which I hope will soon make you members of that army of true and unselfish men marching under the banner bearing the watchwords Charity, Hope and Protection.

It is not my province as President of the Day to elucidate the principles of the A. O. U. W., as that part of the day's programme has been left for one selected for that purpose. I now have the pleasure, ladies and gentlemen, of introducing to you not only the Orator of the Day, but also the Grand Master of the Order in California, Bro. W. H. Barnes.

BRO. H. BUEHMAN, photographic artist, of Tucson, Arizona, has forwarded us a large picture of the church of San Xavier Del Bac, near that place. This church is in a good state of preservation, although over 120 years old. Copies can be had with description by addressing as above.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi annually in advance. If errors or omissions are noticed, please write the office direct.

CALIFORNIA.

OFFICERS OF GRAND LODGE.

CLAY W. TAYLOR, Past Grand Master Workman..Shasta

Santa Barbara Roses.

Mrs. Col. Otis writes the Los Angeles *Times* an appreciative account of the recent rose fair in Santa Barbara, which we take pleasure in reproducing: There were about 300 varieties of roses displayed, not so large a number as usual, but still enough, when added to the infinite variety of other blossoms, for artistic effect and brightness. The large audience-room of the theater was thrown open for the exhibition. Entering, this is the picture that greeted the eye. Spreading fan-palms and branches of the graceful date-palm arranged in pretty and quaint designs upon the walls; long, drooping festoons of evergreen encircling the entire front of the galleries, and at the points where they were caught up, hanging baskets filled with trailing ivy and brilliant flowers; the pillars supporting the galleries trimmed with wreaths formed of the slender sprays of the pepper-tree. Stately pagodas 15 ft. in height, with roofs of evergreen and spires of scarlet geraniums, the sides formed of roses, pink, and white, and red, of creamy roses with blushing hearts, of roses yellow as gold, and roses of crimson dyes, and under the open arches, banks of roses piled till the hand could lose itself in their depth; alternated by beds of sweet peas of every shade and hue in which their fragrance blossoms, and petunias, with their rich

Kaleidoscope of Colors,

And in the center a magnificent pyramid of calla lilies. Then there were tall flower-built temples, carpeted with green mosses and ferns, with miniature gardens of blossoms on every hand, and glass globes filled with pretty gold-fishes, shining like sunbeams in the water; massive crosses of evergreens mingled with the rich, glossy, deep-veined loquat leaves, with center of pure white flowers; a tall easel covered with drooping ferns and flowers, and in its center a landscape formed of green leaves and flowers, with an adobe building represented by bits of bark; along the sides of the room great

Glowing Banks of Roses,

Of every shade and color, from pure white to deep royal red; from those with creamy petals touched with blushing pink, to those of a deep reddish orange, glowing and warm as a gorgeous sunset; singing birds in gilded cages among the flowers; large jars filled with pure white callas, date palms heavy with blossoms, orange buds and blooms; pretty striped grasses and tall bunches of feathery pampas plumes; richly dressed ladies, and children in bright colors, like happy butterflies flitting hither and thither—a picture bright enough for the old garden days when the world was young. In the center of the room were long tables covered with flowers of every description and every clime, arranged in bouquets, banks, pyramids and various beautiful and curious devices. Among other bright things, I noticed a new variety of the

Passion Flower.

It was much larger than the ordinary purple one, and was of a deep rose color. Near it was the flower of the *grevilla robusta*, with its long, slender, orange-colored petals rising like a crown above its green leaves. Camellias were there in rich profusion, red and white, with their smooth, waxen-like petals. The red blossoms were gathered from a bush that has yielded 3,000 of these beautiful flowers since the 1st of January last. Great masses of fuchsias, of every known shade and color, dropped their graceful heads among the other plants, and calla lilies, white and pure, were arranged in huge bouquets and pyramids. Immortelles, pink and white, lay

Like a Blush

Upon the tables, while the meek-eyed pansies nestled in their velvety softness in the fragrant bloom about them. Daisies white, with golden hearts, nodded to the dainty garden pinks, and the orange-lipped nasturtians gleamed like a sunset cloud beside the pale white of the clustering Japanese snowballs. One of the tables was beautifully fringed with the delicate spray of the tree-fern, and close by it was laid a leaf and pretty blossom of the fan-palm. Cactus blossoms were shown in rich profusion, and the showy purple and crimson blossoms of the *cineraria*, and beside them the tulip shaped orange-colored blossoms of the *trittania*. Masses of laburnum looked into the faces of scarlet and pink poppies that nodded sleepily above the pretty blossoms of the *exocharda grandiflora*. Pinks and sweet peas mingled their perfume with the odor of the Eastern lilac. *Chorezemas ilicifolia* were clustered near the shining aloes, and a pile of strange-faced purple blossoms. There were two beautiful Santa Barbara

Seedling Roses,

Which challenged particular admiration. One was of a creamy white, large and many-leaved—child of a red rose—yet it was as fair as a lily, and rich in fragrance. The other, and smaller one, was a lovely blush rose, its delicate pencilings of finish most exquisitely shaded. Near by were the long, flowering sprays of the tamarisk, an African plant, with small, delicate, pinkish-brown blossoms; and not far from these, a stately golden Marguerite daisy showed its head. Azalias and grand crimson-colored, velvety-looking lilies, with their rich tracery of old gold, clustered in a brilliant group, and tri-colored amaranths, petunias, chrysanthemums and perfumed mignonette kept charming company. One private table alone showed

Seventy Varieties

Of tea roses. They were from a garden containing 127 varieties of the tea rose. From another garden were great flowering "snowballs," 18 inches in circumference; and a strange freak of nature was shown in a double cala lily, about twice the size of the single flower. Among the many charming floral devices was a dove, formed of the tiny white Banksia roses. It was suspended by a slight wire frame from the ceiling, its white wings spread as if for flight, and in its mouth the olive branch of peace. On the table beneath it was a large tablet, formed of red, white and pink verbenas, with the name of the florist in delicate evergreen sprays. Near this was a beautiful basket of choice roses of every shade, size and color, and resting upon its front a star made of white verbenas, with center of yellow immortelles. like

A Pale Gleam of Light.

At a little distance stood a cross of pure white roses, and beyond a large anchor of royal purple bloom. Upon the end of the table lay a large horse-shoe, formed of the bright yellow flowers of the Scotch broom. Upon another table was an exquisitely beautiful lyre about five ft. and a half in hight (a native of California) the upper part formed of deep crimson roses, the sides of roses of varied hues, the strings of slendor branches of the Banksia rose, with the tiny white blossoms, like hanging bells, pendant from the stalks. There was but one sign of esthetic craze in all this wide display—

One Solitary Sunflower,

Bright and large-eyed, peered from the mazes of bud and blossom, august in size, and yellow as the face of the sun it bares. In spite of all burlesques and "crazes," who does not love that watching, faithful sentinel of the sun?

Relation of Brain Work to Blood Supply.—Even if it is true that the larger and healthier physique affords more blood for brain use, it does not follow that the larger the supply the greater the amount of brain work possible. The argument assumes that the brain has no limit to its activity, except in the quantity of blood that can be prepared for it. But it needs no scientific education to know that there are other influences which limit the thinker's activity, and that these limitations are somewhere in the mysterious recesses of the brain, or in the forces of which the brain is the organ. The physical health of the brain worker may be perfect, his digestion unimpaired, his power to assimilate food the same, and yet he may not be able to concentrate his thoughts or carry on a complicated train of reasoning. The defect is not in his body; that is as healthy as ever; nor is it in any of the processes of blood making—these go on as before. The trouble lies in the brain itself, whose capacity for work is measured by some hidden standard of its own, and which gives warning when a cessation of brain work is imperative. The body is a furnace whose power of consuming fuel is greater than the capability of its boiler, the brain, to generate power. To keep the latter in good working condition, something more is necessary than building and feeding the fires. A supplementary but important consideration is, whether the steam beyond a certain point will not be productive of unpleasant consequences in the form of an explosion.—*Popular Science Monthly.*

Melting Point of Fats.—The method adopted by the "Society for the Mineral Oil Industry," in Halle, is to be preferred for the safest and most accurate results above all other methods. Instead of determining the melting point they use the solidifying point as a basis for their results. The following method is recommended as giving accurate results for the direct determination of the melting point: A cylinder having thin walls is heated in a beaker containing water or oil. In the cylinder there is a thermometer whose bulb is only partly dipped into the fat. The temperature is determined at the moment when the fat begins to become transparent.

The Thousand Wells.

Our engraving gives a glimpse of a very interesting region on the Colorado river in northern Arizona. It is, as may be seen, a wild region, the surface being deeply furrowed or eroded, as the geologists say, and shows the work of great grinding and wearing agencies in the years agone. This piece of landscape includes a few of many remarkable natural formations known as the "thousand wells." They are located on the western slope of the Echo cliffs. Powell says this slope is composed of homogeneous but rather friable sandstone, and the rain-water rills have corroded deep channels, interrupted by many pot holes. After a shower these pot holes are found filled with water. There is a place near by the trail which passes from the mouth of Paria to the province of Tusayan, where there is a collection of these water-pockets, known as the thousand wells. These wells are used by the Indians as water sources during their wanderings, but the chosen abode of the Indians is on the eastern slope of Echo cliffs, where numerous springs are found which are their famous watering places.

Tornadoes and How to Avoid Them.—The Signal Service Bureau has in press a monograph, by Sergeant Finley, containing a review of the observations of 600 tornadoes, with generalizations from the recorded facts and suggestions as to the methods which ought to be followed in the investigation of such storms. The storm studies have occurred during the past 87 years in all parts of the country. The storms occur most frequently from five to six in the afternoon, although there is no hour of the day that has been entirely free from them. The average width of the path of destruction is 1,085 ft., and the storm cloud runs with a velocity of from 12 to 60 miles. The wind within the vortex sometimes attains a velocity of 800 miles an hour, the average velocity being 392 miles. Among the most valuable suggestions of the paper are those with reference to the peculiarity of the movements of tornado clouds, containing rules for arriving at their violence. A tornado cloud always has a center, and it always moves forward from west to east. It may, however, sway from side to side in its progressive movement. Changes in motion are sometimes very sudden. In the event of a sudden change the observer, who is east or south of east of the storm, should move quickly to the south. If he is northeast he should move to the north. If within a very short distance of the cloud the observer should run east, bearing to the south.

THE REGION OF THE THOUSAND WELLS, ECHO CLIFFS, ARIZONA.

A Secret Telephone.—The National Secret Telephone Co. recently filed articles of incorporation in Albany, N. Y.; capital $5,000,000, with power to increase it to $10,000,000. The route of the line is from New York to Albany, thence to Buffalo, with the right and privilege to extend the route to other States and Territories. The company, which has not yet been fully organized, was incorporated to manufacture and put in operation a telephone invented by Prof. J. Harris Rogers, of Washington. It is called the "secret telephone," because when two persons are talking no one else, although he may be on the same line, can listen to the conversation. The inventor claims great advantages for his instrument over the ordinary telephone. Instead of being suspended, the electrodes float in mercury, which gives distinctness in sound and enables the telephone to be operated at long distances. There are many other minor differences between the "secret" and the common telephone, but the advantages urged are the secrecy and the superiority in transmission. In an experiment in Washington, conversation in a low tone at a distance of 25 ft. from the transmitter was heard plainly two and one-half miles away.

A Wife's Portemonnaie.

When Pat was asked why he was thinking of getting married, he answered: He could almost support himself, and it would be a poor woman that could not do a little toward it. Many a man besides Pat has been married for the same reason, but has not been honest enough to own it. No doubt Kathleen will be much happier with her honest husband than she would if he had made her believe he was worth his weight in money. What if she does have to go out to work, doing other people's drudgery? She will have the pleasure of receiving pay for it, and that will be more than some of her more favored sisters do. I have known a woman to do the same amount of work in a year that her neighbor across the way hired done at $3 per week, besides caring for a large family of children. And what wages did she get? Just enough to keep her from freezing, and not a glove or collar ever found its way to her wardrobe. And yet her husband was just as well off as her neighbor's; "but," said he, "I never allow my money to slip through my fingers without knowing what it goes for." When there was anything needed in the house he got it, and if his wife was not suited, whose fault was it? He said that Cheap Johnny was his patron saint, and he was too short-sighted to see that the best was the cheapest, too bigoted to believe that his wife's judgement was better than his in any such matters. I never knew her to have a dollar she could call her own.

Talk to him about letting his wife handle a share of the profits of the farm, he would tell you that women don't know how to use money. If they don't, it's for the same reason that the slaves did not know how to use their freedom when first emancipated. It was because they never had had it to use.

I have no doubt but that many farmers who read this have been in the habit of dividing the money received from the proceeds of their united labor, but there are hundreds who cram the well-filled pocketbook down into the deepest pocket, with a well-satisfied air that seems to say plainer than words: "It's all mine," and long before all the plans he has been forming for its use are carried out the poor pocketbook looks as though an elephant had stepped on it.

Brother, try a new plan; let your wife help invest that money.—*Kansas Agriculturist.*

A New Accumulator.

Since the Faure accumulator, otherwise Plante's improved secondary battery, saw the light of day, says the *Electrician*, numerous patents have been taken out by not less numerous inventors, and we may expect all the electrical firms or companies to shortly have each its own accumulator.

For some time past, indeed, periodical announcements have been made respecting some new accumulators which were said to give wonderful results and leave far behind them the now well known Faure apparatus. These announcements, for some unknown reasons, persisting in existing on paper only—caused at last the people interested in the success of the Faure accumulator to wake from their lethargy and write in a short but well-meant letter what they thought of that kind of anonymous announcements; their theory upon the subject being of the same nature as that of the naval secretary who thus expressed himself on one occasion in Parliament: "Men," said he, "disputed, and perhaps would ever dispute, as to the best type of battle ships; but a good ship that was armed and afloat was better than an ideal ship which was still on the stocks."

But still another great improvement in electric storage or accumulating batteries was again announced about a month ago, which is said to be possessed of five times the durability and two and a quarter times the storage capacity of the Faure accumulators. The following advantages are also claimed in favor of the new apparatus: To be of such a practical construction that they can be readily renovated when necessary, without waste of material; to cost less than the Faure accumulator to manufacture; to be of great electrical capacity, each cell of about .43 of a cubic foot in size, and consisting of about 60 lbs. of metallic materials; is capable of containing about 400 amperes, and of delivering during eight hours a current of 50; each cell is said to represent over one-horse power of energy for one hour.

In this particular instance we are promised more than mere assertion, as the new accumulator has been patented in this country, and will soon be put into practical use by an electric light company.

Music on Bridges.—Bands of music are forbidden to play on most of the large iron bridges of the world. This is due to the well-known phenomenon that a constant succession of sound waves, especially such as come from the playing of a good band, will excite the wire vibrations. At first these vibrations are very slight, but they increase as the sound waves continue to come.

Commissioner of General Land Office McFarland has issued a circular letter inviting all holders of certificates of deposit to forward the same to the General Land Office, that their genuineness may be attested. This is done because of the number of fraudulent certificates now on the market.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and hand some," and first class in all respects—to the benefit o both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞ For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, - - - June 1, 1882.

What We Want and What We Don't Want.

The Supreme Lodge is about to meet. Before another issue of the WATCHMAN some of the most important matters that have ever come before the Order will have been disposed of. There are some things that need to be done, and several things proposed that ought not to be done. It is natural that different individuals should see things differently, and natural that aggregations of individuals into jurisdictions should likewise differ. In what we have to say we shall endeavor to set forth as clearly as we may the feelings of the jurisdiction of California on certain matters of vital importance.

1. We want the dignity of the Supreme Lodge vindicated, and the actions of the Supreme Master in the Iowa matter unequivocally endorsed.

2. We want the Supreme Lodge to disincorporate, thus setting an example to Grand Lodges in that regard. Corporate powers for any of these bodies put them at a disadvantage in the courts that promises ten-fold more of evil than of good. We would, if we could, make litigation impossible between the organization and its members, or between different branches of the organization. If we live at all, we must live by the inherent strength of fraternal law alone, and we should not foolishly put it in the power of foes from within or foes without to weaken these laws by easy access to the courts of the country. A person who is not willing to trust himself in the hands of a fraternal society, looking to it alone for even-handed justice, had better never join. Such a society made of such stuff would be the embodiment of weakness and disturbance. Therefore we would like to see not only the Supreme Lodge throw off its corporate character, but we would like to see all Grand Lodges do likewise; and furthermore, we would like to see the Supreme Lodge pass an act preventing all Grand Lodges from incorporating in the future, and requiring that a covenant for such purpose should be incorporated in all charters for all Lodges, of whatever kind, hereafter formed.

3. We want the law in relation to medical examinations amended so as to allow the J. W. degree to be conferred before the Medical Examiner's report must be passed upon by the supervising authority. The reasons for this are of so important a character that we urge them with all the earnestness of thorough conviction. They are, first, a saving of much expense; second, a saving of time; third, the fixing of the chief responsibility for the character of the membership on the subordinate Lodges, where it rightfully belongs, instead of on the supervising authority, where it does not belong. Our doors should be of easy entrance to the worthy, but like the eye of a needle to a camel for the unworthy. Our present arrangement is not of this character. Good and desirable men look with disgust on our circumlocution contrivance, but the other kind are content to bide their time, if confident of a final accomplishment of their aims.

4. We want the voting power in the Supreme Lodge to approximate the strength of the constituency represented. The present law is unfair, and must always give dissatisfaction to the Lodge jurisdictions. Make it just, and then there will be no reason for complaint on that score.

5. Improve our ceremonials. We want a good Grand Lodge degree and a good Supreme Lodge degree. Both should be short, beautiful and sensible. Our Ritual is not to be despised, but our installation ceremony should be revised, or, better, made anew. We live in the 19th century. Our Order is essentially democratic in spirit and form of government. Its ceremonials should be in full accord with the genius of the age.

6. There should be a readjustment of the maximum of assessments fixed for each jurisdiction under the Relief Law. Such readjustment should be based solely on the experience of the A. O. U. W., and on nothing else. What the death rate may be amongst people in general, or in any other Order or institution, is no consequence to us. If we do our work better or worse than somebody else, we should reap the benefit or suffer the disadvantage, as the case may be. Let's make things as just as possible to one another, so that no just ground of complaint can exist.

7. We believe the Degree of Honor could and should be made a source of great strength to the Order, instead of remaining a source of weakness as now. In our judgment, the scheme presented to the Supreme Lodge at its last session cannot be greatly improved upon. If the Supreme Lodge will adopt that at its coming session, it is not too much to predict that not less than 50 degree Lodges will be organized in this jurisdiction alone the coming year, with an average membership of 40 beneficial members. Several other jurisdictions would, no doubt, do as much as we. What earthly reason is there for longer delaying in this important matter?

8. Why not provide for the extension of the Order into foreign countries? It would not weaken, but strengthen us at home, provided such Lodges should bear their own burdens and execute the laws within themselves. This matter has been twice before the Supreme Lodge, but both times put aside for far less important matters, in our judgment.

These things we want have before been set forth in these columns, and we repeat them now in the hope that, being fresh before the members of the Supreme Lodge, all, or some of them, may be favorably considered and acted upon accordingly.

But there is one thing to come before the Supreme Lodge for action that we do not want, to wit, graded assessments. The only argument that is or can be urged in favor of the plan is equity; but that any graded assessment plan is more equitable than that of "level assessments" is yet to be demonstrated by actual experience. Neither level nor graded assessments are in any considerable degree equitable. One plan may be a little less unjust to the individual than the other, but nobody can tell which, by any facts within our reach. Until we know more than we do now, it would be the utmost hight of folly to change a simple plan that has proven signally successful for some complicated affair, based solely on a theory that has 99 chances to be wrong where there is one to be right. Let well enough alone wherever we find it!

GRAND RECORDER PRATT'S statement for April shows that 13,643 Master Workmen paid the April assessment in California. The Lodges failing to send at date of making up report number about 360 members, which gives as the number of Master Workmen in good standing and square on the books as fully 14,000. Add to this the percentage of Junior Workmen and those in a state of temporary suspension, and it will give not far from 15,000 members in California.

NEW YORK had 15 deaths reported in her last assessment notice.

Supreme Lodge History.

The Supreme Lodge, A. O. U. W., has held nine annual sessions in as many different cities of the United States, namely, Cincinnati, Pittsburg, Indianapolis, Covington, Chicago, St. Louis, Nashville, Boston, Detroit.

The first session was held at Cincinnati, Feb. 11, 1873, three States only being represented—Pennsylvania, Ohio and Kentucky, with four Representatives each.

The Lodge was called to order at 10:30 A. M., and W. W. Walker, of Pennsylvania, was elected the first Supreme Master Workman, and W. H. Comstock, of Pennsylvania, Supreme Past Master Workman. The session lasted five days.

The second session of the Supreme Lodge was held at Pittsburg, March 10, 1874, W. W. Walker, S. M. W., presiding, and lasted five days. At this session six States were represented, with about 27 duly elected Representatives, and 16 Past Grand Master Workmen. The following were the States represented: Pennsylvania, Ohio, Kentucky, Indiana, Iowa, New York.

The third session convened at Indianapolis, Indiana, March 16, 1875, with R. D. Handy, of Kentucky, Supreme Master Workman, and continued five days. Six States were represented at this convention, the same as before mentioned.

The fourth session took place at Covington, Kentucky, March 21, 1876, J. M. McNair, of Pennsylvania, having been elected Supreme Master Workman at the last session. Six States were again represented, Indiana having been suspended and Illinois admitted.

The fifth annual session was held in Chicago, from Mar. 20th to 28th, 1877, C. Shryock, of Kentucky, succeeding in the office of S. M. W. At this session 10 States were represented.

The sixth annual session took place at St. Louis, Mo., March 19, 1878, and lasted six days, 13 States being represented. Samuel B. Myers, of Pa., S. M. W. At this session the total membership reported was 35,886.

The seventh session was held in Nashville, Tenn., March 18th to 27th, 1879, M. W. Sackett, Pa., holding the office of S. M. W. At this session 18 States were represented. Total membership as reported, 62,493.

The eighth annual meeting of the Supreme 1880, and lasted eight days, Jno. Frizzell, of Lodge convened at Boston, Mass., March 16, Tennessee, having been chosen S. M. W. at the last session. At this session were represented 20 States, including Ontario, Canada. Total membership reported, 78,414.

The ninth and last annual session of the Supreme Lodge took place in Detroit, Michigan, June 7 to 14, 1881, S. M. W., Roderick Rose, of Iowa. At this session 21 States were represented by 61 Representatives and a large number of P. G. M. W's. The total membership was reported as 94,222. Death losses for the year had been paid to the amount of $1,305,887.

The tenth session of the Supreme Lodge opens at Cincinnati, Ohio, on June 6, 1882. We shall give an abstract of the proceedings, and have made arrangements for a full report of all there is of general interest transpiring.

Lodge Life.

"Lodge life" has many charms for a man given to serious thought. The question is sometimes asked, "Are Lodges beneficial to a community, when considered from a moral standpoint?" The answer is invariably in the affirmative; a young man can do nothing better for his own advancement in life than to join the Lodge of some secret society. There he can learn parliamentary law, and many other things of practical advantage. He sees laws and rules made, revised and enforced. He gradually takes part in debate, until he is full master of himself when speaking before an assembly, and in time develops the whole of his ability as an orator. He occasionally has committee work to perform which gives him practical experience in business; in time he receives an office, and by promptly fulfilling his duties may become presiding officer, and can conduct the business of the meeting with firmness and impartiality. He learns to love his Lodge as a second home, for there he meets the pleasant faces of the other members, all extending a brotherly hand of greeting,

The fact that it takes a man's evenings should not be an obstacle, for there is no better way to spend time than by being in the company of men who are aiding in relieving distress.

From a financial point, the amount of dues paid into a Lodge is so small that it never becomes a hardship, if promptly paid.

The Order in Utah.

The jurisdiction of Nevada, Utah, Idaho and Montana has sent J. W. Kinsley, D. G. M., into Utah for the purpose of establishing Lodges, and he is now at Salt Lake for that purpose. There are at present nearly 1,000 members in the jurisdiction. The only Lodge in Utah at present is located at Park City. It has a membership of 40 members, accumulated within the past few months. Montana has six Lodges and Nevada 15.

The Salt Lake *Tribune*, in speaking of the arrival of Deputy Kinsley, says: The rapid growth of this Order in California is unprecedented in the history of fraternal societies. It was first introduced into that State some five or six years ago, and to-day it is exceeded by the Odd Fellows only, and if its increase continues in the same ratio for the future, it bids fair to stand at the head of the Golden State.

The total cost of carrying the $2,000 protection offered by the A. O. U. W., has varied from $16 to $24 per year, and that sum, paid, as it is, in one dollar assessments, has never been missed from the exchequer of its membership.

When the Grand Lodge of Nevada, Utah, Montana and Idaho was formed last year, the membership in this jurisdiction was about 400; more than 100% of increase was registered last year. Samuel W. Chubbuck, of Gold Hill, Nevada, is the present Grand Master Workman. That gentleman also occupies the positions of Senior Grand Warden of the Grand Lodge of Masons, and Deputy Grand High Priest of the Grand Chapter of Royal Arch Masons of Nevada, which facts would indicate what is claimed by the Workmen, that they are not competitors of Masonry, Odd Fellowship, or any of the older Orders, but are their best and most beneficial allies.

The day after the above article appeared the *Tribune* said:

The *Tribune's* article of yesterday on the A. O. U. W. caused considerable comment about town. Deputy Grand Master Workman Kinsley received calls and letters from several of the leading citizens of this city inquiring as to its plan of action, and the prospects are good for its early and favorable introduction here. Many have heretofore supposed that this Order was in some way connected with that branch of California politics that had its origin, day and death on the sand lot. Others have assumed from its name that it was a labor union organization. Neither of these suppositions is correct. It is entirely free from politics or any other combination, save only one for the protection of its members and their families. The term Workmen in its title alludes solely to the feature in its objects whereby it seeks to encourage useful industry. The price of admission for charter members has been fixed at $15, which includes entrance fee, medical examination, and first deposit in the beneficiary fund.

It is probable that three Lodges may be instituted in Salt Lake. Charter lists for applicants are in the hands of Dep. Hamilton and Dristrow. The latter is an officer of the Grand Lodge of this jurisdiction.

Dr. M. Rockman, who is the Senior Past Master Workman in this jurisdiction, having filled that position in Alpha Lodge, No. 1, of Eureka, Nevada, and with Dr. W. H. Searles, who is also the Senior Past Master Workman of Home Lodge, No. 20, of this jurisdiction, of Wisconsin. Each of the parties named above will be furnished with circulars giving full particulars of the Order.

GRAND LECTURER.—In pursuance of a resolution adopted at the late session of the Grand Lodge, at Winnemucca, J. W. Kinsley, Grand Lecturer and Deputy Grand Master Workman, left yesterday for Salt Lake City, Utah. His duties require him to organize new Lodges, and, if possible, increase the membership of this jurisdiction to 2,000. The present membership of the Grand Lodge of Nevada is about 900. Mr. Kinsley will spend the coming three months in Utah, Idaho, and Montana.—*Silver State.*

THE past of fraternal societies, says the *Call*, shows that about one in every thirteen who join an Order die members of said Order. That the average duration of membership is about seven years. These 12 that go out will pay an average of $150 each, and then relieve the Order from all responsibilities, so far as they are concerned. It will not take much figuring to tell where the $2,000 comes from to pay on the death of the one who remains in.

SUPREME REPRESENTATIVES.—Bro. Jordan has left for the East to attend the Supreme Body, and G. M. Barnes will leave before long. P. G. M. Clay Taylor, being unable to go, resigned as Supreme Representative, and M. T. Brewer, of Sacramento, was appointed in his stead. For various reasons Mr. Brewer was compelled to decline the honor, and Grand Recorder Pratt has been appointed to fill the vacancy.

THE widow of our lamented brother, Owen O'Neil, lately deceased, has received, through the hands of the Committee of Olympic Lodge, the sum of $2,000.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

Wm. C. Flint, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

The new law requiring all Medical Examiners' reports to be passed upon before any of the degrees of the Order can be conferred on a candidate does not seem to meet with much favor in our Lodges. It will work better when better understood, but, in no event, can work so well as our former arrangement. Still, as it is the law, let us make the best of it we can. When an application comes before the Lodge, appoint the committee of investigation, and then send the Medical Examiner's report at once to this office for action of the Board. In most cases the paper can be returned by next Lodge meeting, and then the committee can report and a ballot be had at once. But don't make the mistake of supposing that the approval of the Board is or should be conclusive as to the fitness of a candidate in any particular. It is only an evidence that the physician's certificate shows a candidate to be eligible under the rules as to physical conditions. But no supervising authority can properly reject if the physician's report is a good one, unless informed in some other way than is provided under the law; and approval does not in any manner relieve the Lodge of its responsibility for the admission of bad material. Each Lodge must guard its own doors, or our most important safeguard will be broken down. The chief good of any supervising power is simply to see that, so far as possible, each Lodge does thus perform its duty.

Our membership in good standing May 1st was 14,404, a gain over the previous month of 247. Very soon we shall score 15,000. New York is a little over 2,000 ahead of us, and Pennsylvania, the mother State, about 1,500 behind.

It is unpleasant to scold, but Recorders are, many of them, altogether too careless about sending in their monthly reports. We want them early in each month.

Lodges contemplating the institution of Degree of Honor Lodges are advised to await the action of the Supreme Lodge in relation to the degree. That body meets on June 6th, and will no doubt take some positive action in relation to this degree. The business has been neglected too long.

The Iowa Situation.

We are without any late advices from Iowa, but on April 21st last, the Deputy S. M. W. and provisional Grand Master stated the number of Lodges that had given in their adherence to the Supreme Lodge as 17; and it was claimed that over 2,000 loyal members could be mustered in the State. A new Grand Lodge has probably been organized before this, and elected Representatives to the Supreme Lodge. If so, no doubt a separate beneficiary jurisdiction will very soon be proclaimed for Iowa, and then we shall see how long a spurious and disgraceful organization bearing the honored name of our Order can maintain an existence. Relief assessment, No. 2, had not been levied on Iowa for the reason that there was no Grand Lodge on which to levy it. Of course, the first business of the Supreme Lodge will be to straighten out business in Iowa, which no doubt will be done wisely and well. So mote it be.

A. O. U. W.—A castle built upon the rock. The winds may blow, the rains descend, and the floods come;—it cannot fall. The Workmen founded their Lodge upon the bedrock principles of charity and brotherly feeling, and its name will be written on the pages of history—bright, glorious, immortal. They heard the wail of the fatherless, the dying moan of the poverty-stricken widow; their hearts went forth and held communion among themselves; they joined their horny hands in faith; and from a thousand homes bereft went up the thanks of the widow and the orphan for the substantial aid thus timely forth from this alliance sprung.

The Grand Master has donated to Excelsior, No. 126, for its library, 30 valuable books. This will swell the number to over 500 volumes, making it one of the best small libraries in the State.

From Grand Master Workman.

[Official.]

Office G. M. W. of California,
525 Montgomery St., S. F., Cal.

To the Order in the State:—For the prompt dispatch of all business pertaining to my office that may present itself during my absence from the city, attending the session of the Supreme Lodge at Cincinnati, full and complete arrangements have been perfected.

Letters, requests for dispensations, queries, appeals, etc., should be addressed as above, and will receive immediate attention.

Fraternally, W. H. Barnes, G. M. W.

District Deputies.—To fill vacancies the Grand Master has appointed the following deputies: D. J. Houghton, Monterey; W. J. McKay, District No. 2, F. S. Polland, District No. 3. E. P. Fish, District No. 5, San Francisco; E. W. Bushyhead, San Diego.

Soiree Musicale.

The soiree musicale given by the members of the Raymond Excursion Party in the grand parlor of the Palace hotel on Tuesday evening, May 23d, 1882, was a recherche affair. A large and select audience was in attendance, completely filling the spacious room. The following programme was given: Duet, "Come Home," Rev. C. D. Barrows, of the First Congregational church, and Mrs. Alice J. Osborne. This was a highly artistic and pleasing effort. Solo, "Beautiful Bird Sing on," Miss Sarah E. Googins, and for an encore sang "Twickenham Ferry;" duet, "The Orange Girl," Miss Hattie Rice and Mr. Barrows; solo, with cornet obligato (by desire), Mrs. Alice J. Osborne, and for a hearty recall, a repetition of a part of the same song was finely rendered; song, "My Queen," Rev. Mr. Barrows; readings, "Father Paul" and "Money Musk" (by desire), Mrs. Alice J. Osborne, combining the tragic and ludicrous with remarkable effect and interest to the audience, and for a double recall recited "Mark Twain's Experience with the Telephone," which caused much merriment; duet, "Speed my Bark," Miss Googins and Miss Birch—well rendered and well received; solo, "Sweet Oranges," Mrs. Alice J. Osborne; a highly pleasing performance that is seldom heard, and for a hearty recall, sung, with good effect, "Mrs. Lofty and I." For a fourth recall, a fine sentimental piece was sung. Trio, "Memory," Miss Rice, Mrs. Osborne and Mr. Barrows—a grand effort that closed one of the choicest entertainments of the season. Mrs. Addie Britton was the accomplished pianiste for this occasion. At the request of Mr. Sharon, proprietor of the Palace hotel, Mrs. Osborne sang "Ninety and Nine," after which, by special request of Mr. Charles Crocker, she recited "Left at the Depot." The applause given and evident satisfaction evinced by a highly pleased and delighted audience was complimentary to this rare literary and musical entertainment. Before separating, an impromptu reception was given, and social converse had with these distinguished and welcome visitors to our State. Our guests constituted themselves a committee to entertain us. As representatives of the best society, they have honored us with their presence, and this auspicious event will long be remembered. We hope they will come again and stay longer.

Supreme Master Workmen.—The following is a list of the Past Supreme Master Workmen: W. H. Comstock, Pa.; J. J. Upchurch, Pa.; R. D. Handy, Kentucky; J. M. McNair, Pa.; C. Shryock, Ky.; Samuel B. Myers, Pa.; John Frizzell, Tenn. The present total membership of the Order is estimated at 106,000.

Friendship, No. 179, paid a fraternal visit to Fidelity, No. 136, on the 13th inst. There was an exuberance of good feeling, very interesting exercises in the line of music, instrumental and vocal, and speeches from the members of each Lodge.

G. T. Shaw, D. D. G. M., owing to pressing business engagements, has resigned his position as District Deputy. We are sorry to lose the services of so valuable an officer as Bro. Shaw proved himself to be during the last year.

California has now over a thousand more members than the mother jurisdiction, Pennsylvania, but New York still leads us by about 3,000.

Ten thousand dollars paid out in April to the representatives of deceased members of our Order in Illinois.

At Ione, Placer county, on the 4th of July, there will be a celebration under the auspices of the A. O. U. W.

Missouri has instructed its Representatives to the Supreme Lodge to work for "graded assessments."

Annual Picnic Held under the Auspices of the General Relief Committee.

Our yearly picnic was held at Belmont park on Wednesday, May 17th. It was one of the most pleasant days of the season, and all nature lent her charms to this auspicious event. The 8:15 regular train hitched on four cars, loaded, as the advance guard of three special trains following, the last having on board Grand Master Barnes, Orator of the day, and E. M. Reading, President of the day.

The Reception Committee met the Grand Master at the entrance to the park, and F. W. Rossbach, Chairman, in a short address, welcomed him, to which the Grand Master fittingly responded. As a happy gala day it was a complete success. In point of numbers there were not as many as the most sanguine had expected, yet there were over 2,000 on the ground. The exercises of the day were extensive and varied, and seemed to be suited to all ages and stations in life. The little ones patronized the flying horses, the young folks strolled over the hills or joined in the spirited terpsichorean exercises at the pavilion, over which Wm. Decker, P. M. W., presided, assisted by the 2d Regiment Band which furnished the best music. Of this band, we noticed Bros. J. Bree, leader, R. E. Haseltine, cornet, and Mr. I. Coggin, the popular proprietor of Ixora hall. Our middle-aged brothers, with their families, were gathered in family circles all through the park, enjoying their lunch with sharpened appetites. At 12 o'clock literary exercises were held at the pavilion, consisting of a short introductory address by E. M. Reading, P. M. W.; and an able and complimentary address by the Grand Master. After the literary exercises, the real genuine excitement and sport of the day was centered in a list of games, in which there was a large number of participants. Following is the list of games and the winners:

1. Running Race for Boys under Twelve Years—First prize, pocket knife; second prize, box crackers. First, M. Conkling; second, W. Barry.

2. Running Race for Girls under Twelve Years—First prize, work-box; second prize, box of fancy soap. First, Nettie Casement; second, Louisa Schuman.

3. Running Race for Boys from Twelve to Sixteen—First prize, pocket knife; second prize, one statue. First, Claude Fox; second, John Welby.

4. Running Race for Girls from Twelve to Sixteen—First prize, Japanese work-box; second prize, fancy parasol. First, Katie Printz; second, May O'Brien.

5. Running Race for Married Ladies—First prize, castor; second prize, table bell; third prize, box of soap. First, Mrs. Wheeler; second, Mrs. A. McGowan; third, Mrs. Lenz.

6. Running Race for Men, not Members of the Order—First prize, pair driving gauntlets; second prize, can mackerel; third prize, tobacco-box. First, M. Fisher; second, J. Neary; third, J. Higgins.

7. Running Race for Young Ladies Over Sixteen—First prize, elegant fan; second prize, money purse; third prize, box fancy soap. First, Miss J. Wagner; second, Miss Jordan; third, Miss Yaeger.

8. Running Race for Wives of Workmen—First prize, elegant silver cake-dish; second prize, six silver-plated knives; third prize, one dozen cabinet photographs. First, Mrs. R. Dombloat; second, Mrs. Worsdell; third, Mrs. Morris; fourth. Mrs. A. B. Reed.

9. Running Race for Members of the Order—First prize, elegant cigar-stand; second prize, A. O. U. W. diploma; third prize, cheese. First, A. B. Reed; second, W. J. Peters: third, M. J. Cheese.

10. Running Race for Sitting Master Workmen—First prize, one hat; second prize, alarm clock; third prize, box of cigars. First, H. S. Dearborn; second, Fred Blight; third, M. Brown.

11. Running Race for Fat Men—First prize, one ham; second prize, box mackerel. First, McDonald; second, W. H. Matin.

12. Running Race for P. M. Workmen—First prize, elegant P. M. W. badge; second prize, six silver-plated knives. First F. H. Rossbach; second Whipple.

13. Running Race for Relief Committee—First prize, napkin rings; second prize, bazaar; third prize, box codfish. First, J. O. Jephson; second, M. A. Smith; third, A. V. Thompson.

There was no disorderly conduct during the whole day, and the officers and members of the several committees are deserving of credit. We herewith give them: President of the Day, E. M. Reading; orator, Wm. H. Barnes; poet, J. G. Severance. Officers—W. I. McKay, President; Wm. Decker, Vice-President; C. C. Gilmore, Secretary; G. Winehill, Treasurer.

General Relief Committee, A. O. U. W.

Executive Committee—W. I. McKay, President; C. C. Gilmore, Secretary; L. G. Schord, Harry J. Lask, C. Brind, F. W. Rossbach, G. Winehill.

Transportation and Grounds—L. G. Schord, Chairman; Harry J. Lask, G. Winehill.

Printing and Supplies—C. C. Gilmore, Chairman; J. D. Nield, A. F Bell.

Decoration—C. W. Nevin, Chairman; C. Creighton, G. Powell.

Games and Prizes—C. Brind, Chairman; G. W. Crawford, J. F. Brown, F. W. Rossbach, E. M. Reading.

Literary—E. M. Reading, Chairman; J. G. Severance, G. Usinger.

Music—G. Winehill, Chairman; C. W. Nevin, B. J. Triest.

Floor Director—Wm. Decker; aids, Theo. G. Linton, of No. 8; Joe Guisti, of No. 30.

Floor Committee—D. C. Breed, of No. 4; Peter Will, of No. 9; S. W. Purdy, of No. 14; G. W. Lemont, of No. 19; A. Booth, of No. 27; Thomas Noble, of No. 36; Jacob Davis, of No. 41; J. J. Hammond, of No. 42; T. W. Canfield, of No. 44; G. Pohlmann, of No. 68; J. E. Purdy, of No. 73; Ed. Holland, of No. 127; R. F. Symmes, of No. 136; John Sloan, of No. 159; C. S. Hoffman, of No. 174; E. Lichau, of No. 180; Leon Carrau, of No. 185.

Reception Committee—F. W. Rossbach, Chairman; A. D'Elom, San Francisco Lodge, No. 4; T. J. Johnston, Golden Gate Lodge, No. 8; David Cohan, Harmony Lodge, No. 9; E. H. Williams, Jr., Yerba Buena Lodge, No. 14; K. T. Delano, Bernal Lodge, No. 19; S. Rosenfeldt, Unity Lodge, No. 27; H. Hoeber, Valley Lodge, No. 30; A. W. Prevost, Spartan Lodge, No. 36; Richard Day, Magnolia Lodge, No. 41; W. T. Thompson, Myrtle Lodge, No. 42; J. A. Fairweather, Franklin Lodge, No. 44; L. M. Manzer, Hercules Lodge, No. 53; E. P. Farnsworth, Washington Lodge, No. 60; Lee O. Rogers, Burns Lodge, No. 68; S. J. Fletcher, Sts. John Lodge, No. 73; G. W. Dixon, Olympic Lodge, No. 127; G. R. Sanderson, Fidelity Lodge, No. 136; Thos. Curran, Bay View Lodge, No. 159; J. O. Ralston, Memorial Lodge, No. 174; J. G. Jewell, Friendship Lodge, No. 179; H. H. Russell, Triumph Lodge, No. 180; G. M. Lawton, Noe Valley Lodge, No. 185.

North Pacific Coast Railroad.—The Sunday excursions to the great redwoods and Russian river, via San Rafael, by the North Pacific Coast railroad are becoming very popular. Trains leave at eight o'clock A. M., arriving in San Francisco at 7:45 P. M., passing through a rich and fertile region and amid the most varied and romantic scenery on the coast.

Bro. E. F. Calkin, Recorder of Mission, No. 56, we met in the Grand Recorder's office. While there he filed the first death notice from his Lodge, which was organized in 1878. The deceased brother had only been a member 8 months. In point of membership they are gradually increasing. They number 88.

Bro. H. C. Dodge's City Transfer and Delivery Co., No. 3 Post street, is deserving of patronage. His large experience and responsibility, together with a deduction of 25% in charges, is giving him the leading position as a common carrier in this line.

The A. O. U. W. in Kansas is in a flourishing condition. Already it has 3,447 names enrolled, and the G. M. W. is hopeful that the number will be increased to 5,000 before the next session of the Grand Lodge.

The month of May shows a very good record in the payment of assessment No. 8 in our San Francisco Lodges. We believe there will be less suspensions this month than last month.

Since Olympic, No. 127, gave up one of its nights to the ladies and started Aurora, D. of H., Lodge, it has gained 50% in membership.

The new Quaker Dairy, No. 10 Montgomery street, opposite the Lick house, is taking the lead as a resort for the elite of this city.

The 10th Supreme Lodge session will be convened in Cincinnati, June 6th.

Business Announcements.

ACCURACY IN TIME.—The question of accuracy in the matter of time has lately been presented by the American Society of Civil Engineers, in a series of papers embodied in a pamphlet entitled "Standard Time for the United States of America, Canada and Mexico." The plan most favored is that of a series of time meridians, four in number, thus constituting four standards of time on the North American continent. All places less than half way between two of the meridians will take the time of the nearest. It is advised that the first embrace the territory from Nova Scotia on the east to Ohio on the west, and all States lying directly north or south of these. The next would have Indiana and Iowa for its east and west limits. The third would commence with Nebraska and go west to Colorado and Wyoming, while the fourth would include from Utah to the Pacific ocean. These four meridians would form part of a series of 24 extending around the globe, so that this principle could be extended to other countries. The question is also raised whether the day shall not be numbered by hours from midnight to midnight, instead of commencing again at noon. Mr. John Bogart, Secretary of the society, whose office is at 127 East Twenty-third street, New York, will be glad to hear from all who are—from business motives or otherwise—interested in the question of accurate time.

OCEAN METEOROLOGY.—The study of ocean meteorology, which was first successfully undertaken by Lieut. Maury, has been greatly extended in France by M. Brault. His investigations were begun in 1869, upon the basis of exclusively French documents, and they were so successful that, in 1878, he received a prize from the French exposition. His charts of the North Atlantic appeared in 1875 and were presented to the French Academy on the 6th of September. They contain 230,000 observations, both of the direction and of the intensity of the wind. The charts of the South Atlantic appeared in 1876, and those of the Indian and Pacific oceans in 1880. They contain 1,820,000 observations. One of these charts is especially noticeable, that of the summer isanemones or curves of equal wind velocity. They are almost identical with the curve of mean isobars or mean atmospheric pressure. They introduce, for the first time, considerations of the force of the wind at the surface of the ocean, and throw light upon such points as the succession of winds, the ocean currents, the rainfall, the state of the sky and sea, the proportion of tempests and all the principal elements of nautical meteorology.—*Les Mondes.*

SHIPMENTS of tea from Calcutta to America and Australia the present year will be probably 2,000,000 pounds.

CAUTION!!

THE MOST PALPABLE FRAUD!!!

Unscrupulous Persons Envious of the Fame and World-wide Reputation Fairly Won by

THE IMPERIAL EGG FOOD

Are, by fraudulently imitating the style of packages even to forging the very Trade Mark of the Imperial, endeavoring to put upon the market

WORTHLESS STUFF OF NO VALUE WHATEVER TO FOWLS,

Under a name so similar to the Imperial as to be easily mistaken for it at first sight. We take this means of cautioning our numerous customers against the fraud until the law has time to take the perpetrators into its own keeping.

The Imperial Egg Food is now used in every part of the United States, and its sale on this coast is simply wonderful, our order book showing that every customer continues to order, while every letter received is a testimonial for the Imperial. Numerous preparations have from time to time appeared called "Egg Foods," but as they did not conflict in name or trademark, were perfectly allowable, and, after due time, failing in their purpose, passed out of the market, while the Imperial continued to gain favor everywhere. In purchasing, see that you get THE IMPERIAL and none other, no matter how nearly similar in name and appearance. Send for Circulars and Testimonials.

RETAIL PRICES OF IMPERIAL EGG FOOD:

1 Pound Package, 50 Cents. 6 Pound Box, $2.00,
2½ " " $1.00, 25 " Keg, 6.24.

Sold by the trade generally, or address,

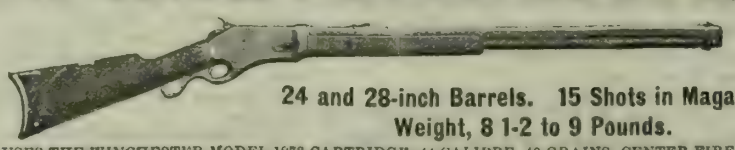
DEWEY & CO.'S

Scientific Press



Patent Agency.

[ESTABLISHED 1860.]

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

SAFETY SHIELD FOR CIRCULAR SAWS.—A new self-acting safety shield for circular saws, designed to guard against the constant danger which threatens the workmen, is made of a plate of iron or steel about as thick as the saw, and curved to its radius, broad enough to give sufficient firmness. It is placed at a given distance from the teeth of the saw, and is furnished with movable plates and adjustment slides, and screws to suit the alterations in the diameter of the saw by wear, or the substitution of smaller for larger saws, or stuff deeper than the cutting part of the saw. The shield is attached to an arm hung upon a stud concentric with the saw mandrel, and is balanced with a counterpoise under the table. The semicircular shield is about one and a half inches deep and the same thickness as the saw. The forward end is so formed that the piece of timber to be cut raises the shield, but the latter rests upon the timber and forms a guard which prevents the workman from bringing his hands or arms into contact with the cutting edge of the saw. As soon as the timber has passed from the saw the shield returns to its original position, entirely covering the saw, and so remains until raised by the next piece of timber.

COL. CHAMBERS SCOTT, who has been collecting information with reference to the proposed terminal port, near Point Lobos, in the Gulf of California, has returned to San Francisco, and will be occupied for the next two or three weeks in preparing his report. The railroad company desire to employ white laborers in the construction of their line, and will give free transportation to all who desire employment to Mohave station. Track-layers, graders, teamsters and laborers are wanted. Applications should be made at the offices of the Central Pacific R. R. Co.

THE FUTURE VALUE OF COPPER.—Soon we will not allow telegraph wires to be strung through our streets and over our buildings, to the detriment of life and property. And, when the time comes that telegraph wires must go under the ground, it will not pay to use any other metal for making them than copper, or steel, copper-coated. Even now, between our populous towns and cities, it is a question whether it would not be cheaper, in the long run, to string our telegraph poles with copper wires, or steel wires, copper-plated, owing to their greater durability and connectivity, just as railroads have found it more economical to use steel rails rather than iron. For conducting electricity for lighting, heating, and power purposes, copper wires must be used, and of considerable weight and thickness. It is said that Edison estimates that he alone will require 2,000,000 lbs. of copper in 1882. His is but one company. There are many other similar companies at work, not only in this city and country, but all over the civilized globe. The same activity prevails wherever there are energetic and civilized nations. As no man could foresee the extraordinary demand for iron that would grow out of the invention of the steam engine, so no man living can form a correct estimate of the demand for copper, for the coming time, that will be created by this more modern invention of the dynamotor.—*Mining Gazette.*

INJURIOUS ELEMENTS OF ILLUMINATING GAS.—M. Pobek, of Breslau, finds that the chief poisonous agent in illuminating gas is carbonic oxide. In some cases, when the gas traverses a stratum of ground which is not yet saturated, it deposits the hydrocarburets which give it its characteristic odor and then diffuses itself in dwellings without its presence being perceived. In such cases the danger of explosion is added to that of poisoning. Explosions are comparatively rare, because the definite proportions which are required for an explosive mixture are not present. When the gas is imperfectly burnt, as in heating apparatus, there is an excess of moisture which is injurious to health.

THE tanning works at Galashiels, Scotland, have been burned. Loss £100,000.

STILL A WEST TO WHICH TO MIGRATE.—This year a regular fever for migrating to new and wild regions appears to have broken out in what was formerly the Western States. There is for many something romantic about thus setting out for unexplored lands. Even the old men and old women feel it, and at setting forth are filled with a new life and fire that makes them young again, while the young kick up their heels like so many baby colts. The rush is now into the far northwest, the Custer region being a grand central point. Gen. Brisbin, in a recent letter, dated Fort Keogh, Custer, Montana, speaking of this rush, says: "The cry is, still they come. I never saw such a rush of people westward. All trains are loaded down. The Ripon colony passed here yesterday—115 families, 506 souls—bound for Clark's Fork bottom. They had an immense train, and bring all their stock, horses, wagons, milch cows, plows, harrows, household furniture, tents and six months' provisions. They had a band of music, an editor, a doctor, etc. They will tent out till fall, and build their houses slowly. It seems to me it must be fun to come West in this way, when one has a jolly crowd and music."—*Virginia Enterprise, 5th.*

THE legislative, executive and judicial appropriation contains an appropriation of $29,720 for the office of Assistant Treasurer, of San Francisco; for San Francisco mint, salaries for officers etc., $43 600; wages $242,000; incidental expenses, $70,000. For the mint at Carson—salaries, etc., $29,550; wages, $54,000, and incidentals, $25,000.

THE electric wires laid under the sidewalk on Market street, in front of Blythe's block, on Monday evening separated from their nonconducting packing and set fire to the wooden boxes in which they were encased. This caused the asphaltum to melt, and the wires had to be disconnected.

THE New York Iron and Metal Exchange was formally opened recently.

NEARLY 7,000 immigrants landed on Monday at New York.

Call and examine my stock.

A Pillow of Thorns.

There was a great scarcity of good servant girls in Elmdale, and Mrs. Warren awoke one morning after a disturbed night's rest, with the thought that a heavy day's work awaited her one pair of hands.

"I hardly know where to begin, John," she confessed to her husband as she hurriedly dressed herself. "I have some canning that must be done, and the ironing is not anywhere near finished, and there's no denying that the baby is very troublesome—can't wonder that he is, though, dear little thing!" she added, as she bent over the cradle where the baby lay sleeping; "he's cutting teeth, and they probably pain him more than we have any idea of."

"You must keep Katy out of school to help you; she is 12 years old, and surely ought to be able to save you a great many steps."

"Oh, I couldn't think of keeping her out of school just now, she'd get behind in her classes. She can help me before school and at noon—yes, and after school, and perhaps I can get through the day all right, although I do feel a severe headache coming on."

After breakfast Mr. Warren hurried to the store, kissing his wife first, however, and saying, "I'm very sorry for you, dear," then looking at Katy, who sat by the window with her history, he added, pleasantly, "Come Katy, child put up your book and help mother—willing little hands can do big work."

But the trouble with Katy just then was that her hands were not willing. As the door closed after her father, she said without rising from her chair, "You don't need me very much—do you, mamma? I haven't learned my history lesson, and we recite it the first thing."

"Why didn't you learn it last evening? You had a long, quiet evening, with nothing else to do."

"Yes, I know I did, but I had an interesting library book to finish, and after that it was too late."

"Another time you must learn your lessons first, before you amuse yourself with story-books. You can study your lesson now; I will get along without you," Mrs. Warren said.

Noon came. There was a nice dinner upon the table. Upon the bars the smoothly ironed clothes hung, and on the kitchen table there was a row of glass jars, filled with delicious hot fruit. But it was a very flushed and wearied face that looked over the coffee-urn. It was only half-past 12 when the family finished their dinner, and Mrs. Warren said, "Katy, dear, you have half an hour before school; supposing you tie on a big apron and help me get some of these dishes out of the way?"

"Oh! dear! I don't see how I can, mamma, I missed my practice hour this morning, and you know I have to take my music lesson to-morrow. But I'll let it go if you say so," Katy said, fretfully.

"Go and practice." That was all Katy's tired mother said, as she gathered up the many dishes preparatory to removing them to the hot kitchen. Katy's conscience troubled her some as she practiced her scales in the pleasant parlor. Two or three times, in place of the musical notes, she saw a tired mother's face, but she did not close her instruction book and go to that mother's relief, only struck the notes more vehemently. It was 4 o'clock when Katy returned from school. Looking into the sitting-room she found the baby asleep in his cradle, and her mother, with bandaged head, lying upon the couch.

"All quiet along the Potomac?" Katy questioned, as she bent to kiss her mother's hot cheek.

"Quiet just now; but the baby's nap is nearly out, and I dread his wakening. My head is much worse. I think you'll have to get tea to-night, dear; I don't think I possibly can."

"All right, mamma; but it is not near time yet, and can I go over to the slope after wild clematis? The girls are waiting at the gate, and we'll not be gone long."

"You can go if you'll be here at five promptly."

"Yes, ma'am, I'll be here," Katy answered as she danced from the room, unmindful of her mother's pain. The door closed after her with a bang which woke the baby, and he began crying. It was some moments before Mrs. Warren's dizzy head would allow her to get up and lift the screaming child from its cradle. She put him on the floor and gave him his box of playthings, which he threw all over the room—even into the dining room beyond. Mrs. Warren did not seem to care where he threw his playthings so long as he was amused. She laid down again and held her throbbing head, watching the clock as the hands crept closer to five, hoping that thoughtless little Katy would keep her promise. The clock struck one—two—three—four—five. Oh, how the little hammer beat her weary head! But, notwithstanding her pain, she arose, built the fire, prepared the supper—a pain in her heart worse than that in her head. "Can it be that my little Katy does not love her mother," she thought.

Supper was all ready when Katy made her appearance at the same time with her father and brothers.

"I am so sorry, mamma. I meant to come sooner, but I was having such a nice time," began Katy apologetically; but her father stopped her.

"Hush! Where have you been?" he said, sternly. "Your mother all alone with the baby? Look at her tired, red face." But his reproof stopped just here, for the tired red face suddenly grew ashy white, and Katy's weary mother was unconscious.

Months have passed since then, but Katy's heart is still sore. Her mother is a patient invalid without the ability to walk a step. Every night as Katy's head falls upon her pillow, she looks about her room's pretty belongings—mother's love and taste breathing through them all—and thinks of what that gray-haired doctor said months ago, as he looked pityingly at her dear mother. Looking at her thoughtless little Katy he had said, "Mother has had to work too hard this hot, close day; she's too delicate for such prostrating work. I suppose you help her all you can?"

"Ah, but that's the trouble! I didn't help mother all I could; that's why my pillow pricks so."

Poor Katy, don't you all pity her?

The Lane Mineral Springs.

The Lane Mineral Springs, owned and managed by Mr. James Hutchins, are located in the northeast corner of Calaveras county, six miles northwesterly from Knight's Ferry, Stanislaus county, the present post office address. The springs can be reached by Lane's Springs stage, starting from Commercial hotel, Stockton, on Tuesday and Saturday mornings. Mr. Hutchins meets passengers with his own conveyance at Knight's Ferry, during the season, on Tuesdays, Thursdays and Saturdays. Guests can arrive any day (except Sundays) from Milton, the terminus of the Stockton and Copperopolis railroad, by hiring a private conveyance, some 13 miles to the springs. Copperopolis, famous in early copper mining days, is situated within seven miles north of the springs. Telegraph City is four miles, the once famous Napoleon copper mine, 2½ miles distant. They were discovered by Major Thos. Lane over 20 years ago, and have been visited as a place of resort ever since. Their altitude is 1,000 ft. The climate being favorable, guests are accommodated during all seasons of the year. They are best known by the people of Calaveras and adjoining counties, with whom they are in high favor by those who have tested their qualities and observed their remarkable and salutary effects. The water is cool and refreshing, and to most tastes quite palatable. From the reputation it bears, the water may be rated as second to none in its beneficial and curative qualities for pulmonary complaints. It is also considered superior in cases of catarrh, rheumatism, asthma, paralysis, and dyspepsia, liver, kidney and nervous diseases.

The climate is markedly dry during comparatively a large portion of the season, without being excessively warm. This arises, perhaps, from the fact that it is situated, as it were, on a point of rolling foothills, bounded on different sides by the vast plains of the San Joaquin valley. Fogs are infrequent visitors, and only in the wet season. The sea air, sweeping across the broad valley, seems to be favorably acted upon by the golden rays of a California sun, until it possesses rare desiccating and health-restoring qualities. Upon reaching the base of the Sierras, it evidently becomes tempered with mountain atmosphere sufficient to make it more agreeable and consequently kindly in effect upon the human system.

Guests can comfortably visit these springs considerably earlier and later in the season than most other resorts in the central and northern portions of the State.

ARRANGEMENTS have been completed by F. and G. companies of the Second Regiment, together with the Oakland Light Cavalry, to go into a six day encampment at Santa Cruz. It has been decided to name the camp after the popular brigade commander, General Dimond, and the time of the encampment will continue from June 30th to July 5th inclusive, or thereabouts.

IN all the vast expanse of Arizona, lying between the Gulf of California, or intervening Sonora line, on the one side, and the Gila river on the other, and beginning again at the Colorado on the north, thence to the Santa Cruz river on the south, an area of say 150 by 200 miles in extent, there is not a single running stream or other permanent surface water to be found.

PIKE GUPTON, Dr. Glenn's foreman, is authority for the statement that there are at least 30,000 acres of wheat on the Glenn ranch that will not be worth cutting. Mr. Gupton also stated that Dr. Glenn would not raise more than quarter of a crop, and if the Doctor got his seed he would be well pleased.

THE miners who went from Virginia City to work in the Santa Maria mines, in Mexico, contradict the report that they are dissatisfied with their new places. None of them receive less than $3 per day, and some as high as $7.

THE average age of the Oregon brethren is 34.9 years. Death rate last year a little under 6 to the 1,000.

AT the funeral of J. J. Campbell there was a very large attendance of the members of Triumph, No. 180.

Announcement Extraordinary.

We lately noticed the following good thing at L. Sage's Congress Springs Hotel, Santa Clara county. It is creditable, no doubt, jointly to "Mark Twain" and "actual facts and occurrences in hotel experience." We give it for the interest of all concerned.

SPECIAL NOTICE.

This hotel has been built and arranged for the special comfort and convenience of summer boarders. On arrival each guest will be asked how he likes the situation; and, if he says the hotel ought to have been placed up upon the knoll or further down toward the village, the location of the house will be immediately changed. Corner front rooms, up only one flight, for every guest. Baths, gas, hot and cold water, laundry, telegraph, restaurant, fire alarm, bar-room, billiard table, daily papers, *coupe*, sewing machine, grand piano, and all other modern conveniences in every room. Meals every minute, if desired, and, consequently, no second table. English, French and German dictionaries furnished every guest, to make up such a bill of fare as he may desire, without regard to the bill-affair afterward at the office. Waiters of any nationality and color desired. Every waiter furnished with a libretto, button-hole bouquet, full-dress suits, ball-tablets, and his hair parted in the middle. Every guest will have the best seat in the dining-hall and the best waiter in the house. Any guest not getting his breakfast red-hot, or experiencing a delay of 16 seconds after giving his order for dinner, will please mention the fact at the office, and the cooks and waiters will be blown from the mouth of a cannon in front of the hotel at once. Children will be welcomed with delight, and are requested to bring hoop-sticks and haw-keys to bang the carved rosewood furniture especially provided for that purpose, and pop-tops to spin on the velvet carpets; they will be allowed to bang on the piano at all hours, yell in the hall, slide down the bannisters, fall down stairs carry away dessert enough for a small family in their pockets at dinner, and make themselves as disagreeable as the fondest mother can desire. Washing allowed in rooms, and ladies giving an order to "Put me on a flat iron" will be put on one at any hour of the day or night. A discreet waiter, who belongs to the Masons, Odd Fellows, Knights of Pythias, and who was never known to even tell the time of day, has been employed to carry milk punches and hot toddies to ladies' rooms in the evening. Every lady will be considered the belle of the house. The office clerk has been carefully selected to please everybody, and can play draw poker, match worsteds at the village store, shake for the drinks at any hour, day or night, play billiards, good waltzer, and can dance the German, make a fourth at euchre, amuse children, is a good judge of horses, as a railway and steamboat reference is far superior to Appleton's or anybody else's guide, will flirt with any young lady, and not mind being cut dead when "pa comes down;" can room 40 people in the best room in the house when the hotel is full, attend to the annunciator, and answer questions in Hebrew, Greek, Choctaw, Irish, or any other polite language at the same moment without turning a hair. Dogs allowed in any room in the house, including the w(b)ine room. The proprietor will always be happy to hear that some other hotel is "the best in the country." Special attention to parties who can give information as to "how these things are done in Yewrup." The livery connected with the establishment is complete in all its details. Our horses all can trot to the wire in 2:15 and less. Pedigrees furnished, carriages and vehicles with coat of arms and heraldic devices of all descriptions and to suit the most fastidious. Footmen and drivers uniformed and can converse on any subject, a classical education being made a condition of service. The proprietor will take it as a personal affront if any guest on leaving should fail to dispute his bill, tell him he is a swindler, the house a barn, the table wretched, the wines vile, and that he, the guest, 'twas never so imposed upon in his life, will never stop there again, and means to warn his friends."

Silk Culture.

The California Silk Culture Association is continuing its work with vigor, and with increased interest on the part of the people. At a meeting held on Thursday of last week a stirring address was made by Rev. C. A. Buckbee, in which he advocated a silk-reeling school in San Francisco, and from facts gleaned from the Philadelphia school, said: The California Silk Culture Association has a work to do for the Pacific coast. The success of its benevolent mission requires the establishment of a silk-reeling school. It must do for this part of the country what the noble women of Philadelphia are doing for the East. Generous men have helped them there, and equally generous men will help you here. The speaker estimated the cost of a school at two thousand dollars, and said: With such a fund as this we feel confident that a silk-reeling school could be successfully established, a sure market opened for the sale of silk cocoons, for the benefit of families now raising them in eight or ten of the counties in the State, instruction given to girls and women, who would spread the knowledge of silk reeling in all our homes, and an enduring interest awakened on behalf of this new and remunerative home industry that would, in a few years, make California as noted for its silk productions as it is now for its other world-renowned productions of wheat, wine, fruits, etc. The Association was urged to arrange for holding a popular public meeting, and to institute such measures as will secure the presence of as many as possible of the best men and women of this city.

It is a fact of much importance that Prof. Wilkinson, Superintendent of the Deaf, Dumb and Blind Asylum, at Berkeley, is ready to establish a filature and buy cocoons as soon as he can be assured a good supply.

The latest item of silk news from the East is the organization of the North American Silk Exchange in New York, for the purpose of stimulating silk culture in the country. They propose to invest in lands, mulberry trees, etc., in different parts of the country.

A DISPATCH from Tilsit states that at a council of the Russian Imperial family at Peterhoff palace it was decided, because of the receipt of alarming information touching the projects of the Nihilists, to defer the coronation of the Czar for a year.

IT is the fashion in Milan to grow fruits instead of flowers for house plants. Some elegant parlors are almost converted into little orchards.

Resolutions of Respect.

[IN MEMORIAM.]

HALL OF BRIDGEPORT LODGE, No. 167, A. O. U. W., NORTH SAN JUAN, CAL., May 19, 1882.

As brothers, we, the committee appointed for the purpose, submit the following as a token of respect to the memory of Evan D. Evans, our deceased brother:

Resolved, That while we know the Supreme Master has called him to the higher life, and that he has gone with record clear and password ready, yet we mourn his loss.

Resolved, That in his death, his family and Bridgeport Lodge have lost a valued friend. He was a loving husband and father, and a trusted brother.

Resolved, That this Lodge tender its heartfelt sympathy to the bereaved family.

Resolved, That our charter be draped in mourning for 30 days, as a mark of respect to the memory of our brother, the first member of our Lodge who has joined the great brotherhood beyond.

Resolved, That these resolutions be spread upon the records of this Lodge; that the Recorder be instructed to forward a copy to the family of the deceased, and also to furnish the PACIFIC STATES WATCHMAN, and North San Juan *Times*, each with a copy for publication.

Fraternally submitted in C. H. and P.,

F. MANHIRE,
H. M. MOORE,
A. J. TIFFANY, } Committee.

[IN MEMORIAM.]

HALL OF YERBA BUENA LODGE, No. 14, A. O. U. W., San Francisco, April 14, 1882.

To the Master Workman, Officers and Members of Yerba Buena Lodge, No. 14, A. O. U. W.—DEAR SIRS AND BROTHERS: We, your Committee, appointed to draft resolutions upon the death of our BRO. HENRY LECROIX, beg leave to submit the following report:

WHEREAS, It has pleased Almighty God in his infinite wisdom, to take from us our late Bro. Henry Lecroix, and

WHEREAS, We desire to give expression to our deep sense of the loss we have sustained, and of our sympathy with his bereaved family, therefore be it

Resolved, By Yerba Buena Lodge, No. 14, A. O. U. W., that while we bow in humble submission to the will of the Most High, we do not the less mourn the loss of our brother, who, by his life, while associated with us as a member of our beloved Order, had endeared himself to us as a true Workman.

Resolved, That the heartfelt sympathy and sincere condolence of this Lodge be extended to the bereaved family of our late Brother, and we commend them for consolation to Him who in His holy habitation is a father of the fatherless and the widow's judge.

Resolved, That the charter of this Lodge be draped in mourning for the term of thirty days.

Resolved. That these resolutions be spread upon the records of this Lodge, a copy thereof sent to the bereaved wife of our deceased Brother, and a copy sent to the PACIFIC STATES WATCHMAN for publication.

C. H M. CURRY,
W. J. THOMSON,
J. W. BLAKE, } Committee.

[IN MEMORIAM.]

HALL OF TRIUMPH LODGE, No. 180, A. O. U. W., SAN FRANCISCO, CAL., May 23, 1882.

To the Master Workman, Officers and Members of Triumph Lodge, No. 180, A. O. U. W.—SIRS AND BROTHERS: Your committee, to whom was referred the matter of drafting resolutions in regard to the death of Bro. J. J. Campbell, most respectfully submit the following:

WHEREAS, For the second time in the history of our Lodge, death has invaded our fraternal home and bereft us of our honored brother, J. J. Campbell; therefore, be it

Resolved, That, by the death of Bro. J. J. Campbell this Lodge looses a most worthy member, his family an affectionate husband and father, and the community an honorable and useful citizen.

Resolved, That this Lodge extend to her who has been the partner of his joys and sorrows, his hopes and fears, their full and heartfelt sympathy, and to his little ones our love, best wishes and sincere hopes for their welfare.

Resolved, That a copy of these resolutions be sent to his family; and, as a token of our respect, the charter of this Lodge be draped in mourning for the period of 30 days.

F. N. NICOLAYSEN,
JAS. WATERMAN,
DAVID FINLEY. } COM.

CALIFORNIA FLOUR EXPORTS.—From the returns furnished by the Bureau of Statistics it is shown that in the exports of breadstuffs for April, San Francisco leads with 2,340,466 bushels of wheat, New York being a very poor second with but 1,397,893 bushels. Baltimore takes third rank, with 565,287 bushels, and Oregon comes fourth, with 212,301 bushels. The exports from this coast form more than one-half of the total foreign shipments of wheat made during the month. While the flour shipments do not take quite such a leading position, the exhibit is a creditable one. New York shipped 232 464 barrels, Boston 75 692, San Francisco 74,941, and Baltimore 42,436 barrels. The shipments from this coast formed one-quarter of the total flour exports for the month under mention.

THE big engine of the Southern Pacific railroad company arrived at Sumner and went out on her trial trip over the Tehachapi mountains, taking with her 14 loaded freight cars. The complement for an ordinary engine is six loaded freight cars.

THE French Chamber of Deputies resolved, despite the opposition of Say, Minister of Finance to consider the proposal of substituting a duty on all goods for the duty on wine and beer. At the close of the sitting, Say tendered his resignation.

THE mining district of eastern Montana comprises an area 80 miles long by 40 wide, located between the Yellowstone, Missouri and Musselshell rivers and the Belt mountains. In this district are the Barker, Montana, Judith, Warm Spring and Maginnis mines.

THERE is a cheerful gathering at Rochester, N. Y., on the 19th of next month, when the "National Funeral Industrial Exposition" opens. The announcement says: "Ample and pleasant accommodations have been arranged for 5,000 visiting funeral directors."

THE Atchison, Topeka & Santa Fe Co. has secured control of the Louisville and St. Louis air line.

The Manufacture of Organs.

Until a recent visit to the factory of Bergstrom & Co., on Mission and 29th streets, we had no idea how much of an industry the building of parlor, church and concert organs had come to be in this city. There we found quite an establishment, fully equipped for work of any kind or size, with skilled workmen engaged in the various branches of the art, and all busy, with plenty of work ahead of them. Mr. John Bergstrom began this business in 1864 on a very small scale, and it has gradually grown to its present respectable dimensions. The place is now fitted to make church organs of the very largest size.

Mr. Bergstrom is now making half a dozen organs of a size to take the place of reed organs, as he can sell them at about the same price—say $600—and they have much more volume and make a much more imposing instrument. They will answer admirably for small churches that have no great space, or can afford no very large instrument. One of this type we saw in course of construction.

It is some 13 ft. high by 7 ft. wide, and 4 ft. 6 inches deep. It has pedal base, with four stops on the manual and 244 pipes. It is quite handsome. There are 25 foot pedal notes. This type of instrument is a very fine one for large halls, Lodge-rooms, etc.

Mr. Bergstrom is now engaged on a two-manual organ for the Episcopal church, at Seattle, which will cost some $2,000. He is also at work on one for exhibition at the Mechanics' Institute in this city, (which opens in August). This is a three-manual organ, which will cost $2,500. The largest one, on which he is now at work, is a three-manual instrument for St. Francis' Catholic church, on Montgomery Avenue, in this city. This organ will cost $5,000, and it will take to next Christmas to complete it.

Many of the larger organs on this coast have been built by Mr. Bergstrom. That in the Metropolitan Temple in this city, the largest on the coast, was built by him. It cost $12,000, and took 18 months to complete it.

Among others made here was that for the Christian Union at San Lorenzo. One for Guatemala, Central America. The one built for Miss Dillaye, teacher of music and organist of Rev. Mr. Smith's tabernacle, on Tyler street, is a first-class instrument of the type before referred to as designed to displace reed organs.

In addition, organs have been made for the Spanish church in this city; for the Methodist church, Portland, Oregon; for the Methodist church, Santa Clara; for a church in Napa City; for the Independent church (the late Dr. Hamilton's), Oakland; the Presentation convent in this city; for a church in Tucson, Arizona, etc.

They make everything here except the reeds, and no better workmanship will be found in any instrument anywhere. The mechanism is all of first-class order, and every little detail is carefully attended to. They have as good facilities for manufacture as they need, and Mr. Bergstrom is fortunate in having a number of first-class workmen. They use all California woods except in those parts where black walnut is needed.

Mr. Bergstrom has the highest recommendations from all those for whom he has worked, and organists on this coast are indebted to his skill for keeping the instruments in repair. His work is preferred to that from the East, and he has established for himself an envable reputation for skill, reliability and good work.

OCEAN METEOROLOGY.—The study of ocean meteorology, which was first successfully undertaken by Lieut. Maury, has been greatly extended in France by M. Brault. His investigations were begun in 1869, upon the basis of exclusively French documents, and they were so successful that, in 1878, he received a prize from the French exposition. His charts of the North Atlantic appeared in 1875 and were presented to the French Academy on the 6th of September. They contain 230,000 observations, both of the direction and of the intensity of the wind. The charts of the South Atlantic appeared in 1876, and those of the Indian and Pacific oceans in 1880. They contain 1,820,000 observations. One of these charts is especially noticeable, that of the summer isanemones or curves of equal wind velocity. They are almost identical with the curve of mean isobars or mean atmospheric pressure. They introduce, for the first time, considerations of the force of the wind at the surface of the ocean, and throw light upon such points as the succession of winds, the ocean currents, the rainfall, the state of the sky and sea, the proportion of tempests and all the principal elements of nautical meteorology.—*Les Mondes.*

IT is expected that the furnace of the Clipper Gap Iron Co. will start up by the 1st of June, by which time enough charcoal will be on hand to insure a long run. To supply the necessary amount of charcoal, 30 000 cords of wood have to be cut, which is being done by a force of 125 woodchoppers, and the wood they cut is on land owned by the company in Placer and Nevada counties. This land lies on both sides of Bear river, chiefly on the Nevada county side, and comprises 8,000 or 10,000 acres. About 15,000 cords of wood have already been cut, and much of it hauled to the kilns.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in DEWEY & Co.'s SCIENTIFIC PRESS PATENT AGENCY, 252 Market St., S. F.

FOR THE WEEK ENDING MAY 2, 1882.

257,273—RIDING SADDLE—Joseph Bassler, San Jose, Cal.
257,213—TACK—A. J. Culbertson, San Andreas, Cal.
257,306—STATION INDICATOR—Michael Farley, Portland, Oregon.
257,166—WATER AND AIR WHEEL—David B. James, S. F.
257 350—POCKET—David Lubin, Sacramento, Cal.
257,351—PIN—David Lubin, Sacramento, Cal.
257,352—ENVELOPE—David Lubin, Sacramento, Cal.
257,173—OIL CUP—John S. McBride, Sacramento, Cal.
257 357—UNDERGROUND CONDUIT FOR ELECTRIC WIRES—A. F. McGrew, S. F.
257,234—CAR COUPLING—Frank Miller, Olema, Cal.
257,380—SELF ACTING BLOW PIPE LAMP, ETC.—Thos. Poyser, S. F.
257,239—UTILIZING SPENT LIME FOR BRICK AND TILES—E. L. Ransome, S. F.
257,241—PLOW—Milton Ross, San Jose, Cal.
257,244—CAR COUPLING—A. Schulenburg, S. F.
257,249—BRAKE BLOCK—Edward G. Spencer, Iowa Hill, Cal.
257 254—TWO WHEELED VEHICLE—Samuel G. Thompson, Santa Rosa, Cal.
257,420—NUT LOCK—Wm. C. Watson, Puyallup, W. T.
257,219—ENDLESS TRACK FOR SEAMING CYLINDERS FOR CANS—Joseph P. Haller, S. F.

FOR THE WEEK ENDING MAY 9, 1882.

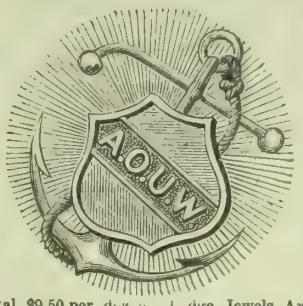
257,811—PHOTOGRAPH COLORING—H. Austin and L. J. Kimball, S. F.
257,560—APPARATUS FOR UTILIZING SOLAR HEAT—Geo. W. Deitzler, S. F.
257,674—CABLE RAILWAY—Terrence Duffy, S. F.
257,486—NEW GOVERNOR FOR ENGINES—Myron G. Foote, Gold Hill, Nevada.
257,702—UNDERSHOE—Frederick W. Hesse, Santa Rosa, Cal.
257,726—WATCHMAKER'S COMBINATION TOOL—Wm. H. Lamb, S. F.
257,521—STENCIL PRINTING MACHINE—Albert G. Shannon, Santa Rosa, Cal.
257,536—DEVICE FOR COOLING TIRES—Isaac L. Umstead, Ione, Cal.
257,739—HAND ROCK DRILL—Eugene Morean, S. F.

FOR THE WEEK ENDING MAY 16, 1882.

257,992—THRASHING MACHINE—Henry N. Dalton, Oakland, Cal.
257,927—CARPET SWEEPER—B. Figer, S. F.
258,049—OIL CUP—John E. Gilligan, Elko, Nevada.
257,940—SEWING MACHINE—George Grisel, S. F.
258,063—BUCKBOARD WAGON—F. A. Hill, Benicia, Cal.
258,064—PLOW—F. A. Hill, Benicia, and M. J. Church, Fresno, Cal.
257,943—ELEVATOR—Philip Hinkle, S. F.
258,100—MACHINE HAND ROCK DRILL—Eugene Moreau, S. F.
258,120—METAL PLANING MACHINE—John Richards, S. F.
258,121—ENGINE LATHE—John Richards, S. F.
258,122—PIPE MOLD—L. Richardson and F. J. Nettleton, San Gabriel, Cal.
258,131—CONCENTRATOR—John F. Sanders, Ogden, U. T.
257,985—ARTIFICIAL FUEL—Wm. C. Siffken, Victoria, B. C.
257,960—FISH WHEEL—Wm. R. McCord, East Portland, Oregon.
257,975—GOVERNOR FOR PUMPING ENGINES—Geo. C. Phillips, Silver City, Nevada.
257,976—DIRECT ACTING ENGINE—George C. Phillips, Silver City, Nevada.

NOTE.—Copies of U. S. and Foreign Patents furnished by DEWEY & Co. in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

ACCURACY IN TIME.—The question of accuracy in the matter of time has lately been presented by the American Society of Civil Engineers, in a series of papers embodied in a pamphlet entitled "Standard Time for the United States of America, Canada and Mexico." The plan most favored is that of a series of time meridians, four in number, thus constituting four standards of time on the North American continent. All places less than half way between two of the meridians will take the time of the nearest. It is advised that the first embrace the territory from Nova Scotia on the east to Ohio on the west, and all States lying directly north or south of these. The next would have Indiana and Iowa for its east and west limits. The third would commence with Nebraska and go west to Colorado and Wyoming, while the fourth would include from Utah to the Pacific ocean. These four meridians would form part of a series of 24 extending around the globe, so that this principle could be extended to other countries. The question is also raised whether the day shall not be numbered by hours from midnight to midnight, instead of commencing again at noon. Mr. John Bogart, Secretary of the society, whose office is at 127 East Twenty-third street, New York, will be glad to hear from all who are—from business motives or otherwise—interested in the question of accurate time.



FRUIT FROM COLTON EASTWARD.—The railroad has given the same rate for eastward shipment of green fruit from Colton as from Los Angeles. The Riverside *Press* says this concession saves $68 on the car to shippers of green fruit from Riverside. At these rates Riverside fruit is shipped East at the same rate paid by the Los Angeles shippers.

THE people of the burnt district in Michigan have not been idle since the fires. Thousands of neat, comfortable houses are being built, and hundreds of acres which were covered with thick underbrush before the fire are now green with wheat and other crops.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

WORKMEN GUARANTEE FUND ASSOCIATION.
Paying $1,000 as Directed in the Policy.
Only for Members of the A. O. U. W.
Average cost to each member about $8 a year. Endorsed by Grand Masters Barnes, also by Past Grand Masters Jordan, Brower and Taylor, who are members of the Association. Send for application. Address or apply

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the WATCHMAN'S progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tel whether the WATCHMAN has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the WATCHMAN family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the WATCHMAN.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P OWEN—Santa Cruz county.
B. W. CROWELL, San Benito and Monterey counties.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
H. W. MILLER.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

Garey's Orange Culture.

* * * Mr. Garey's experience in orange culture in all its branches, his enthusiasm on the subject, and his fine judgment and natural adaptability, make him one of the most thorough teachers that those who are embarked in the industry could have. Besides, Mr. Garey is master of a very clear and pleasant diction, and handles his pen with a facility that gives his writings flow and attractiveness. The volume should have a wide circulation, and do good financially to its author as well as to orange-growers. We need not say that Mr. Rose's contribution in the appendix to the literature of the vineyard, will be read with interest and profit by all who wish light on a subject of the greatest importance to this section of the State.—*Los Angeles Daily Express.*

Pleasure in Recommending, Etc.

OAKDALE, Stanislaus Co., Cal., March 6, 1882

Messrs. Dewey & Co.—DEAR SIRS: I hereby acknowledge receipt of patent with copies, for which please accept my sincere thanks. I shall take pleasure in recommending your agency when I have an opportunity.

Yours Truly, J. M. NELSON.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.

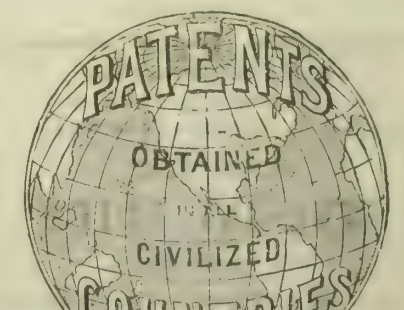
J. H. CROSS, Proprietor.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.



Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

DO NOT DELAY.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

The Assimilation of Fat.

Most physiological text books teach that the fat of the body is not derived directly from the fat of the food. But from statistical analysis Hoffmann has arrived at the conclusion that the formed fat of the animal body arises not only from heterologous elements of the food, but also in part, at least, from ingested fat. Radzcejewsky concludes that the special destination of this fat is the intramuscular adipose tissue. A series of investigations, undertaken by Lebedeff in the clinical department of the Pathological Laboratory at Berlin, leads him also to the conclusion that the ingested fat is deposited unchanged in the fatty tissue of the body. Two dogs were kept fasting for a month, losing in the time about 40% of their weight. Previous experiments have shown that, under these circumstances, all the fat of the body disappears. The dogs were then fed on a diet which consisted of large quantities of fat foreign to their own nature, and a small quantity of flesh. Both dogs regained their normal weight in three weeks, and were then killed. One had been fed on linseed oil, and from its tissue was obtained more than a kilogram of fatty oil, which did not become solid at the freezing point of water, and which corresponded closely in chemical characters to linseed oil. The second dog was fed on mutton suet, which had a boiling point about 50° C., and in its body, in the muscles, about the internal organs, and beneath the skin, a form of fat was found which was almost identical with suet. The organs of each dog were free from disease. Thus it would appear that ingested fat, even such as is foreign to the individual constitution, may yet become transformed directly into the fatty tissue of the animal. Other experiments of the same investigator seem to show that this is true also of milk fat.—*Lancet.*

THE House Naval Affairs Committee is in favor of the bill to abolish the Boston navy yard. The ground covered by the Brooklyn yard is valued at $20,000,000.

FAST OCEAN STEAMING.—An old Scotch shipbuilder said, years ago, that if he were paid money enough he would build a steamer that would cross the Atlantic without breaking the Sabbath. At the time this was thought to be an idle boast. Twelve days between Liverpool and New York was then considered a fair passage, and 10 days was held to be a fast passage. But the confidence of the shipbuilder in the possibilities of the ocean steamer is justified by what is now being done every day on the North Atlantic. Although no steamer has yet made the passage within seven days, yet it is more than possible that that time will be made in the near future. The average time of the passage has been reduced until eight and nine days is only considered good time, and the extraordinary runs of the *Alaska*, of the Guion line, is an indication of a still further reduction. The *Alaska*, on her last trip from New York, made the run between Sandy Hook and Queenstown in 7 days, 6 hours and 53 minutes actual time, and she arrived at New York from Liverpool, on April 16th, having made the run from Roche's Point to the bar in 7 days, 6 hours and 18 minutes, averaging 394.83 knots per day, or 16.45 knots per hour. To give an idea of her actual work per day, we will state that on her first day she made 380 knots; second, 383; third, 392; fourth, 417; fifth, 409; sixth, 397; and seventh, 419.

GRAPHITE AS A PAINT FOR SMOKE-STACKS.—John Dent of Ore Knob, Ashe county, N. C., writes to the *Engineering and Mining Journal* as follows: "I notice your suggestion as to the use of graphite as a paint to protect iron smoke-stacks against the corrosive action of sulphurous acid fumes. Two years ago I painted two iron smoke-stacks with a mixture of oil and graphite, and it is now nearly as good as when it was put on. The stacks stand within 400 ft. of the roasting ore piles, and are exposed to the fumes for nearly half the time."

The English Channel Tunnel.

We condense the following account of the present status of the great engineering feat of constructing a tunnel under the straits of Dover, to connect England with the continent by railway, from a late issue of the London (Eng.) *Building and Engineering Times:*

The total length of the 7-foot gallery, to test the practicability of a channel tunnel, now extends to upwards of a mile. Since this heading was commenced, the progress made has been of the most satisfactory character, and continues to improve. A uniform rate of boring is maintained, and the work is materially assisted from the fact that there is an entire absence of water. The debris from the heading is at present removed in trollies connected with the machinery at the top of the shaft, but in order to expedite the work a compressed air engine is about to be introduced into the cutting. A double set of rails is laid in the heading, so that no time may be lost in the conveyance of the trollies to and from the shaft. The gray chalk through which the 7-foot gallery is being driven is a very solid substance. As it comes away from the face of the heading it is in large flakes. The possession of a piece is regarded as a great novelty, and the miners find a ready market for any they happen to have. The boring is now proceeding under the sea.

It was recently announced in the House of Commons that the government had concluded to stop work on the tunnel until further action had been taken by Parliament in the matter. In regard to this opposition, which is based upon military grounds, the *Law Journal* observes that the Government will do well to consider whether the opposition of this country is necessarily conclusive. Suppose a French company, aided, it might be, by British capital, were to take French leave, and set to work without asking the British government or Parliament? It is clear that a tunnel might be run from the French coast to the line at which British jurisdiction begins before any difficulty of international law would arise. From the limit of British jurisdiction to the shore, excavators would come within the influence of the rule that the sea within the limit is presumed to be in the possession of the country whose coast adjoins. But the Territorial Waters Act, 1878, applies only to jurisdiction on the sea, not to the land under the sea; and the rule as to the jurisdiction of the adjacent country cannot apply to land under the sea acquired by a foreigner from seawards.

The three-miles' rule assumes possession, being calculated according to the carrying powers of a cannon; and if there is any constructive possession of the land under the three miles of sea, it must give way to actual possession by a tunnel. In fact, from the point of view of international law, it would be the last step only which would cost—namely, the rise to the surface of the tunnel under the shore and in British *terra firma*. If, however, the French company could buy their footing, there is no reason why they should not hold it, as, by the Naturalization Act, 1870, the disability of aliens to hold land is abolished. No doubt an act of Parliament might be passed annulling the purchase; but such a step is more possible than practicable. It thus seems that, if England does not meet France half way, we may have France coming across to us under the sea and actually touching British soil at Dover.

VARIATIONS IN THE VELOCITY OF SOUND.—Prof. Mach, of the University of Prague, has experimented with sounds which are produced by electric sparks. The waves which are excited by two simultaneous sparks interfere, and the interferences are observed by the traces which they leave upon glass covered with lampblack. The velocity of wave propagation is greater than that of ordinary sound waves, but it diminishes in proportion as the waves separate from the point of excitement, and tends towards the ordinary values.

IMPROVED MORTAR.—Sawdust is better than hair in protecting rough cast from peeling and scaling under the influence of frost and weather. The sawdust should be first dried and then thoroughly sifted, in order to remove the coarser particles. A mixture is then made of two parts sawdust, five parts sharp sand and one part cement, which should be thoroughly stirred together and then incorporated with two parts lime.

Preliminary Diagnosis.

It seems to us that the first thing which should be ascertained concerning an applicant for membership in any beneficiary association would be comprehended in the answer to such a question as the following: Is he in any respect a man of excessive passions? If he is such a person, he is afflicted with a disease fully as fatal as any found in the medical vocabulary, and with one, too, which may prove far more disastrous to the association in its consequences. Passion, in its mildest form, is feeling which arises involuntarily, as anger, love, hate, appetite. When uncontrolled it becomes violent, and does much injury, not only to the health and moral standing of the person that allows it to run on unbridled, but often to innocent beings and things.

Says Dr. Abernethy: "I tell you honestly what I think is the cause of the complicated maladies of the human race. It is the gormandizing, and stuffing, and stimulating their digestive organs to excess, thereby producing nervous disorders and irritations. The state of their minds is another grand cause; the fidgeting and discontenting of yourselves about what cannot be helped; passions of all kinds. Malignant passions pressing upon the mind disturb the cerebral action, and do much harm."

The passions may be resolved into two great divisions: The "malignant," as rage, anger, hatred, jealousy, etc.; and the "passions of appetite, both mental and physical," as love, fondness, desire, intemperance. From division to division, and from passion to passion is but a step—beware of the first. If you would keep the assessments down, and insure the success of the Order, beware of the passionate man. He would not, or, more properly, could not, hesitate in a fit of melancholy to take his own life; in a moment of rage he would not hesitate to destroy his fellow man. But if, perchance, he does neither of these rash acts, all the same the man is slowly suiciding, and dragging others with him to an untimely tomb; and the Order pays his bills. Now, the A. O. U. W. is an organization pretending to inculcate morals of the highest order. That it has endeavored to do so, and, in fact, succeeded almost beyond a precedent, no one will dispute; but it has certainly become glaringly apparent to every honest Workman, by this time, that weare holding out inducements to suicides never before offered in this line. It would be wrong, of course, not to pay a benefit to the doubly stricken relative or friend. The remedy is not in this. It rests in the medical examination, or a complete diagnosis.

FINGER ROCK. ECHO CANYON, UTAH.

THE SECRET BALLOT.—Says Dr. W. Anderson, in writing to the K. of H. *Standard*, of New York city: "It takes a majority, or a two-third vote to transact the business of the Lodge, or to spend a dollar, and why not apply it to the introduction of new members? It is a monstrous inconsistency to let two men prevent any number of candidates being accepted, and that without any reason being given. It would be for the greatest good to the greatest number if this right to stab in the dark should be modified or abandoned." But let us, at the same time, remember that two men may have good and entirely sufficient reasons for preventing the admission of candidates, though they might not care to make a public parade of them. Cases of such a nature have arisen thousands of times, and a thousand times, perhaps, has the Lodge been saved. But there is no doubt that the secret ballot is often misused.

BROS. J. P. Mills and W. H. Rich, of Protection, No. 93 at Stewart, Iowa, called on us on the 30th ult. They are on a journey to Washington Territory to see the country and more than probably will make that their future home, as they have their families with them. Our brethren expressed themselves as much chagrined from the fact that they could not visit any one of our Lodges. Each one of them subscribed for the WATCHMAN, and they expressed themselves with much emphasis that the next number would contain the news that Iowa would be one of the great family of Workmen. As Workmen they are quite enthusiastic and thought that the interest had somewhat flagged since the secession.

BRO. SAMUEL BLACK, M. W. of Tombstone Lodge, No. 3, Arizona, paid us a visit on Wednesday, 7th inst. Although, at the recent disastrous fire, they lost their rituals and their hall, they are not discouraged. There have been steps taken to organize a Grand Lodge, including Colorado, New Mexico and Arizona.

WE repeat what we have said heretofore: We desire that our brother Workmen, through an appointed agent or some volunteer, will write the facts connected with the organization, history and progress of their Lodge in every part of the jurisdiction of California, Oregon, Montana, Nevada and Arizona. The growth and interest taken in the Order will make facts connected therewith, as a matter of history for future reference, of great interest to all Workmen. If the facts are given us, we will take the trouble to revise and publish them.

OUR OBJECTS.—We make friends of one another. We make self-sacrifices to our fellow members. We protect the widows and orphans of deceased members. We are taking a leading part in all respectable society. We give picnics, banquets, barbecues. We furnish cheap insurance. We comfort the sick and disabled. We are opposed to no other fraternal society in good faith, and cherish prejudice towards no man.

FINGER ROCK.—Echo canyon, in Utah, contains many remarkable features in the way of rock formations, caused by erosion or the wearing away of the soft soil, leaving hard rocks prominent. These assume fantastic shapes, which have been named according to the resemblance which they are supposed to bear to the object from which they are named. Hence, Finger Rock, as in our illustration, Pulpit Rock, Devil's Slide and numerous others.

THE latest game out, says an exchange, is called the "Printer's Delight." It is played thus: Take a sheet of white paper, write your name and address thereon, fold it around a two dollar bill to pay a year in advance for your WATCHMAN, and forward it to the editor. Try it.

THE Workmen of San Jose netted $815 from the proceeds of the recent excursion and picnic to Monterey. It will be used for the purpose of fitting up a new hall.

Good of the Order.

"Good of the Order," says the Master, and leans forward in his chair, looking about the Lodge for responsive indications.

Each member settles himself contentedly and also looks around to see who is to entertain him. No one comes forward, the Master looks disappointed and passes on to the routine business.

All of us have seen just this, time and again, but it is not by any means conducive to the advance of the social features among the brethren. The officers of the Lodge have enough on their hands without being expected to do everything of this kind.

Some Lodges appoint committees having the special duty in charge of looking out for this portion of the evening's work. It does not follow that there should be some entertainment under this head, but there should at least be something prepared which would interest its members.

The proportion of members of each Lodge attending the meetings is comparatively small, and this is more marked in those Lodges which go through [illegible] way than in those where an effort is made to render the proceedings interesting. Routine work has few charms for any one, but the wise provision of arranging for a space of time during the evening where members could relax from business, has been a good thing. The only trouble is that we are apt too much to rely on others without ourselves exerting our talents.

If the Lodges are to be well attended, their attention must be paid to having their part of the evening's business well looked to.

MASS MEETING. — Representatives from all the San Francisco Lodges and a majority of the Oakland Lodges met in Banquet hall, Shiels' building, on Monday evening, June 6th. E. F. Loud, Deputy Grand Master, was chosen Chairman, and E. M. Reading, Secretary. The President stated succinctly the objects of the meeting which were to take into consideration the propriety of inviting the Supreme Lodge to meet in San Francisco in 1883. A large number expressed their views, giving their reasons pro and con. After an extended discussion and exchange of thoughts on this subject, owing to want of time to get an expression from the different Lodges, it was voted unanimously to leave the subject to the Supreme Representatives, as instructed by the Grand Lodge.

WE met Bro. U. Hartnell, Foreman of Sausal, No. 47, who was in attendance as a delegate to the Grand Lodge A. L. of H., which met in this city on the 30th ult. He reported Sausal Lodge in a very flourishing condition, their membership exceeding in numbers any fraternal society in Salinas.

FULL returns and a final balance have not been made by the Relief Committee as to receipts and expenditures connected with the excursion to Belmont. It is believed that the net profit will be about $400.

Home Miscellany.

A Real Sweet Story.

It was by far the worst quarrel they had ever had, and they had had many, for she had a temper, and they were both of them impulsive young people, with very little self control.

"You are a false, selfish, untruthful, manlike man," said she.

"And you a suspicious, unreasonable, unwomanly woman," said he.

"Take back your letters," she cried, flinging a parcel tied with hyacinth blue ribbon on the floor at his feet.

"I will," he muttered, between his clenched teeth, picking up the parcel and throwing it into the fire, where it blazed brightly for a moment or two, and then flew away in thin uncanny black fragments up the chimney. As the last fragment disappeared, Rick turned again to Letty, with frowning brow, and asked, as he had asked before, "Do you still persist in accusing me of deceit and falsehood?"

"I do," she replied, "unless you show me the charm."

"I will not show it to you," he declared, with violent emphasis. "If my word be not sufficient, I refuse to give you further proof. I wonder that you dare insult me by asking it. And I also wonder how you, believing me to be false and untruthful, can be willing to trust your future to me. And, to speak frankly, I begin to think we have made a great mistake in supposing that we could spend that future happily together, for I am fully convinced we are anything but

> Two souls with but a single thought.
> Two hearts that beat as one.

[These lines were quoted with most sarcastic inflection.] And, furthermore, I also begin to think that perhaps it would have been better if we had never made this mistake—If we had never met, in fact."

"Oh, indeed, sir!"—with great assumption of dignity. "Have you just arrived at that conclusion? I have been sure of it. But there is nothing easier than to part. Your letters are already disposed of. To-morrow I will send back your ring and picture. And then, when I am free once more, I can try and please my mother (our acquaintance, as you are well aware, has never pleased her), and in pleasing her I may find I am doing a pleasant as well as a wise thing for myself."

"Are you referring to Broughman Brown?"

"I am referring to Broughman Brown."

"By heavens!" exclaimed Rick, seizing his hat, "this is too much. Letty, good-bye forever!"

But Letty began humming an air from "Patience," drumming an accompaniment on the window pane, and vouchsafed no answer. Rick rushed from the room. The humming and drumming ceased instantly, and the whilom performer listened intently. Five minutes passed and still the street door did not slam. "He is waiting for me to come out into the hall and beg his pardon, I suppose," she said, with a defiant grimace, "but I won't," and she turned again to the window as the door shut with a bang.

And then she flung herself on the lounge, kicked of her slippers, and cried like a sunshower. Rick gone, and gone forever!—Rick, whom she had loved so dearly, and who had loved her so dearly, for two long years. And why? Just because that silly, giggling Lena Varian, with her pale blue eyes and straw-colored hair, had chosen to tell fibs about him. And, shaking the tears from her lashes, she began scolding herself as hard as she had scolded poor Rick. "The idea, Letty Lounsberry, of your believing that girl before him! What possessed you? He did flirt a little with her, that is true; but all men flirt a little with girls who persist in admiring them and flattering them. But he never gave her the little gold pig—your Christmas gift to him—never! How she got it I can't imagine; but he would have explained if you had given him a chance." And the absent mother, gone to Aunt Emory's for a two days' visit, came in for a share of reproach. "If she had only let our engagement be known instead of insisting upon our waiting until Rick was 21, and I had not been obliged to carry my engagement ring in my back hair, the only place where it is safe from baby's—goodness gracious! baby!" And Letty suddenly remembered that ever since Rick came in to make a morning call, knowing Mrs. Lounsberry was absent—poor fellow! he'd have stayed away if he could have foreseen his reception—baby had been sitting alone in the dining-room in the middle of the big dining table, surrounded by all the pickle and marmalade jars and fruit cans and catsup bottles and jam pots out of the store-room. For it was the monthly house-cleaning day, and the store-room fell to Letty's share, the foreign help being gifted with too great a talent for smashing and breaking, to say nothing of an equally great talent for abstracting and devouring both sweets and sours. Letty sprung from the lounge, thrust her feet into her slippers, and hastened where duty had been calling her for some time. Baby sat, as good as gold, nursing a bottle of tomato sauce, snugly wrapped in a dish towel, in the very spot where she had been when Rick's ring summoned her to the door. Only one small flask lay broken on the floor, filling the air with the subtle fragrance of garlic. "That won't be missed," said Letty. "Thank fortune, there is no worse mischief done." But the "thank" was scarcely uttered, when her eyes fell upon the last jar of the famous peach marmalade, the secret of the making of which died with grandmamma, and which was being carefully kept for Aunt Emory's (Aunt Emory was an old maid worth $30,000) birthday. There it stood directly in front of baby, with more than half of its thick paper torn off, and a yawning cavity made in its precious contents by little scooping fingers.

"Oh, baby, why couldn't you have taken any jar but that?" asked Letty, reproachfully and dramatically.

But baby evidently had no excuse to offer for not doing so, for she kept on crooning to her bottle doll, while her sister hastily fashioned another paper hat and tied it securely over what remained of the original covering.

Then said baby, "Rick kiss I—nice Rick!"

Oh, that is what he was doing when she foolishly imagined he was waiting for her to come and implore her forgiveness—bidding good-bye to baby. She might have known it, for he had always loved baby dearly.

"Yes baby; nice Rick, dear Rick, good Rick; but, for all that, the ring he gave me goes back to him to-morrow unless I hear from him to-night. How dare he wish that we had never met?"

But she did not hear from him that night, and the next day the little band of gold was released from its hiding place in her thick brown hair, and a too faithful messenger placed it in Rick's hands as he left his place of business. But, ah! what a silent, sorrowful maiden wandered about the Lounsberry dwelling thereafter! What a listless, weary voice repeated the nursery rhymes that baby demanded fifty times a day!

"No nice—no more," said baby, missing the merry tones and happy laugh.

But Mrs. Lounsberry was not at all displeased with the turn affairs had taken. Broughman Brown suited her much better as a prospective son-in-law than Richard Creighton. One was a wealthy young brewer, the other a poor clerk in a counting-house.

"Letty will soon get over it," she said to Letty's father, whose heart ached at the sight of his daughter's sad face. "A first love disappointment is always hard to bear for a while. I thought I'd have died when Steph. Ford married my cousin; but I didn't. I lived to marry you, and I have a seal-skin cloak, and Mrs. Ford hasn't even a jacket."

And so Broughman Brown, who was really a manly, generous, good-hearted fellow in spite of his beer and wealth, encouraged by the maternal head of the house, began devoting himself in the most ardent fashion to Letty; and she, seeing her mother's pleasure thereat, and hearing no word from Rick, received his attention in a passive, unresponsive way.

Three months went by, and it was Aunt Emory's birthday, and that eccentric old lady had decided to divide it among the family, lunching with one portion, dining with another, and supping with a third. The lunch party was given at her sister Lettia's (Mrs. Lounsberry), and some half a dozen old friends and some dozen relatives were bidden to the feast. Letty, in a sea-green gown (Rick's favorite gown), with a spray of pink hyacinths (Rick's favorite spring flower) in her hair, went quietly about welcoming the guests, Broughman Brown following her like her shadow, until lunch was announced. Then taking her place at the table, the young man still near her, she raised the cover from and dipped a spoon into the last jar of grandma's famous peach marmalade (she had had it placed before her, trusting to be able to hide the mischief baby had done), when somebody said, addressing her mother: "Have you heard that Richard Creighton is going abroad for his health? He has given up his situation, and sails in a day or two. They say he has failed fast lately."

And the very next moment Aunt Emory fixed her spectacled eyes upon her neice's poor pale face, and asked sharply: "What's the matter, child? Do you see anything dreadful in the sweets?"

"No, ma'am," answered Letty, with a pitiful attempt at a smile, when the spoon struck something harder than preserved peaches should be.

"Let me help you," said Broughman; and with one turn of his wrist he placed upon the dainty China shell before her—a wad of paper.

"And so that is the last of the celebrated marmalade, is it?" said Aunt Emory. "I don't want any. I prefer my sweets unmixed with unknown foreign substances. Take it away, Norah."

But Letty was already slowly unrolling the paper (it proved to be the missing part of the jar's original hat)—a rather difficult thing to accomplish, as it stuck persistently to her small fingers; but accomplished at last, when out rolled the little gold pig. And on the inside of the paper was scrawled, in Rick's bold hand, these words:

"My Darling.—How foolish we are I mean, I am! Here is the charm. Miss Varian had it about ten minutes last night—only long enough to show it to you and tell you a story about it. Baby will give it to you. Had no paper; so I tore a piece off one of your jam pots. Will see you to-morrow evening. Rix."

Never did any young lady so suddenly break through all the conventionalities of society; never did daughter so quickly forget the wishes of her mother; never did niece so unflinchingly brave the displeasure of a $30,000 aunt, as did Letty Lounsberry the instant after she had read this note.

"Broughman," she cried, looking at him with beautiful, beseeching eyes, "I must see Rick. *I must—I must.* You will go and bring him to me, dear?"

It was the first time she had ever called him "dear," and, alas! he felt that it would be the last. For a moment he pulled his long mustache nervously. "We are not very good friends, you know," at last he said.

"Yes I know. But I am to blame for that too," said Letty, hurriedly. "Forgive me, Broughman, but I must see Rick."

And the good fellow, hesitating no longer, turned from that imploring face, and with grief tugging at his heart-strings, went off to see his rival. He found him, and brought him back to the girl they both loved.

And what do you think Aunt Emory did—Aunt Emory who had over and over again said, only as Mrs. Broughman Brown, Letty should inherit any of her money. "Left the house in a passion?" not a bit of it. She laughed and laughed until she could laugh no longer.

"Now I shall have something new to tell folks," she said. "They must be tired and sick of my old yarns. I'm sure I am. Love, gold pigs, jealousy, and marmalade all mixed up together. It's one of the funniest things I ever heard in all my life."

"I'm glad you think so," said Mrs. Lounsberry. It don't strike me that way. What are they going to live on?"

"Oh, I'll look after them," said aunt Emory; and her remark made a very good ending to this real sweet story.

Women's Strength.—The strength of women lies in their heart. It shows itself in their strong love and instinctive preception of right and wrong. Intellectual courage is rarely one of their virtues. As a rule, they are inclined to be restless and excitable, allowing their judgments and actions to be swayed by quick emotions of all kinds, but, above all, it is in their hopefulness and endurance that they find their chief power. Who is the last person to give up hope in the case of a member of the family who has apparently gone to the bad? What mother or sister with deep and ardent love for such will ever cease to cherish hope or endure suffering on their account? The patience of women is proverbial, and their whole lives are bound up in their affection. Few people will deny that love in one form or another makes up the beauty of life to women. It enters into all she does. Any work outside her immediate circle is undertaken most often from pure desire to help some one else to know something of the mysterious happiness of love. Unlike men, women chiefly look for personal intercourse with those for whom they are working. If their interest lies among the poor, they are desirous of sympathetic personal acquaintance with them; and very little good work of a lasting kind has been done by women without their own influence of love being brought to bear on the individual case.

Heating by Sunshine.—Professor E. S. Morse, of the Essex Institute, has devised an ingenious arrangement for utilizing the heat in the sun's rays in warming our houses. His invention consists of a surface of blackened slate under glass fixed to the sunny side or sides of a house, with vents in the walls, so arranged that the cold air of a room is let out at the bottom of the slate, and forced in again at the top by the ascending heated column between the slate and the glass. The out-door air can be admitted, also, if desirable. The thing is so simple and apparently self-evident that one only wonders that it has not always been in use. Its entire practicalness is demonstrated in the heating of the professor's study in his cottage at Salem. The value of the improvement for daily warming buildings like churches and schoolhouses, which, when allowed to get cold between using, consume immense quantities of heat before they are fairly warmed again, is evident. Of course some other means of heating must be available when the sun does not shine. But in the colder regions, say in the far Northwest, the sun shines a greater part of the time, and hence the saving of artificial heat would be very large if the sun heat could be "turned on" for eight or ten hours out of the twenty-four.—*Scientific American.*

Tracings on Glass for the Lantern.—The following method, by George Smith, appears to be satisfactory. A piece of finely ground glass is rubbed over with a trace of glycerine, in order to make it as transparent as possible. It is now easy to write or draw on the prepared surface with a hard and finely pointed black lead-pencil, and the glass is so transparent that the finest details of any engraving, over which it can be placed, can be seen quite distinctly. The drawing having been finished, the plate is washed with water, in order to remove the glycerine, and dried. A thin coat of Canada balsam or of negative varnish now serves to render the slide permanently transparent and ready for the lantern.

Pepsine in Sea-sickness.—A note in the *Pharm Zeitung* states that pepsine has been taken in about 20 cases by travelers who had never made a previous voyage, and has proved quite successful in warding off sea-sickness. As much pepsine as will lie on the point of a knife is dissolved in a wine-glassful of water containing five drops of hydrochloric acid. This dose is taken three times a day, and especially if feelings of sea-sickness threaten. Finzelberg's pepsine is especially named as having been used.

Man and Insects.

The only nerves (worth mentioning) in the human body which are not under the control of the brain, are those of the heart and other internal organs; and over these parts, as everybody knows, we have not any voluntary power. But all our limbs and muscles are moved in accordance with impulses sent down from the brain, so that, for example, when I have made up my mind to send a telegram to a friend, my legs take me duly to the telegraph office, my hand writes the proper message, and my tongue undertakes the necessary arrangements with the clerk. But in the insect's body there is no such regular subordination of all the parts composing the nervous system to a single central organ or head office. The largest knot of nerve matter, it is true, is generally to be found in the neighborhood of the sense organs, and it receives direct nerve bundles from the eyes, antennæ, mouth, and other chief adjacent parts; but the wings and legs are moved by separate knots of nerve cells, connected by a sort of spinal cord with the head, but capable of acting quite independently on their own account.

Thus, if we cut off a wasp's head and stick it on a needle in front of some sugar and water, the mouth will greedily begin to eat the sweet syrup, apparently unconscious of the fact that it has lost its stomach, and that the food is quietly dropping out of the gullet at the other end as fast as it is swallowed. So, too, if we decapitate that queer Mediterranean insect, the praying mantis, the headless body will still stand catching flies with its outstretched arms, and fumbling about for its mouth when it has caught one, evidently much surprised to find that its head is unaccountably missing. In fact, whatever may be the case with man, the insect, at least, is really a conscious automaton. It sees or smells food, and it is at once impelled by its nervous constitution to eat it. It receives a sense impression from the bright hue of a flower, and it is irresistibly attracted toward it, as the moth is to the candle. It has no power of deliberation, no ability even to move its own limbs in unaccustomed manners. Its whole life is governed for it by its fixed nervous constitution, and by the stimulations it receives from outside. And so, though the world probably appears much the same to the beetle as to us, the nature of its life is different. It acts like a piece of clock-work mechanism, wound up to perform a certain number of fixed movements, and incapable of ever going beyond the narrow circle for which is is designed. *-Grant Allen, in Knowledge.*

Sound, Light and Heat.—Prof. Tyndall lately delivered the second lecture of his course at the Royal Institution. The explanations given by Huyghens of the phenomena of reflection and refraction, as well as of the properties of convergent and divergent lenses, had, he said, been fully verified by the progress of time and science. The lecturer showed that there are sound lenses also, and that the wave theory affords a no less adequate explanation of their properties. He demonstrated, by the test of the sensitive flame, that cotton net, because porous, transmits waves of sound, while the interposition of a non-porous body leaves the flame unaffected. Just as the passage of light was hindered by clouds, although the air and light of which these are made up were alike transparent, so acoustic clouds obstructed sound. Acoustic clouds consisted of layers of heated air with intermediate layers less heated. The lecturer formed an artificial cloud of the kind, which was known to intercept sound; the sound was thus thrown back in miniature echoes. Another analogy between light and sound was brought out by comparing the solar spectrum with a scale of notes produced by striking a graduated series of tuning forks. To illustrate Dr. Wollaston's observation, that certain sounds are inaudible to many ears, Prof. Tyndall blew a small whistle, whose low, though shrill, note instantly agitated the sensitive flame, while full half of those present, as a scientist had predicted in conversation with the lecturer beforehand, heard nothing. Resemblances were also pointed out between the absorption of light and that of sound. On the sound struck from one tuning-fork being quenched, it was proved to have been not annihilated, but simply absorbed by an adjacent fork. In like manner the yellow ray in the solar spectrum was absorbed by sodium vapor as the metal passed under the eyes of the audience in that form, leaving the place of that color in the spectrum marked by a black band.

Hot Milk as a Restorative. Milk that is heated to much above 100° Fahr. loses for the time a degree of its sweetness and its density; but no one fatigued by over exertion of body and mind who has ever experienced the reviving influence of a tumbler of this beverage, heated as hot as it can be sipped, will willingly forego a resort to it because of its having been rendered somewhat less acceptable to the palate. The promptness with which its cordial influence is felt is indeed surprising. Some portions of it seem to be digested and appropriated almost immediately; and many who fancy they need alcoholic stimulants when exhausted by labor of brain or body, will find in this simple draft an equivalent that shall be abundantly satisfying and more enduring in its effects.

For our Boys and Girls.

Our Puzzle Box.

Numerical Enigma.

I am composed of seventeen letters.
My 17, 9, 3 is a play upon words;
My 1, 2, 5 is a domestic quadruped;
My 10, 13, 4 is a foundling;
My 14, 6, 5, 15 is a long-drawn breath;
My 7, 16, 8 is to contend.
My 12, 9, 11 is a rude dwelling;
My whole was the dying utterance of a great warrior.

JERRY.

Letter Changes.

1. Change the initial of a curse as many times and obtain successively: A short stick, an inhabitant of a certain European country, a female name, hair about the neck of certain quadrupeds, an instrument to indicate the direction of the wind, and to decrease.
2. Change the central of a bower and obtain in succession: Zeal, and a protecting dress.
3. Change the final of a poet and successively form: A sailing vessel, a building for animals, rods, and an abbreviation of an English title of nobility.

KATHARINE.

Decapitations.

1. Decapitate a weight and leave a preposition.
2. Decapitate a place for sitting and leave to consume.
3. Decapitate the noise of a donkey and leave a beam of light or heat.

LEAR.

Names of Towns.

1. My first is used to cross my second.
2. My second should arise before my first.
3. My first is often found in my second.
4. My first is a body of water much larger than my second.
5. Small, a weight.

SOLOMON.

Reversals.

1. Reverse a hollow stalk and make an animal.
2. Reverse novel and make a tumor.
3. Reverse a conjunction and make a wooden vessel.
4. Reverse a weight and make an adverb.
5. Reverse flat and make the same.
6. Reverse a falsifier and make a bar.

Bushy Tail.

Papa's train was in, and Florence saw him coming up the walk with a very big bundle in his hand. It seems almost too bad to have kept the little girl waiting, but mamma said the bundle must not be opened till after supper. Do you know why that was? It was because Florence did not like to eat supper very well, and probably would not have eaten anything at all if she had seen the present papa brought.

By-and-by, the brown paper was taken off, and there was a wire cage with a gray squirrel in it! What do you suppose Florence said to that? I don't think I can tell you just by writing it, but it sounded a good deal like, "Oh! Oh! Oh! O! O! O! My! my! myeeeeeee-e-e-e-e!"

In one side of the cage there was a little door, and before papa knew anything about it, Florence had it open, and in another minute the squirrel had jumped out and scampered way to the top of the bookcase. Such a time as they had catching him. He could run so fast, you know, that they could not get anywhere near him. At last papa got a nut and put it down by the open door of the cage; and then they all went and hid themselves—mamma behind the curtain, papa behind the door, and Florence under the desk. Pretty soon the squirrel peeped over the edge of the bookcase, and, as he couldn't see any one, he came down very carefully to get the nut.

But he did not go into the cage; he was to smart for that. He put his paw inside and pulled the nut out, and then sat up on his hind-legs, put his tail over his head, and began to eat. Suddenly, papa jumped, and said "Shoo!" and the squirrel was so frightened that he ran straight into his cage, and the door was shut in a jiffy.

Well, that squirrel got to be pretty tame. Florence put a little leather collar around his neck, and had a small iron chain so he couldn't get away.

One day she was playing in the yard, when down came an arrow right in front of her. A little boy, who lived just across the street, had shot it into the air, but didn't mean to come so near Florence.

She was dreadfully frightened, though, and dropped the chain, and away ran the squirrel up a tree. Papa tried hard to get him again, but couldn't do it.

Florence cried ever so hard (but, of course, that didn't do any good), and never forgot Bushy Tail.

One day, about half a year after the squirrel ran away, a man came along with a gun over his shoulder and a big leather bag hanging at his side.

"What have you got there?" asked Florence, leaning over the gate.

"Rabbits and squirrels," said the man.

"What you going to do with 'em?"

"Make a stew for my sick little boy."

"May I look?" asked Florence, opening the gate and coming out to the road where the man was.

The man said, of course she could, and he took them out one by one, but they where all dead.

"What has that squirrel got round his neck?" said Florence, as the man pulled the very last one out of the bag.

The man looked very carefully, and then he said:

"Why, it looks like a collar."

"Then it's my old Bushy Tail," cried the little girl.

And, sure enough, it was!

"Did you say your little boy was sick, and wanted a squirrel stew?" asked Florence.

"Yes, miss," replied the man, "and he's pretty sick, too."

"All right, then; you just give him this, with lots of love," said the little girl, patting the dead squirrel on the head, "and I hope it will make him all well again."

And it did.

Household Hints

To Take out Milk and Coffee Stains.

These stains are very difficult to remove, especially from light-colored and finely finished goods. From woolen and mixed fabrics they are taken out by moistening them with a mixture of one part glycerine, nine parts water, and one-half part aqua ammonia. This mixture is applied to the goods by means of a brush, and allowed to remain for 12 hours (occasionally renewing the moistening). After this time, the stained pieces are pressed between cloth, and then rubbed with a clean rag. Drying, and if possible, a little steaming, is generally sufficient to thoroughly remove the stains. Stains on silk garments which are dyed with delicate colors, or finely finished, are more difficult to remove. In this case five parts glycerine are mixed with five parts water, and one-quarter part of ammonia added. Before using this mixture it should be tried on some part of the garments where it cannot be noticed, in order to see if the mixture will change color. If such is the case no ammonia should be added. If, on the contrary, no change takes place, or if, after drying, the original color is restored, the above mixture is applied with a soft brush, allowing it to remain on the stains for six or eight hours, and is then rubbed with a clean cloth. The remaining dry substance is then carefully taken of by means of a knife. The injured places are now brushed over with clean water, pressed between cloths and dried. If the stain is not then removed, a rubbing with dry bread will easily take it off. To restore the finish, a thin solution of gum arabic, or in many cases beer is preferred, is brushed on, then dried and carefully ironed. By careful manipulation these stains will be successfully removed.

TO EVICT RATS.—A writer in the *Scientific American* says: "We clean our premises of the detestable vermin, rats, by making whitewash yellow with copperas and covering the stone and rafters with it. In every crevice in which a rat may go we put the crystals of the copperas and scatter in the corner of the floor. The result was a perfect stampede of rats and mice. Since that time not a footfall of either rats or mice has been heard around the house. Every spring a coat of yellow wash is given the cellar as a purifier, as a rat exterminator, and no typhoid, dysentery, or fever attacks the family. Many persons deliberately attract all the rats in the neighborhood by leaving the fruits and vegetables uncovered in the cellar, and sometimes even the soap is left open for their regalement. Cover up everything eatable in the cellar and in the pantry, and you will soon starve them out. These precautions, joined to the services of a good cat, will prove as good a rat exterminator as the chemist can provide. We never allow rats to be poisoned in our dwelling. They are so apt to die between the walls and produce annoyance."

HOW TO COOK RICE.—Rice is becoming a much more popular article of food than heretofore. It is frequently substituted for potatoes at the chief meal of the day, being more nutritious and much more readily digested. At its present cost, it is relatively cheaper than potatoes, oatmeal or grain-grits of any kind. In preparing it only just enough cold water should be poured on to prevent the rice from burning at the bottom of the pot, which should have a close-fitting cover, and with a moderate fire the rice is steamed rather than boiled until it is nearly done; then the cover is taken off, the surplus steam and moisture allowed to escape, and the rice turns out a mass of snow-white kernels, each separate from the other, and as much superior to the usual soggy mass, as a fine mealy potato is superior to the water-soaked article.

LEMON CAKE.—Two cups of flour, two of sugar, six eggs, six tablespoonfuls of butter, four of milk, two teaspoonfuls of cream tartar sifted with the flour, and one teaspoonful of soda. Beat all well together, and bake in two loaves. For the jelly to use with it, take three-fourths of a pound of sugar, one-fourth of a pound of butter, six eggs, the rind of three lemons grated, and the juice. Beat the sugar, butter, and eggs thoroughly together, and set in a dish of hot water until heated, then add the grated lemon and juice; stir until thick enough and quite smooth, then split the cake and put this jelly in while warm. It is very delicious.

Health Column.

Infant Food.

There are about 20 European preparations styled infant foods, and at least twice as many American, all of which profess to furnish complete nutrition for the infant during the first few months of its existence, while yet the conversion of starch into dextrine and sugar is beyond the capacity of the untrained digestive function. The examination of these with a microscope, assisted by such simple tests as iodine, which turns starch cells blue, and gluten (or albuminous) granules yellow, has engaged the careful attention of Dr. Ephraim Cutter, of Cambridge, and his reports will startle most mothers who have relied upon the extravagant pretenses set forth by the circulars of manufacturers. Eliza McDonough, who preceded Dr. Cutter in this field, has been in a measure discredited; but it appears that her assertion—that the starch, so far from being transformed into dextrine, was not sufficiently altered to render the recognition of its source difficult, whether from wheat, corn, rye or barley—was strictly true, and that these pretentious foods are, without exception, nearly valueless for dietetic purposes. All of them consist of baked flour, mainly, either alone or mixed with sugar, milk, or salts. In some cases, the baking has been very inadequately performed, and the doctor found one that consisted merely of wheat and oats whose starch cells were proximately in their natural condition. The general result of Dr. Cutter's examination may be stated in brief terms as follows:

There was scarcely a single one of the so-called infant foods that contained a quantity of gluten as large as that contained in ordinary wheat flour. That is to say, a well-compounded wheat gruel is superior to any of them, particularly when boiled with a little milk; and others are in error who place the slightest dependence upon them. As respects one very expensive article, professing to possess —— parts in every 1,000 of phosphatic salts in connection with gluten, Dr. Cutter was unable to find any gluten at all. The thing was nearly pure starch, sold at an exorbitant price for nerve and brain food, and a great remedy for rickets. So all through the list. Sometimes a trace of gluten was present; more frequently none at all. In one case, there were 90 parts of starch to 10 of gluten; but this was exceptional, and the majority were less valuable, ounce for ounce, than ordinary wheat flour. Considering the pretensions that have been put forth by the manufacturers of these foods, some of them sustained by the certificates of eminent physicians, the report of Dr. Cutter is one of the dreariest comments upon human nature that has recently fallen under the notice of the journalist. But if the revelation he has made of fraud and pretense on the part of manufacturers in this field will serve to protect mothers from further betrayal, and to rescue infant life from quack articles of nutriment, his work, though giving a tremendous shock to our sensibilities and to our faith in medical certificates, will not have been done in vain.—*New York Times.*

The Cause of Bright's Disease.

What is the cause of so much Bright's disease? asks a victim of this malady. To which we reply, there are many causes. One is the taking of a cold. A cold may go to the kidneys as well as the lungs, and do a great deal more harm there, for the tubules in this organ are very multitudinous and very minute. When inflamed they suffer in the same way that the nasal and bronchial tubes do; that is, get catarrh. A slight inflammation of these tubules is called a catarrhal one; but when it becomes deeper seated, then it is called croupous. About the only difference is one of degree, not of kind. Another cause of the disease is the excessive use of flesh food, and of hot, stimulating spices and drinks. Lager beer, it is said, is a frequent cause of Bright's disease. Alcoholic drinks, we know are. Many medicines are said to cause it, as, for instance, chlorate of potash, used so freely in many diseases; and it would not be at all strange if it was also caused by the use of the various baking powders so much in vogue. A person suffering from this malady should lead a sober and careful life, live on a plain, unstimulating, but nutritious diet, take moderate exercise, avoid lean meat, or use it only sparingly, and keep the skin active, so as to relieve the kidneys as much as possible from work. In its first stages, its ravages may be stayed, and, if the constitution be a good one, the person may live to a good age. In its worst form there is no remedy of much avail. Those advertised by the quacks, and, we are sorry to say, those given by the doctors, are of about equal worth, and both are valueless.—*Herald of Health.*

THE ELECTRO-MAGNET. — The question—"What constitutes the strength of the electro-magnet"—is answered through the *Scientific American*, as follows: The magnetic strength of an electro-magnet depends upon the size of the iron core, the number of turns of wire surrounding it, and the strength of current charging the wire of this helix. In practice these helices are seldom wound to a diameter exceeding three times the diameter of the core, as what is thereby gained in magnetic moment is more than lost in increased resistance of helix circuit.

Worth Knowing.

Cutting the "Key Log."

The first thing to be done is to find out where the jam occurred, and then to discover what is called the "key log," that is to say, the log which holds the base of the "jam." An old experienced "stream driver" is soon on the spot, for the news is soon carried up stream that there is a "jam" below. Every minute is of consequence, as logs are coming down and the "jam" increasing in strength. The "key log" being found, there is a cry for volunteers to cut it. Now, when you consider that there are some hundred big logs of timber forming a dam, and the instant the key log is cut the whole fabric comes rushing down with a crush, you will see that unless the axe-man gets instantly away, he is crushed to death. There are usually in a camp plenty of men ready to volunteer; for a man who cuts a key log is looked upon by the rest of the loggers just as a soldier is by his regiment when he has done an act of bravery. The man I saw cut away a log which brought down a whole jam of logs was a quiet young fellow, some 20 years of age. He stripped everything save his drawers; a strong rope was put under his arms, and a gang of smart young fellows held the end. The man shook hands with his comrades, and quietly walked out on the logs, axe in hand. I do not know how the loggy-road one felt, but I shall never forget my feelings. The man was quietly walking to what very likely might be his death. At any moment the jam might break of its own accord, and, also, if he cut the key log, unless he instantly got out of the way, he would be crushed by the falling timber. There was a dead silence while the keen axe was dropped with force and skill on the pine log. Now the notch was near half through the log; one or two more blows, and a crack was heard. The men got in all the slack of the rope that held the axe-man; another blow, and there was a crash like thunder, and down came the wall of timber, to all appearances on the axe-man. Like many others, I rushed to help haul away the poor fellow; but, to my great joy, I saw him safe on the bank, certainly sadly bruised and bleeding from sundry wounds, but safe.—*The Field.*

How to Make Brick Walls Water-Tight.

The Sylvester process was successfully applied to the interior walls of the gate-houses of the Croton reservoir in the Central park in this city, in 1866, on the advice of the late William Dearborn, C. E., and under the immediate supervision of George S. Greene, Jr., C. E., now the engineer-in-chief of the department of docks.

The process and its results in this case are described fully by Mr. Dearborn in a paper read by him before the American Society of Civil Engineers, May 4, 1870.

The process consists in using two washes or solutions. The first composed of three-quarters of a pound of castile soap dissolved in one gallon of water, laid on at boiling heat with a flat brush. When this has dried, 24 hours later apply in like manner the second wash of half a pound of alum dissolved in four gallons of water. The temperature of this when applied should be 60° to 70° Fahr. After 24 hours apply another soap wash, and so on alternately until four coats of each have been put on. Experiments showed that this was sufficient to make the wall water-tight under 40 ft. head of water.

At the time of application the walls had been saturated and the weather was cold. The gate chambers were covered over and heated thoroughly with large stoves. The drying, cleaning the walls with wire brushes, and applying the mixture, took 96 days. Twenty-seven tons of coal were used for the drying, and one ton for heating the soap solution. Eighteen thousand eight hundred and thirty square ft. of wall were washed with four coats. The drying and cleaning of the walls cost six and a half cents per square ft., and the plant, materials, and labor of applying the wash cost three and three-eights cents per square ft.

A NOTABLE STEEL CHAIN.—There has lately been made at Hull, England, a chain of Siemens steel; 180 yards long, containing more than 3,200 links, held together by about 850 steel pins. It is intended for lifting purposes, has an estimated strength of 60 tons, and is thought to be the largest chain of its kind ever made.

TO MAKE STENCIL INK.—A good and cheap stencil ink, in cakes, is said to be obtained by mixing lamp-black with fine clay, a little gum arabic or dextrin, and enough water to bring the whole to a satisfactory consistency.

A ROAD locomotive for war purposes, lately tried, weighed 28½ tons, and drew easily 40 tons' weight of guns mounted on their carriages, fully equipped. Its maximum traction power is 150 tons, and its cost of maintenance is about 30 cents an hour.

A SIMPLE precaution, costing neither money nor labor, is said to increase the durability of posts put in the ground by 50%. This is simply by taking care that the wood is inverted, *i. e.*, placed in the opposite direction to that in which it grew.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "good of the Order."

Olympic, 127.

At the last meeting of Olympic, June 6th, two petitions were received, and the M. W. degree given to one candidate. The members of Olympic take a just pride in their membership, and are among the most active and enthusiastic Workmen in San Francisco. The fraternal acts extended to the widow of our late Bro. O'Neil are commendable, and should be followed by other Lodges.

Memorial, 174.

Memorial, 174, held a very interesting meeting on Monday evening, the 6th inst. The J. W. degree was conferred on two candidates, and the M. W. degree on two, in a very creditable and correct manner. No Lodge in San Francisco does the work better. There was a large attendance, Representatives from several Lodges, including a number of our Grand Lodge officers. There was one application received, and two candidates were elected to receive the degrees. After the business of the Lodge had been transacted, a feast of reason was inaugurated by inviting E. Danforth, District Deputy, to make a few remarks. A feature of his interesting speech was to bring up the late case of swindling that had been practiced, and whose victims were several widows of Workmen. Bro. Jordan, M. W. of Spartan, Bro. Breed, M. W. of San Francisco, Bro. Reading, P. M. W., Bro. Gyselaar, P. M. W., Bro. Smith, of Spartan, Bro. Bordwell, of Excelsior, Bro. Alexander Foreman, of Spartan, Bro. Poland, District Deputy, and Bro. Briggs, from Nevada county, made short speeches that were well received. It was a grand meeting, and had a full attendance until the close.

Myrtle, 42, Visits Harmony, 9.

On June 3d Harmony, No. 9, had a full delegation from Myrtle, 42. These two Lodges meet in adjoining halls in Pythian Castle, on the same evening. Previous to this visit, Myrtle, 42, gave the J. W. degree to one candidate and Harmony, 9, gave the J. W. degree to three candidates. The usual civilities were extended to the brethren of Myrtle, after which Bros. A. W. Loane, P. M. W., J. M. Lyons, Foreman, Chas. E. Baker, P. M. W., L. T. Henry, P. M. W., H. M. Morris, Receiver, made short felicitous and timely speeches, followed by a humorous song from Wm. H. Thackery, P. M. W., and C. T. Whiten, P. M. W., and a character reading from Prof. Eastman. As Myrtle, 42, was started by members of Harmony, it seemed like a family gathering.

Olympic, 127.

At the meeting of Olympic Lodge, No. 127, Tuesday, June 6th, Charles D. Dunn, Foreman, resigned and Col. David Wilder was elected in his place. Col. Wilder, our present efficient County Clerk, is one of the charter members of Olympic, a gentleman of fine executive ability, and has the respect and love of all members of his Lodge. He will probably be the next M. W. of Olympic. We congratulate this Lodge on the selection of a gentleman so well and favorably known for this important position.

Washington, 60.

Although there has not been of late a rapid advance in membership, yet there has been, and is now, a steady growth that has swelled its membership to the 200 mark. Washington, No. 60, has a large number of our solid business men as members, and while, as a rule, they do not visit their sister Lodges as much as some of our city Lodges, their meetings are well attended and interesting. On Thursday evening, June 8th, one candidate received the J. W. degree. After some preliminary arrangements for the coming entertainment, a short time was spent in a real good, sociable time, Bro. Wolfsohn, P. M. W., Lindsey, P. M. W., Knight Organist of Washington, making interesting and instructive remarks.

Burns, 68.

On Thursday evening June 8th, a very interesting meeting was had. The M. W. degree was given to one, and arrangements made to visit Los Gatos Lodge, on Saturday evening, 10th inst. There was a feast of reasons and an enthusiastic Workman, Bro. Samuel Block, M. W. of Tombstone Lodge, Arizona, was treated in such a cordial and kindly manner that elicited from him his sincere thanks, and for him requests us to extend to Burns Lodge his warmest regards.

Oakland Lodge Locals.

Monthly Celebration of Occidental, 6

The brethren of Occidental, No. 6, had a grand celebration at Hansen's hall, West Oakland, on Wednesday evening, June 7th. This large hall was filled to its utmost capacity, not even standing room being left. J. J. Schultz, District Deputy, as master of ceremonies, in a short speech, gave a succinct history of Occidental, No. 6, and in her name welcomed one of the finest audiences that has ever met in the city of Oakland. The following choice programme was rendered: Piano solo, Miss Alice Walter, which was well received; quartette by Pacific Club, Bros. Reed, Sanford, Gurnsey and Smith, "Farewell," finely rendered and heartily applauded; recitation, Mr. M. Forster, "Charge of the Light Brigade," a good effort that received a hearty encore, and in answer to a double recall sang several humorous songs; piano solo, Miss Maude Martin; recitation, Mrs. Frederick Barkhouse, "Merica's Conversion; this talented lady rendered this character and humorous piece in a most interesting manner, and at the close was heartily encored; solo, Mrs. Herman Reinhart; this accomplished and sweet singer was greeted with a storm of applause and a hearty recall; ventriloquist, J. B. Frost; this gentleman is well known in his inimitable imitations, and in his interesting delineations was recalled for the eighth time, keeping his audience in the highest humor; piano solo, "Whispering Wind," Miss Minnie Weeks, pupil of Prof. E. S. Bonelli, of San Francisco, a fine effort that most kindly received a hearty encore; banjo solo, Bro. S. P. Babcock, a humorous song that kept his audience in the highest glee, and received a hearty recall; recitation, "The Dandy Fifth," W. T. Doyle, of the Baldwin theater; this was a masterly effort that kept the audience spell-bound, and at the close, in answer to numerous recalls, recited a humorous piece that kept his audience in a roar of laughter; piano solo, Miss Lizzie Hudson, a fine effort that was well received; baritone solo, Mr. Herman Adler; this gentleman has a fine and well-cultivated voice, and his effort was well received; character recitation, Bro. Logan Paul, of the Baldwin troupe; this rare treat was duly appreciated, and in answer to a recall, gave a comic piece; piano duet, Mrs. Hawket and Miss Webb, an artistic and pleasing effort that was kindly received; comic song, Mr. John F. Foster; this was a pleasing character song and recitation that fittingly closed one of the best-conducted and most successful entertainments of the season. The hall was cleared of benches and dancing was indulged in until a late hour. Supper was provided for those who desired, and a very enjoyable evening spent.

Lodge Locals.

Stockton, 23.

This Lodge gave an ice cream festival on the 27th ult. to the children of members of the Order. The Stockton *Herald* says of it: "A more delightful and highly enjoyed event could not be desired. There were probable not less than 500 persons, old and young, in the hall, the actual number of children being 130. Strawberries, ice cream and cake in abundance were spread upon two long tables occupying the center of the large hall. These were reserved until the close of an interesting programme of musical and literary exercises; but it is safe to say that charming as the music was, the grand and tempting spectacle on the tables was even more inviting to the eyes of old and young alike, than the harmony of sweet sounds to the ears. The proceedings were opened with music by the orchestra, under the leadership of Prof. Dreyfous. Next appeared Master Workman Andrew M. Cadien, who delivered a brief but appropriate address. Then followed the exercises, of which we give a brief outline: Miss Lizzie Hale, aged 12 years, admirably recited "The Face Against the Window Pane." Her effort deserved and was accorded hearty applause. Edith Williams, a six-year-old fairy, sang a solo, "Twinkle Little Star." To say that the audience was delighted conveys but an imperfect idea of the enthusiastic demonstrations of pleasure on the part of the throng. Douglass Hall, a young man, recited "Bernardo del Carpio" in capital style. George Frank, John Heck and Ed. Haas, three pupils of Mr. Dreyfous, gave a violin trio, which set the applauding machinery of the throng into full operation. The applause was loud, long, and well merited. "Not So Easy," was a recitation admirably given by Walter Williams, who entered into the spirit of the piece with astonishing vim. Misses Lehe sang the duet "Longing for Spring," in a manner that elicited hearty approval. Amelia Hecht, a sparkling little lady, recited "Touch Not," and evidently fully understood and honestly meant every word she uttered. Miss Flora and Zena Bell executed in fine style a piano solo, which greatly pleased the audience. "Lady Clara Vere de Vere" was read in excellent style by Miss Abbie Cadle. But the crowning triumph in the exercises of the evening was won by Miss Lizzie Hale, who recited "Nobody's Child," in costume. She appeared in a ragged dress and without stockings or shoes, and recited the piece with a depth of feeling and pathos really surprising in one so young. The applause that followed showed very conclusively the high estimate placed upon the talented girl's effort. The exercises concluded, the children, under the direction of the managers, were seated at the tables, and their parents and other adult members of the Order of Workmen waited upon them. The strawberries, ice cream and cake vanished like snow before a strong sun, and the scene was one of the most delightful imaginable. The entertainment concluded with dancing, and the festival was one of those joyful occasions that will be treasured in memory by the old and young present as long as they live.

Pacific Lodge, No. 7, will give a semi-annual entertainment on Thursday evening, 8 o'clock, 29th of June, at A. O. U. W. hall, at the corner of Twelfth and Franklin streets. Prof. N. L. Le Noir, organist of Pacific, will have charge of the affair, which is a warrant that it will be one of the best. Especial efforts will be made to eclipse former ones.

Bay View, No. 159, entertainment, which was to have taken place on the 30th of June, has been postponed to some time in July, of which notice will be given.

Lookout Lodge.

Editors Watchman:—Lookout Lodge, No. 20, elected Bro. W. D. Morris Past Master Workman, vice Bro. D. C. Brownell resigned; Bro. F. H. Roberts Overseer, to fill vacancy caused by Bro. C. A. McCash, Foreman, taking the M. W. chair vacated by Bro. W. D. Morris, and Bro. L. G. Brownell, Overseer, filling Foreman's chair vacated by Bro. C. A. McCash. Both officers elect were installed the same night by our District Deputy, Bro. D. C. Brownell. The late resolution, allowing no candidate to be admitted into a subordinate Lodge until his medical examination has been approved by the Grand Examining Board, enacted by the last Grand Lodge, is one which, in my view, must work a hardship to subordinate Lodges, as well as to applicants for initiation. Such a regulation borders too much on official red tape for the good of our Order; for the quicker a candidate can be admitted into our Lodges after application, if he is to be admitted, the better for the Order and the one to be received. Yours in C. H. and P.,

L. C. Carpenter, Recorder.

Sacramento Lodges.

Editors Watchman:—I have just returned from visiting Sacramento Lodge, where I have been much edified and entertained. Sacramento Lodge is looking up and doing all in their power to make their meetings enjoyable; and if they should ever fail to be pleasant, it certainly will not be the fault of the present officers, for a more earnest, painstaking corps of officers never honored a Lodge with their services. By their friendly, cordial greeting a stranger is made to feel perfectly at home in a very few minutes. The M. W. degree was conferred to-night in a creditable and impressive manner, and the general business of the Lodge conducted and finished in a smooth and business-like manner. Upon calling the "Good of the Order," Bro. Recorder Katzenstein was called to the floor. Bro. Katzenstein, as you will remember, was created a Past Master at the last session of the Grand Lodge for faithful service as Recorder, for the prescribed time and none merits the honor more. He has also just returned from the East, where he has been as a delegate to the Grand Temperance convention, held at Charleston, S. C., and this evening held the Lodge in breathless attention for an hour while, in his fluent manner, he recounted the sights and scenes of his journey, and recalled reminiscences of the late unpleasantness of many of the historic battle-fields which he visited. The hour seemed but a moment, and the expressed desire was that Bro. Katzenstein would give another of the series next meeting night. Bros. Foreman Smith, Overseer Blank and Financier Hopkins have been keeping the Lodge lively lately, by a display of their inventive genius in devising and discussing subjects of interest, which gave full play to their legal and parliamentary education which, I am happy to say, seems not to have been neglected, and I shall be in regular attendance in anticipation of a continuance of the same. I enclose herewith a copy of notices upon the back of which is printed an extract from the Watchman which was read in the Lodge, and by unanimous vote ordered printed, showing an encouraging appreciation of your efforts, and I think other Lodges would do well to pattern after Sacramento in this matter. Union Lodge is also doing finely, but as I am to have the pleasure of sending you the manuscript of one of her ablest orators for publication in your next issue I will not anticipate. The roll of Watchman you sent has been distributed where they will do the most good, and hoping they may be the means of adding to your list of subscribers, I remain yours,

Sacramento, June 6th. B. Muddled.

Valley Lodge, No. 2.—The Salt Lake *Tribune*, of May 28th, says: Pursuant to a call issued by J. W. Kinsley, Deputy Grand Master Workman for this jurisdiction, Valley Lodge, No. 2, of the Ancient Order United Workmen, was instituted in this city last evening, at Odd Fellows' hall. The following list of charter applicants were elected: Eli H. Murray, Governor of Utah; John A. Hunter, Chief Justice Supreme Court; A. L. Thomas, Secretary of Utah Territory; Boyd Park, merchant; J. F. Allen, druggist; W. A. Nelden, clerk; H. G. McMillan, Deputy Clerk; J. Leviberg, merchant; S. J. Jonassen, attorney; E. A. Ireland, U. S. Marshal; W. E. Smedley, insurance agent; George Arbogast, Grand Master of Odd Fellows; Edmund A. Murphy, Grand Representative of Odd Fellows; J. J. Thomas, clerk; A. N. Hamilton, *Tribune*; W. H. Yearian, merchant; J. H. Woodman, clerk; Louis Hyams, Grand Secretary of Odd Fellows; H. McMasters, Land Officer; W. F. James, Grand Master of Masons; C. B. Adams, clerk; Robert Gorlinski, draftsman; M. L. Powers, capitalist. The following officers were elected and installed: Past Master Workman, George Arbogast; Master Workman, J. F. Allen; Foreman, S. J. Jonassen; Overseer, W. H. Yearian; Recorder, Louis Hyams; Receiver, Boyd Park; Financier, C. B. Adams; Guide, J. H. Woodman. The Lodge voted to keep its charter open for one month and to allow persons to be admitted during the term for the minimum fee of $15. The name "Valley" was adopted in honor of Valley Lodge, No. 30, of San Francisco, which is the largest lodge on this coast, having now over 900 members. The new lodge will probably meet again next Wednesday evening for the admission of new members.

Reunion Picnic at Decoto.

The third grand annual picnic of the Ancient Order of United Workmen of Alameda county was held at Dry creek, on the line of the C. P. R. R., near Haywards, about 20 miles from San Francisco, on Saturday, May 27, 1882. The weather was extremely favorable, and the Workmen turned out in large numbers. There was a special train from Livermore and one from San Francisco; free conveyances to and from the picnic grounds were provided. The following was the Committee of Arrangements: Haywards Lodge, No. 18, L. Palmtag; Mission, No. 56, H. Dusterbery, J. Sanderer, G. Stanley; Reliance, No. 93, Alvarado, W. T. Rolph, A. Lee, Wm. Wills; Newark, No. 160, W. H. Nesmith, G. Lowrie, D. Butler; Eden, No. 204, San Lorenzo, E. Hathaway, H. W. Meek, E. O. Webb. Lodges of Livermore, Pleasanton and San Leandro also participated. The music was furnished by Schuppert's band. Dancing commenced early and continued until a late hour. The following was the Floor Committee: E. C. Bragdon, D. C. Hibbard, Geo. Harvey and Jos. McKinney. Bro. E. C. Hare, the owner and proprietor of the picnic grounds, deserves great credit and special mention for the improvements he has made for the benefit of pleasure seekers. The pavilion has a floor equal to the finest ballroom. The grove is marked with the mighty oak and stately sycamore, nature's handiwork, not being spoiled or marred by any attempts of man to increase its great natural beauties.

The grove stands amid sloping hillsides and a perennial stream of pure water running directly through it, thus offering advantages obtained only by nature. In beauty of location it cannot be excelled. The ride to this point is one of the most delightful in the vicinity. One of the remarkable features of the day was the prohibiting of any liquors of any kind being sold on the grounds. At 1 P. M. all the workmen assembled and marched to the pavilion, where they welcomed the Orator of the day, Mr. P. M. Fisher, P. M. W., of Mission Lodge, No. 56. Mr. H. Dusterbery, P. M. W., of Mission Lodge, No. 56, opened the exercises by a short address, in which he welcomed all to the grand reunion of the A. O. U. W., and wished, in behalf of the Order, that at the next reunion all might be enjoying health and prosperity. The members then sang the opening ode, at the close of which P. M. Fisher, P. M. W., delivered an oration, which we publish in this issue. At the conclusion, all resorted to the lunch-baskets to replenish their sharpened appetites.

The afternoon was passed with a variety of amusements—games, races, tugs-of-war, dancing, and target shooting with Ballard rifles. The Committee on Games were: Wm. Wills and A. Robinson. The following were some of the winners of prizes:

Race for Boys Under Ten Years—First prize, Ed. Weston; second prize, F. Crosby.

Girls Under Ten Years of Age—First prize, Laura Hare.

Sack Race for Boys—First prize, John Murphy; second prize, A. Crosby.

Foot Race for Boys Under Twelve Years of Age—First prize, P. Nhel; second prize, Ed. Weston.

Foot Race for Young Men—First prize, Jas. McKenny; second prize, Jos. Morris.

Foot Race for Boys Fifteen Years Old—First prize, P. Nichols; second prize, Orin Prouse.

Girls' Race—First prize, Lizzie McCoy, second prize, Mamie Rose.

Three-legged Race for Boys Under Ten Years of Age—Two first winners, J. Murphy and L. Olihan; two second winners, Frank Rose and F. Martin.

Race for Boys Under Fifteen years of Age—First prize, C. Nhel; second prize, John McCoy.

Race for Girls Uunder Ten Years of age—First prize, Lizzie McCoy; second prize, Minnie Rose.

Race for Girls Under Twelve Years of Age—First prize, Lizzie St. Clair; second prize, Maud Lowell.

Sack Race, for All—First prize, J. Murphy; second prize, F. Martin.

Foot Race for Girls Under Fifteen Years of Age—First Prize, Amelia Lewis; second prize, Lu Mosher.

Race for Young Ladies—First prize, Rose St. Clair.

Race for Girls Under Fifteen Years of Age—First prize, Lu Mosher; second prize, Ollie Jader.

Tug-of-War by Workmen and Wives.

The prizes were all cash prizes, which was a very commendable feature of the committee.

Appreciative.—We have received a copy of the Pacific States Watchman under date April 15. It is the first copy that has reached us this year. We are glad to see it still lives; we had feared otherwise. Society journals have but a precarious existence at best, but the Watchman is an exceptional publication—always full of good things; and we trust that its life may be a long one, and that its face may never be absent from our table, for we do love to clip from it.—*Michigan Herald.*

Attorney General Palmer, of Pennsylvania, under instructions from Commissioner Foster, has made application to the Dauphin County Court for a mandamus compelling 213 so-called life insurance corporations, or combinations, to show cause why their charters should not be revoked.—*Fraternal Censor.*

Academy of Sciences.

The regular semi-monthly meeting of the California Academy of Sciences was held Monday evening last, Vice-President J. P. Moore in the chair. A. H. Breckenfeldt and Frank P. Deering were proposed as resident members. Among donations to the museum were the following: From Dr. Slocum, a stone whirl-spindle and a human skull from an Indian grave near Corinne; from B. B. Redding, a stone pestle from a mound near Salt Lake; from H. H. Bigelow, a stone incense cup with a rattlesnake carved in bas-relief around it, dug up at Casa Grande, Arizona; from B. C. Trueman, a California flying fish from Monterey; from Dr. H. Herman Behr, three red snow plants called *Sarcodes sanguinia*, from the Sierra Nevada. Vice-President Moore read a paper by Dr. Arthur Krause, Ph. D., member of the Bremen Geographical Society, suggested by his recent scientific explorations in Alaska, in the southern district of which he spent the past winter, with his brother, among the Indians, collecting information. He said southern Alaska resembled the south-west coast of Norway in its minerals and fisheries, where thousands of pleasure seekers resort annually to enjoy the natural beauty of the scenery. He pronounced Alaska far more valuable than Norway in this and in most respects. He predicted the gradual extinction of the 10,000 or so Indians now in the Territory, especially should the newly discovered gold mines prove as valuable as now anticipated. Some tribes of the coast Indians differ entirely in their language and features from their neighbors. The Chilcat and Chilcoot Indians have monopolized trade with the interior, and are very anxious to keep white traders and other tribes from encroaching on their direct trade between the coast and the Nomadic Indians at the headwaters of the Yukon river. These they reach in three days by the eastern route across the country, by river branches and lakes, with short land portages. The western route takes seven days, and passes are easy. Both routes unite near the Hudson Bay company's abandoned Fort Selkirk, which was destroyed by an expedition of Chilcat Indians. The Chilcats travel by the western and the Chilcoots by the eastern route, and this division is observed under penalty of war. They never use sleds or dogs, but pack their own burdens, using snow-shoes, and have to cross one glacier. Tobacco and blankets are largely dealt in, and they communicate with trading stations from 600 to 1,800 miles up the Yukon.

Mr. Moore described parasitical plants, especially the *Arcuthobium*, a mistletoe that grows on the digger-pine and all junipers, and spreads its glutinous seeds by explosions, through which they are projected and stuck over birds, who thus distribute them. The red snow-plant was first discovered in Siberia 40 years ago, and has only been found on this continent among the Sierra Nevadas.

Dr. C. C. Parry, of the U. S. Bureau of Forestry, described his recent trip through Lower California, where he found new specimens of the flowering ash, evergreen oak, two species of horse-chestnuts, a new and very delicate fine-foliage rose, new ferns, only found in Florida and the Hawaiian islands, and a cactus, valuable for manufacturing purposes, that secretes a hard gum, which, mixed with alcohol, makes a fine varnish, and is useful for painting pottery.

Beacon Light Oil.—The Beacon Light Oil and Commercial Company has been incorporated to import the celebrated beacon light oil, lubricating oils and paint-oline. The majority of this company are leading Workmen, and give assurance that they will keep the standard of their best XXX illuminating oil to the present high grade, 160°. The State Inspector of Pennsylvania says "that the oil shipped to the B. L. O. & C. Co., San Francisco, Cal.; was the best he had ever inspected." Mr. A. Blackman is the General Manager, and his office is 322 Washington.

Bro. E. F. Wilton, merchant tailor, No. 12 Stockton street, is one of the reliable and artistic tailors of this city. He has an enviable reputation as a cutter and fitter of pantaloons, and will warrant his garments to be free from hitching and wrinkling, so common in trowsers.

The Indianapolis Chair Manufacturing Co., whose advertisement appears in this number, is one of the leading and reliable houses of this coast. They have just received by rail a large line of the latest patterns and newest designs of house-furnishing goods, direct from their manufactory. The new Indianapolis patent sofa-bed is one of the neatest and best sofa-beds yet invented.—*Rural Press.*

City of Hamburg.—A fac simile of the City of Hamburg has been transferred to San Francisco in the shape of one of the finest and most complete dry goods stores in the city. Bros. Mobler & Mantz are the genial and enterprising proprietors, 714 Montgomery.

Stockings divided so as to separate each toe, as a glove does the fingers, are now being introduced, and an eminent medical authority recommends them, as they are likely to promote cleanliness, prevent troublesome soft corns, and abolish foot deformity.

Oakland Manufactures.

We see by the Oakland *Times* that nearly all the shares of stock in the Judson Nail factory, offered to the citizens of Oakland, have been subscribed, and the company has decided to locate at the Emory tract, between the railroad and the bay. It was well known from the start that the enterprise would be a paying investment, and no difficulty was experienced in disposing of the stock. Great care was taken to place the shares in the hands of enterprising business men, and the result is that many of our best citizens are stockholders. Among those who have subscribed are Egbert Judson, C. S. Chamberlain, T. P. McFeely, J. Benedict, John Finn, Theodore Green, H. D. Bacon, E. B. Dean & Co., V. D. Moody, F. Delger, A. J. Snyder and J. B. Wyman. The capital stock is $500,000. It is proposed to manufacture horse-shoe nails, tacks, brads, finishing nails, Victor mowing machines, pulleys, hangers, files, etc. The company has such facilities and advantages that it can manufacture the peculiar stock at a much more reduced rate to the purchaser than now. The strongest iron, the Clipper Gap pig iron, of which Mr. Judson is the largest owner, will be used. The enterprise will give employment to 200 persons, and a large number of boys will have an opportunity to learn useful trades. No Chinese will be employed. Next Monday ground will be broken on the site selected, consisting of three acres of land, and the erection of six buildings will be begun immediately. Two buildings will be 100x40 ft. each; the second building, 175x100 ft.; the foundry building, 100x40 ft.; wood shop, 140x50 ft.; warehouse, 160x40 ft., one story in hight.

The factory, being located upon the railroad, and not far from the bay, will have unusual facilities. Mr. Chamberlain, the manager, was in Oakland yesterday, and was jubilant over the splendid prospects. Only a few more shares are to be sold.

Sensible Evidence of the Roundness of the Earth.—In a late session of the Helvetic Society of Natural Sciences, Prof. Dufour spoke of the change which images that are produced upon a great expanse of water undergo, in consequence of the roundness of the earth. If the luminous ray from an object strikes a tranquil lake in a nearly horizontal direction, the image is made upon a convex surface and appears smaller than the object itself. Prof. Dufour arrived at these conclusions by calculation, but he supposed that they could never be verified on account of the difficulty of finding a lake sufficiently calm over a broad extent of surface. His friend, M. Forel, however, informed him that he had seen such images in the lake of Geneva, and that they appeared exactly as the calculation had indicated. Prof. Dufour subsequently found that the days upon which such observations are possible are by no means uncommon, but the images can often be seen on lake Leman, especially if one has a spyglass at his disposal. After having looked for a moment, the roundness of the earth becomes visible as plainly as that of a bowl that is held in one's hand.—*Les Mondes.*

Ants or Monkeys.—Lately Sir John Lubbock has been considering the ant family, and after a protracted investigation declares that "anthropoid apes" must yield the second place in the order beneath man, for his friends the "ants," must be placed there. "When we consider the habits of ants," says he, "their social organization, their large communities, elaborate habitations, their roadways, their possession of domestic animals, and even in some cases of slaves, it must be admitted that they have a fair claim to rank *next to man* in the scale of intelligence." So, according to these theories, it now appears that in intelligence, which is the crowning glory and special attribute of mankind, the monkey must give place to the ant. Many years ago one wise man suggested that some of the gentlemen of leisure, who found time hanging heavily on their hands, would do well to "go to the ant" and "consider her ways and be wise." It seems now that the advice contains more philosophy than has generally been accredited to it.

The Summit of the Earth.—Adolphus Schlagintweit, the immortal, though unpronouncable, explorer of central Asia, calls the highland of Pamir "die Welt-Zinne"—the roof of the world. On the road from Punjaub to Yarkand four passes have to be crossed that are higher than 17,500 ft, and for a distance of 280 miles the halting ground is not below the hight of Pike's peak. On the eastern plateau of the Beloor-Dagh there is a shelter house near a cliff from whose summit the main chain of the Himalayas, with all its giant peaks and immeasurable ice fields, is in full view, from the highlands of Lassa to the sources of the Indus, while in the west the head waters of the Oxus and Jaxartes can be traced to the borders of Cabool, where the peaks of the Hindoo-Koosh, lift their crests of everlasting snow. In the spring the echo of the avalanche resembles the boom of continuous thunder, and in midwinter, when the storm wind sweeps the tableland, whirling pillars of snow scud along the ridges, and often seem to dance together like spectres in their fluttering winding sheets. Our "Land of the Sky," in the southern Alleghanies, must be as a mere piazza compared with that top roof of the earth.—*Popular Science Monthly.*

Colony of Redlands.

The writer, visiting Redlands in the latter part of March last, was very much impressed with the superior advantages this colony seems to possess. The lands are situated at the extreme end of the San Bernardino valley, where it narrows and rises upon the very flank of the grand old San Bernardino mountain. The altitude corresponds with that of the highly favored mesa lands, which are famous for producing the choicest, fairest and earliest of citrus fruits; table, wine and raisin grapes.

No one can fully realize the superior charms possessed by this colony without viewing its beautifully elevated position. Nearly every lot has a delightful outlook upon the bordering hills and mountains, and the towns, plains and cultivated lands spread out before its lawn-like, sloping front.

When the squares between the grand avenues, laid out in the published map, are improved and highly cultivated, as there is every reason to believe they soon will be, the view of the colony itself, from the very sloping position it occupies, promises certainly a more charming picture than that of any of the most favored colonies, preceeding Redlands in the calendar, on the coast.

A scene of great activity prevailed in laying out the wide and sightly avenues, building the reservoirs and latest improved system of water-pipes and distributing gates; manufacturing upon the ground, at different points, an immense amount of durable cement water-pipes, ranging from 4 to 24 inches in diameter; laying pipes and breaking up new ground. Altogether it was such an outdoor industrial show as but few persons view in a lifetime, and one that seemed to reflect great credit upon its projectors and enterprising managers.

Realizing the importance of a right start in colony building, Messrs. Judson & Brown determined to invite the best class of settlers only to Redlands. They wish to protect the town, laid out for its business center, from intrusion of intoxication dealing saloons, with their associated evils and trouble-dealing accompaniments.

The strength of this colony will be greatly advanced by thus associating a band of worthy settlers who will firmly co-operate in worthy undertakings only, and stand by each other in sustaining the good social and business reputation of the community.

Taking advantage of the experience of earlier colonies, we do not see why it should not be demanded that Redlands shall, in many particulars, be an improvement upon others. In another column will be found a more minute mention of this worthy enterprise, published by the representative press of Riverside, in the same county.

Bro. A. P. Adams, corner Fremont and Mission, manufactures what is termed condensed coffee, which is put up in cakes ready for use. It is made of the best coffee, without chickory. Try it, and have the most delicate coffee you ever tasted.

The members of Washington No. 60, will give a social entertainment in their Lodge-room on Thursday evening, June 22d. Taking the past socials as a criterion, we may expect a very creditable and pleasant affair.

Four beneficiary certificates were paid last week, aggregating $8,000.

There are in the province of Ontario 171 Lodges; having a membership of 5,036.

Tribute of Respect.

[In Memoriam.]

Hall of Harmony Lodge, No. 9, A. O. U. W., San Francisco, May 20, 1882.

To the Master Workman, Officers and Members of Harmony Lodge, No. 9, A. O. U. W.—Dear Sirs and Brothers:—We, your Committee, appointed to draft resolutions upon the death of BRO. SAMUEL HENRY, herewith submit the following:

Whereas, It has pleased Almighty God, the Supreme Ruler of the Universe, to remove from our midst our esteemed brother, SAMUEL HENRY, and

Whereas, It is but just and proper that this Lodge pay a tribute of respect to his memory; therefore, be it

Resolved, That the charter of this Lodge be draped in mourning for 30 days.

Resolved, That this Lodge tender his bereaved widow and children its sincere and heartfelt sympathy in their deep affliction.

Resolved, That while this Lodge deeply deplore the loss of our departed Brother, we feel he has gone to a better, brighter and happier world, and there will be justly rewarded for his good deeds and actions on this earth.

Resolved, That these resolutions be spread upon the records of this Lodge, a copy thereof sent to the bereaved widow of our deceased brother, and a copy sent to the Pacific States Watchman, for publication.

Wm. Decker,
Thos. H. Welton,
Committee.

Application of Electricity.

The science of Medical Electricity, as developed, is one of the crowning triumphs of the day. As a curative agent, to restore vitality and rehabilitate a broken constitution, it has the endorsement of some of the leading citizens of this country. Notable in the profession in applying this vital principle is Bro. W. J. Horne, 702 Market street, proprietor and manufacturer of Horne's Electro-Magnetic Belt. It has received first premiums at the State Fairs 1880 and 1881, and Mechanics' Fair 1881, but the best endorsement is the growing demand for this incomparable belt.

A New Educational Institution.

The educational institutions of California are a credit to the Pacific coast. Our public schools are unsurpassed, and the liberality of the people toward them is proverbial. There is also a group of most excellent private schools and seminaries, to which young people are sent from all parts of the coast.

The newest of the private institutions is the Harmon seminary for young ladies, at Berkeley. It will be a new school in a bright new building, but it will be in charge of Rev. S. S. Harmon and Mrs. F. W. Harmon, educators who for more than 30 years have been known by their works in different parts of the State. The institution is to be a quiet, home-like school, which will endear itself to the affections of the pupils, and which will in turn benefit them by the influence of home guidance and guardianship, as well as by the weightier matters of the class-room. As shown in the engraving, the front portion of the building rises three stories, and is about 50x60 ft. upon the ground. Back of this is the central portion, 30x100 ft., two stories high, with a two story projection in the rear 20x32 ft. Upon the left of the main hall are the reception-room and two music-rooms. Upon the right is the large school-room. The ground floor of the central portion of the building contains the dining-room and four recitation-rooms, with cloak-room and side entrance for day scholars. The ground floor of the rear projection is devoted to the culinary department. The upper floors, aside from music and art-rooms, will be chiefly devoted to scholars' apartments.

It is the purpose of Mr. and Mrs. Harmon, and those associated with them, to establish an institution for young ladies which will be first-class in every particular. It is expected that the work of the seminary will arrange itself in several departments. The institution will be complete in itself, in that it will have a regular course of instruction, for which diplomas of graduation will be awarded. It will also embrace a department of instruction with a special reference to the preparation of young ladies who desire to enter the State University. In addition, there will be a conservatory of music and courses of instruction in the fine arts, modern languages and *belles lettres*, in each of which will be secured the services of masters of recognized superiority. In all courses there will be a disposition to place the institution abreast of all true progress in the art of instruction and the choice of studies for the curriculum. The first term will open August 3, 1882.

Mr. G. D. Morse, whose photograph gallery has been established in this city over 11 years, has just removed to the most complete, artistic and elegant rooms on the coast, at Phelan's block, Market St. The ascent to the gallery is by hydraulic elevators from Market and O'Farrell streets. On the fifth floor the exhibition gallery is reached, and here can be seen the magnificent work for which this establishment is so widely known. There are five parlors, all most elegantly and sumptuously fitted. The most elaborate of these is kept for ladies in evening costume, bridal parlors, etc. The photographic rooms are furnished with all the latest appliances, mechanical inventions and other necessaries of the photographic art—the light is perfect and the surroundings so beautiful that a visitor, free from all disturbing elements and with mind harmonized, looks his best, and is sure to make a good picture. Mr. Jenks, whose works in oil painting are so noted, Mr. Koch, who has a great reputation for ivory-type and water colors, Mr. Hasselman, a crayon and porcelain painter, and Miss Buckman, a fine colorer of "cabinets," locket pictures, etc., are among the artists employed there. With such an establishment, success and overwhelming patronage must result, and we strongly recommend all our country friends when they visit San Francisco to pay a visit to this, one of the most magnificent galleries in America.

The Protrero Ranch dairy, of which Bro. William Schlothan is proprietor, furnishes pure milk to families at lowest rates. Those wishing milk from one cow can have it. Orders addressed, W. Schlothan, Howard and Third streets, will be promptly filled and satisfaction guaranteed.

Bro. W. S. Reynolds, General Land agency, 531 California street, between Montgomery and Kearny streets, makes a specialty of buying and selling farms, farming lands and suburban homes. He has a large list of choice property from all parts of the State, and is a reliable and responsible gentleman.

Bro J. W. Watson, Assistant Grand Recorder, is at his post attending to the duties of the office, as usual, in that correct and careful manner that is characteristic of this faithful and efficient servant of the A. O. U. W.

The editor of the Watchman acknowledges the receipt of invitations to the Grand Floral Reception of Ashler, No. 165, Alameda, which took place June 3d, and an account of which is elsewhere given in this number.

If you wish to see the finest and most extensive line of men's furnishing goods go to J. H. Carmany, No. 25 Kearny st. Shirts made to order, and the latest patterns in stock just arrived.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi-annually in advance. If errors or omissions are noticed, please write the office direct.

CALIFORNIA.

Our Mountain Lakes.

As the summer heat becomes more and more oppressive, the dwellers in the valleys will flee as birds to the mountains to breathe the clear, cool air, and enjoy the crystal waters girt about by the grand forests of the Sierras. The mountain lakes are the chief centers of resort, and they have a charm peculiarly their own.

We would make special reference at this time to the far-famed Donner lake, which is shown in the engraving on this page. As introductory to his well-known book on the "Fate of the Donner Lake Party," C. F. McGlashan introduces the following description of the lake, which was the scene of their dread sufferings, and the death which brought to many of them release from woes unspeakable.

Three miles from Truckee lies one of the fairest and most picturesque lakes in all the Sierras. Above and on either side are lofty mountains, with castellated granite crests, while below, at the mouth of the lake, a grassy, meadowy valley widens out and extends almost to Truckee. The body of water is three miles long, one mile and a half wide, and 483 ft. in depth.

Tourists and picnic parties annually flock to its shores, and Bierstadt has made it the subject of one of his finest, grandest paintings. In summer its willowy thickets, its groves of tamarack and forests of pine, are the favorite haunts and nesting places of the quail and grouse. Beautiful speckled mountain trout plentifully abound in its crystalline waters. A rippling breeze usually wimples and dimples its laughing surface, but in calmer moods it reflects, as in a polished mirror, the lofty overhanging mountains, with every stately pine, bounding rivulet, blossoming shrub, waving fern, and—high above all, on the right—the clinging, thread-like line of the snow sheds of the Central Pacific. When the railroad was being constructed, 3,000 people dwelt on its shores; the surrounding forests resounded with the music of axes and saws, and the terrific blasts exploded in the lofty o'ershadowing cliffs filled the canyons with reverberating thunders, and hurled huge bowlders high in the air over the lake's quivering bosom.

In winter it is almost as popular a pleasure resort as during the summer. The jingling of sleigh-bells and the shouts and laughter of skating parties can be heard almost constantly. The lake forms the grandest skating park on the Pacific coast.

Yet this same Donner lake was the scene of one of the most thrilling, heart-rending tragedies ever recorded in California history. Interwoven with the very name of the lake are memories of a tale of destitution, loneliness and despair which borders on the incredible. It is a tale that has been repeated in many a miner's cabin, by many a hunter's camp fire, and in many a frontiersman's home, and everywhere it has been listened to with bated breath.

VIEW OF DONNER LAKE, NEVADA COUNTY

Our mountain lakes are well described in the following paragraph by Prof. John Le Conte:

Hundreds of little Alpine lakes, with their clear, deep, cold, emerald waters, are embosomed among the crags of the Sierra Nevada mountains. Their origin may be traced to the more powerful actions of glacial agencies in past times; in some cases, gorges dammed up by ancient moraines. The streams that now supply these "Gems of the Sierra" are born in the cold, gloomy solitudes of the upper mountain region, amid perpetual snow banks. Many of these charming lakes are nestled in the least-explored portions of the "High Sierra," and have not been mapped or described; nay, some of them have as yet no designating names. They are the reservoirs of melting snows, and some of them—as those near the headwaters of the Yuba—are the sources of summer supply for hundreds of miles of mining ditches. Hence, the existing condition of our topographical knowledge of these wild and imperfectly explored mountain fastnesses renders it impossible to furnish anything like a complete catalogue of the mountain lakes of the Sierra Nevada.

Mountain Lakes of the Sierra Nevada.

NAME	Max. length in miles.	Max. width in miles.	Approx. area in square miles.	Hight of surface sea level above the in feet.	Max. depth in Feet.	Hight of bottom above sea level in feet.
Gold	4	2	.....	.....	.....	.....
Truckee	3	1	.....	6,904	90	6,814
Eureka	.....	.....	.....	.....	65	.....
Meadow	2	½	.....	.....	180	.....
Donner	2½	¾	.....	5,964	.....	.....
Washoe	3½	2½	.....	5,605	.....	.....
Tahoe	21½	12	192	6,247	1,645	4,602
Tenaya	1	½	.....	.....	.....	.....

The foregoing table embraces some of the conspicuous lakes embosomed among the crags of that portion of the Sierra Nevada extending from Lassen's peak (lat. 40° 30′) in the north, to Mt. Brewer (lat. 36° 30′) in the south. With the exception of Tahoe, most of them are comparatively small.

These Alpine lakes, with their clear, fresh, snow-fed waters, surrounded by lofty snow-clad peaks, whose slopes are covered with magnificent groves of pine and fir, constitute the most attractive feature in the lesser summit valleys of the Sierra Nevada. The charmingly picturesque character which they impart to the wild and rugged scenery of these mountains has not been overlooked by tourists, poets and artists. But the inaccessibility of most of these "emerald gems" has prevented them from receiving that notice which their exquisite beauties deserve. As civilization penetrates into these mountain retreats, they will become more accessible, and consequently better appreciated by cultivated visitors. The most extensive, as well as the most celebrated, of these bodies of fresh water is Lake Tahoe.

Trips for Pleasure in California.

California is so much of a pleasure resort, as a whole, it is difficult to point out any part of it not worthy of a visit. Still more difficult is it to select that portion pre-eminent over all others for beauty of scenery, salubrity of climate and general attractiveness; and in another column we have arranged a list of the more prominent places, by consulting which the tourist may select which suits him best.

The dimensions of California preclude the possibility of a trip which will include the whole scope of the State. But, as there is no finer country in the world for summer excursions and camping out than this, a jaunt over a portion of it will suffice for most persons. One can, moreover, choose the kind of scenery he prefers, and, to a great extent, the climate also. The moist, cool atmosphere of the coast, the warmer and drier air of the mountains, or the heat of the valley, present a variety difficult to find elsewhere in the same area. In summer we do not need, in our excursions, to count on rainy days. It never rains here during what is known as the "dry season." One can sleep in the open air or in tents for six or seven months in the year without inconvenience. We have before given a general sketch of the more frequented routes of travel, and repeat here much previously said.

Tourists are somewhat apt to think that after they have seen Yosemite, Lake Tahoe, the Geysers, the Big Trees and a few more of the "sights" of the State, they have seen it all. But there are many beautiful spots in California which lie off the route of travel, which are worthy of a visit. The number of "springs," and other health resorts, has increased greatly of late; and there are now numerous camping grounds, where those who prefer camping out to hotel life will find all the necessary conveniences.

Going south from San Francisco on the peninsula there is a pleasant road from San Mateo over the hills, by Crystal Springs to Spanishtown and Purissima creek, noted for the finest trout in the State, as they are perfectly pure, the creek falling over the cliffs into the ocean. Further on is San Gregorio creek, with its lagoon famous for fishing. There is a hotel here. Then we come to Pescadero, a coast town much frequented in summer and noted for its "pebble beach." The Pescadero and Butano creeks, near by, afford fine sport for the angler. Beyond that is Scott's valley, and then Santa Cruz, the well-known watering place. Between Purissima and Santa Cruz there are numerous creeks other than those mentioned, with plenty of fine hunting and fishing. Camping grounds will be found all along at many points.

Another trip, starting from the city, is to go by the railroad by way of San Mateo, Redwood City, Menlo Park, etc., to Santa Clara and San Jose, the beautiful towns in the Santa Clara valley. From the first, one may branch off to the foothills of the Santa Cruz mountains, where he will find Blackberry farm, Congress Springs and Los Gatos. From San Jose one may go to the famous Almaden quicksilver mines, and in the opposite direction, a beautiful ride is out to Alum rock, on Penitencia creek, and from there up to the summit of Mt. Hamilton, where the Lick observatory is being built. From San Jose, the S. P. R. R. carries its passengers down the valley past Gilmore (from where one may go to the Gilroy Hot Springs), through the San Juan pass into the Pajaro valley, and across to the noted watering-place of Monterey, where the railroad company has erected a magnificent hotel. There is the beautiful bay of Monterey, with its splendid beach running around from Monterey to Santa Cruz. At various points on the line of the beach are hotels, camping grounds, and various accommodations for tourists and campers. Aptos and Soquel are the most prominent points.

Back of Santa Cruz the range of mountains of that name offers a splendid opportunity for camping, fishing and hunting, and there are numerous public resorts and springs, such as Magnetic springs, Wright's and others. The climate in the vicinity in summer is beautiful, and the mountains usually filled with campers.

Following on down the coast, we strike back through the Salina valley to Soledad, and from here may visit the Paraiso springs, seven miles distant. Then continuing on down the valley again we meet the plateau on which is Paso Robles springs, a noted health resort. Then further on we arrive at San Luis Obispo, an old Spanish town surrounded by grain fields and sheep and cattle ranges. Between there and Santa Barbara these ranges prevail. Santa Barbara is on the coast and is usually reached by steamer and not by the route we have mentioned, which is the way one would have to go by wagon.

To see the coast and its towns below Monterey, the best way to do is to take one of the Pacific Coast Steamship Co.'s steamers and go as far as San Diego and back. In this way Santa Barbara may be visited conveniently. You can also stop at Los Angeles, and by lying over a trip, visit Santa Monica, the orange groves of Los Angeles, and vineyards of Anaheim.

Back from the coast is the charming city of Los Angeles, with its lovely environment. Beyond is San Gabriel valley, with the famous Sierra Madre Villa, popular far and near. By rail eastward one reaches the valley of the Santa Ana, and sees Riverside, a horticultural jewel, with the Glenwood cottages in the midst of orange groves. Beyond is the beautiful San Bernardino valley with the lovely Crafton retreat at its head, the Arrowhead springs, with their medicinal waters and enchanting traditions, and Waterman's hot springs, which have wide fame, but are not now open except for transient visitation.

Returning to the coast one may take the steamer and see San Diego with its magnificent harbor and splendid climate. Returning, as the steamer comes up it passes through the Santa Barbara channel, between the islands and mainland, and coasting along up, finally enters the historic portal of California—the widely famed Golden Gate.

Starting again from San Francisco, as a center, going north along the coast we visit Sausalito and San Rafael, and back of them Mt. Tamalpais, and borne by the North Pacific coast narrow-gauge road, wo pass through a beautiful country, up along the shores of Tomales bay, passing on the way Paper-mill creek, Taylorsville, and many beautiful camping spots; then on through the redwood timber to Duncan's mills and the Russian river, famous for its beautiful scenery.

Then again by a route ending at the same place, one may go to the S. F. & N. P. R. R. to Donahue, Petaluma, Santa Rosa (where you leave for Mark West springs), to Healdsburg, on the Russian river. From here Litton springs, Skaggs' springs, the world-famous Geysers, etc., may be visited.

A beautiful trip is up through the fine vineyards of the Napa valley, where are hosts of summer resorts. In this county many pleasant summering places are established in the neighborhood of Napa City, St. Helena, Calistoga, Kellogg, and other places. Among the well-known resorts are the Napa Soda Springs, Litton Springs, Nook farm, Sulphur springs at Calistoga, Etna Springs, near Pope valley; Sulphur Springs ranch, near Knoxville, and Petrified Forest.

Entering Lake county from the west, the Highland Springs is the first resort reached by stage from the railroad station at Cloverdale. From Ukiah to Lakeport by stage, the Blue lakes and the Pierson Springs are approached. Entering the county from the south, by stage from Calistoga, the traveler passes Mt. St. Helena, and can take a magnificent view from the summit by tarrying at the Mt. Toll House, and take a short horse-back ride. Anderson Springs, Harbin Springs, Glenbrook, Adams' Springs, Siegler Springs, Howard Springs, Soda Bay, on Clear lake; Sulphur Banks and Borax lake, Mound cottage, Bartlett Springs are among the notable attractions of Lake county. Lake county seems admirably and wonderfully adapted for a universal tourists' field, and is some day destined to attain a world-wide reputation.

Shasta county, from the well-watered bottom lands of the upper Sacramento valley up to the refreshing Strawberry valley, at the base of Mt Shasta, some 70 miles or more, is a pathway full of joy to the hardy tourists who delight in rugged walks of nature. The United States fish-hatching establishment on McCloud river and Soda springs, clear fishing brooks and rivers, good fishing, etc., are here met with.

In Contra Costa county, the view from the summit of Mt. Diablo, on a clear day, is grand and wonderful in the number of cities and towns embraced in the vast extent of populated territory brought within the scope of the tourist's vision. A Byron, in this county, are hot sulphur springs which are lately becoming quite noted. The Piedmont springs in Alameda county, back of Oakland; the bay baths at Alameda; the sulphur springs in Colusa county; the White Sulphur springs near Vallejo, in Solano county; Webber lake, Donner lake, and hosts of other attractions, might be mentioned.

In Calaveras county, six miles from Knight's Ferry (Stanislaus county), are the Lane springs.

A warm and remarkably dry climate is found, early and late in the season, on the western borders of the Sacramento and San Joaquin valleys, which is remarkable for its sanitary qualities, which seem specially kindly and favorable in many localities to sufferers from pulmonary afflictions.

The whole range of the Sierras, which extends the length of the State, abounds in magnificent scenery. It would take more than a page of our space simply to mention the points of interest. At different points in the range and the foothills, hydraulic and quartz mining are carried on extensively, and those who have never seen the former should visit at least one gravel mine while in California.

It is, of course, impossible, in a brief article, to enumerate all the pleasure and health resorts of California, or all the thousand and one places where people go to amuse themselves in the summer months. We shall, in future issues of this journal, take occasion to mention other than those spoken of here. Every little canyon and glen, every mountain valley, every nook has its picturesque points, known to a chosen few. Here and there are places more widely famed. The vineyard regions of one section, the orange orchards of another, the wheat fields of another, possess charms to allure people of different temperaments. Others, again, prefer the solitudes of the hills, where the unbroken forests reign supreme, where they can retire for a time from the busier scenes of life.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

In consideration of the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and hand some," and first class in all respects—to the benefit o both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1,25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞ For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, - - June 15, 1882.

SELF DESTRUCTION.—Says the Canadian *Workman:* "In addition to the forfeiture clause to be signed in all future examination papers by new applicants in case of suicide, the Grand Lodge should at once pass a law to make self destruction a bar to any payment whatever to any member of the Order, no matter when he joined." Not so fast, Bro. *Workman*; recollect what you say in the same breath, almost: "The A. O. U. W. has a lofty mission—to disperse the gloom and bring gladness and plenty to homes that have just been darkened by the shadow of the angel of death, which might have become the abodes of misery, desolation and want." Recollect, that "under that mystic roof which veils the future, present and the past, there is no man knoweth what a day may bring forth." The sun may rise bright, joyful and glorious, yet, ere the day is past, be overcast with clouds and set in the black gloom of the evening time. When the Angel of Death closes the doors of this life upon us and gives the keys into the hands of the Angel of Resurrection, who shall say it was unjust? Is the heart-broken mother to blame, or the weeping wife, or the sorrowing friends? It may belong to us to say: "No despairing mortal shall join our ranks—no imperfect man"—but say not: "He was unjustly called."

NO BEER ON THE GROUNDS.—At the recent celebration and anniversary picnic at Oakdale, Stanislaus county, an enterprising individual came on to the grounds with an express wagon loaded with lager beer. Selecting a shady place, easy of access, he opened his batteries and invited the brethren to join him. A hasty consultation was had, and, as a result, the stalwarts loaded his beer in his wagon quicker than he had unloaded it, and helped him more forcibly than polite, into his wagon, and suggested to him that reformations should never move backward, and that he *must* move forward and off the grounds. The discomfited merchant, in giving his parting salutation, was more forcible in manner, and in a higher key than the Orator of the Day, Bro. J. W. Watson, Assistant Grand Recorder.

THE picnic season is partly over and the Workmen may retire on their well-merited reputation of having had the greatest success in this line imaginable. It now remains to be seen how they will distinguish themselves in barbecues and 4th of July celebrations. Certainly, there never was an organization so cosmopolitan and yet so aristocratic in its composition; so plain and yet so powerful; so humble and yet so proud.

THERE are in this State about 15,000 Workmen.

The Duty Toward the Widow.

The payment of the $2,000, guaranteed by the beneficiary certificate, to the widow of a deceased brother, should by no means be considered as closing the duty of the Lodge. One of the watchwords of the Order is "Protection," and the widows and orphans need a further protection than the mere payment of certain dollars and cents.

In eight cases out of ten the widow does not know how to invest the money after she gets it. To whom could she more properly look for guidance and advice than to, the Lodge which pays her the money. An Advisory Committee of the Lodge could not, of course, exercise any direct jurisdiction over the money after it is paid to the legatee, but it could advise with the widow and assist by its advice.

Designing men will take advantage of any means of obtaining money, even if their victims are widows and orphans. In fact, the generally helpless condition of a suddenly bereaved family, the lack of business knowledge, and the worldly inexperience of such persons, makes them a ready prey to the wolf in sheep's clothing who may come in the path. In another column we record the evil deeds of a scoundrel, who robbed a widow of her small means in a most despicable way. Such circumstances are liable to happen again in other places, and it behooves the members of our Order everywhere to lend a hand to put a stop to such practices.

When a brother dies and it is publicly announced that he was a member of the A. O. U. W., it is known, also, that the widow will shortly receive the $2,000. The brother may belong to other societies, as well. The exact sum she is to receive is therefore known. Very few women ever have the handling of such sums of money, and the unwonted experience to a certain extent naturally embarrasses them. They of course recognize the necessity of investing it in the best way, and their friends are consulted. At such times those supposed to be friends are not always such; and if the Lodge would interest itself practically in the matter, much good would result.

Of course it is not possible to absolutely dictate the course to pursue. But there can be no possible reason why a committee should not visit the widow and ask her intentions concerning the money. Ask her if she has made up her mind as to her investment. If it is considered hazardous, she should be so told, and the reasons for the conclusion expressed. In short, she should be advised with plainly about the matter. In some Lodges these things receive proper attention, while in others they do not, and the object of this article is to call the attention of members everywhere to the subject.

WE extend congratulations to the brethren of San Jose at the unqualified success of their recent excursion and picnic to Del Monte park. It is conceded to be one of the best ever held in the State, and, as results show, far ahead of any excursion of the A. O. U. W. since its organization on the Pacific coast. It was in every respect a very enjoyable affair, and the net profit amounts to $815.

WM. H. JORDAN, Grand Representative, on his way East, stopped over at Tucson, where he made a public address "On the Needs and Aims of Workmen." From information received, it was regarded as one of much merit and delivered in that earnest and interesting manner which is characteristic of Bro. Jordan. The next day he was escorted around to the places of interest and to the ancient church, San Zavier Del Bac.

DAWN OF HOPE, D. of H., at West Oakland, have surrendered their charter.

THE CUE AND BAKER NUPTIALS.—Wednesday eve, May 24th, Wm. G. Cue and Miss Josie V. Baker were married, at the residence of the bride's parents, 1504 Howard street, the Rev. M. L. Githens officiating. The groom is one of the Deputy Superintendents of Streets, and is well and favorably known in political circles, while the bride is the daughter of Chas. E. Baker, a prominent member of the A. O. U. W., Knights of Pythias, Knights of Honor, B. P. O. Elks, I. O. O. F. and other secret organizations. The bride was attended by Misses Eva Baker and Carrie Bird, and the groom by Messrs. J. W. McAdoo and Thos. Kemble. The parlors were prettily decorated with flowers and evergreens, and on a large table were displayed the numerous and costly tributes of affection for the happy pair from a multitude of well-wishers.

Provisional Grand Lodge in Iowa.

The following explains itself:

OFFICE GRAND MASTER WORKMAN, A. O. U. W., CEDAR FALLS, IOWA.

By authority of the laws of the Order, the Supreme Master Workman, A. O. U. W., did, on March 1, 1882, suspend the charter of the Grand Lodge, A. O. U. W., of Iowa, thus rendering its acts null and void thereafter. For the purpose of placing the members of loyal Lodges, A. O. U. W., and the loyal members of "Seceded" Lodges in position to preserve their rights as members of the Order, a provisional Grand Lodge has been formed by appointment of the Supreme M. W., as follows:

W. R. Graham, Deputy Supreme M. W. for District of Iowa; L. O. Howland, Deputy Supreme Recorder for District of Iowa; B. F. Murdock, Deputy Supreme Receiver for District of Iowa, and acting, respectively, Grand Master Workman, Grand Recorder and Grand Receiver of Iowa.

Now, therefore, by the authority in me vested as Deputy Supreme Master Workman, A. O. U. W., of United States for District of Iowa, and acting Grand Master of Iowa, I forbid the forwarding of official reports or remittances of monies under the name of A. O. U. W. to any other person than L. O. Howland, Deputy Supreme Recorder and acting Grand Recorder at Cedar Falls, Iowa. Further, I warn all bodies heretofore and now working under a charter issued by authority of the Supreme Lodge, A. O. U. W., that they will be held responsible for all acts performed since March 1, 1882. Seven or more loyal members of any Lodge will be recognized as the Lodge proper, (and as such should report immediately,) and are authorized to elect officers and take possession of the charter and all books, monies and properties of said Lodge. Given under my hand this 10th day of April, A. D., 1882.

W. R. GRAHAM,
Dep. S. M. W. and Acting G. M. W. of Iowa.

THE SUPREME RECORDER'S REPORT.—The statement of the Supreme Recorder, for the month of May, is at hand. From this, it is seen that the amount of general fund received for the month is $3,965.20; disbursed, $3,144.71. For the year, receipts to June 1st, $12,456.09; disbursements, $12,456.09. Relief fund, for the month, receipts $7,282; disbursements, $7,700. Beneficiary fund, receipts $23,934.00; disbursements, $24,000. Total membership, 107,177. The statement also has appended a "special notice" to the effect that the Digest of the Laws and Decisions is now ready, price $1.00. Address your Grand Recorder or Supreme Recorder.

THE IRON HALL.—This is an organization or secret Order providing for a seven years' endowment fund of from $200 to $1,000, according to a graduated assessment plan. It also provides for the payment of sick benefits, and in other respects is very similar to other secret Orders. It is based upon the theory of increased membership, compound interest and suspensions, and is similar in this respect to the building and loan associations. "The Iron Hall" is the title of a sheet published at Indianapolis, Ind., in the interest of this institution. It appears to be a worthy organization, being an excellent savings institution for those of small means.

DISTRICT No. 4, composed of Myrtle Lodge No. 42, Bernal No. 19, Yerba Buena No. 14, and Noe Valley No. 185, will hold a meeting on Saturday, June 17th, at the hall of Myrtle No. 42, and judging from the fraternal spirit that animates the Brothers of that District, their fun-loving propensities, and their ability to get up a good time when they set about it, we predict a right royal good time and a treat that no Brother of the Order in the city should miss if he can possibly attend. Success to District No. 4. "May their Tribe never grow less."

VIOLIN RECITAL.—At a recent violin recital at B'nai B'rith hall, by the pupils of Prof. Henry Hyman, Master Maurice Lipman, aged ten years, and Henri Lipman, aged eight years, took the audience completely by surprise in their efforts in playing on the violin in a duet. The storm of applause that greeted them at the close was a heartfelt ovation. These young artists and prodigies are the sons of M. Lipman, Financier of Triumph Lodge.

PICNICS are the order of the day in California among the various Lodges. The brethren seem to go into the fraternal feature of the Order with more zeal than they do in the East. Lodge meetings, as a rule, are better attended, and the rapid increase is no doubt due to the fact that they have more earnest and consistent workers in the field at all times.—*Fraternal Censor.*

Grand Recorder's Statement for February.

We condense from Grand Recorder Pratt's Financial Statement for February the following leading figures:

WARRANTS ISSUED.

No. 442, Expense, John D. Arcy	$ 75.00
444, Supplies, R. Schaezlein	63.50

FIDELITY LODGE, No. 3, A. O. U. W.—J. W. Kinsley, Deputy Grand Master Workman, for the territory comprising Utah, Nevada, Idaho and Montana, June 1st, in pursuance with a legal petition, organized Fidelity Lodge, No. 3, of the Ancient Order of United Workmen, in Ogden. The following charter list was accepted. Philip H. Emerson, Justice Supreme Court; Captain Ransford Smith, attorney; Major L. B. Stevens, Court Bailiff; Percival J. Barratt, attorney; J. D Carnahan, physician; J. M. Edwards, agent Pacific Express Co; H. D. King, express messenger; Adolph Schansenbach, clerk; George F. Brown, cashier Central Pacific railroad office; John H. Dennis, of the *Pilot*; Julius Kiesel, baker; Frank Cook, printer; Francis Houston, locomotive engineer; A. J. Pattison, manager telegraph company; A. C. Emerson, clerk of the United States District Court. The Lodge was named "Fidelity," in honor of Fidelity Lodge, No. 136 of San Francisco, one of the largest and best Lodges in that city, The following officers were elected and installed: Past Master Workman, Judge P. H. Emerson; Master Workman, Major L. B. Stevens; Foreman, P. J. Barratt; Overseer, Adolph Schansenbach; Recorder, Frank Cook; Financier, J. D. Carnahan; Receiver, A. J. Pattison; Inside Watchman, John H. Dennis; Outside Watchman, Francis Houston; Medical Examiner, Dr. J. D. Carnahan. The Lodge voted to allow applicants to be received for one month at the minimum constitutional fee, $15. The next meeting will probably be held early next week. The instituting officer was assisted by Past Master Workman, A. M. Grant, of Park City, and other visitors.—*Ogden Daily Pilot.*

FRANK W. ROSSBACH, P. M. W. of Olympic, who is one of the active workers, had born unto his house the first heir, a daughter, on Saturday, the 27th of May.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

Wm. C. Flint, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

Again we are approaching the closing of another term. Soon you will be required to elect officers, whose duty it will be to guide the fraternal ship for another six months' cruise. As your officers in the past have been faithful in the performance of their duties, you will allow us again to remind you it is of the greatest importance that the best and most tried material should be selected. And, as far as possible, re-elect your faithful Recorders, Financiers and Receivers, as the prosperity of the Lodge depends largely upon their united efforts. By doing this your Lodge will run smoothly and we will rejoice and be happy.

Two copies of a new form of S. A. report will be sent to each Lodge, both to be carefully filled out—one to be retained in the Lodge, the other to be sent to the Grand Recorder immediately after the installation of the officers. At the night of installation the D. D. G. M. will examine the report, as to its correctness, and return the same to the Recorder, who will forward it to this office.

The per capita tax for this year is 60 cents per member, payable in two installments, semi-annually, of 30 cents each. The levy will be made on all members, both Junior Workmen, Master Workmen and members suspended for a less time than six months.

Few ideas to be remembered. Before writing to this office for information in regard to questions of law and order, please read up the constitution and law covering those points. This is an old motto, but a good one, "What is worth doing, should be done well." Have all proper names plainly written, especially the "Legatee," as that name appears only once in an application for a beneficiary certificate, and then give the relation of the legatee to the applicant.

A final card is used by a brother for the purpose of severing his entire connection with the Order. A clearance card is to be used when a brother wishes his membership transferred to another Lodge.

It may appear to some that these frequent hints in relation to cards are of no avail. A few days ago a report came informing us, under seal, that Bro. —— had withdrawn from the Order by taking a final card. The next day we receive from another Lodge a report informing us the same Bro. —— had deposited his card in their Lodge.

We are glad to be able to say that peace and prosperity prevail, as far as we can learn, throughout the entire jurisdiction, and a manifest desire that none but those who are sound in health and morals shall enter into our fold.

By the 12th of each month this office should be in possession of all the monthly reports coming from our subordinate Lodges, not alone for the purpose of knowing the standing of our Brothers, but we are required by law to forward to the Supreme Lodge, on or about the middle of each month, a statement showing the number of Master Workmen in good standing on the 1st of each month. In May there were 47 Lodges delinquent with their reports, hence we had to approximate them.

There were written in the month of May 170 beneficiary certificates, making in all 16,875 that have been issued from this office since August 21, 1875 to June 1, 1882.

This amount of 16,875 is segregated as follows:

The number of Brothers who have died are	280
The number who have taken only the J. W. D. are.	250
Those who have been suspended from the Order, expelled or joined other jurisdictions are	1,096
Those who are temporarily suspended are	649
Master Workmen in good standing	14,600
Total	16,875

Thus, we see the Order is resting on a solid foundation with 14,600 M. W. to carry on the good work.

The Supreme Recorder's report for the 1st of June shows the membership of Iowa to be $2,000 M. W. in good standing. This certainly indicates that not all of the 10,000 who were suspended for non-compliance with the law were disloyal, but 2,000 good and true men have, like the "mythical bird," risen from the ruins, and to-day stand as a living monument in the defense of our noble Order.

The Pacific States Watchman is a paper that should be read by every Brother Workman in California, and receive a hearty endorsement. Not alone for the interesting news it gives, or its able and finely written editorials, but for its true worth. It is the Workman's paper and friend, and as such is laboring with noble purposes for the advancement of the best interests of the Order regardless of labor or expense.

The Ashler Entertainment.

We take from the Alameda *Argus* the following account of the recent entertainment:

On Saturday, June 3d, this famous Lodge of jolly Workmen gave to their friends in Alameda their second floral reception. To say 'twas beautiful is to inadequately convey the meaning of all 'twas. The Committee of Arrangements, consisting of E. T. Barnes, R. Frank Clark, F. A. Harnden, J. E. Baker and A. S. Cheminant, left not a stone unturned, and spared neither time nor expense to make it the most beautiful and tasteful floral display ever exhibited in Alameda. Upon entering the outer door every lady was presented with a choice bouquet, constructed of rare, fragrant and delicate flowers; and the gentlemen were made likewise the recipients of beautiful little boutonnieres, when they were introduced into the auditorium, and upon a scene of the most surpassing loveliness, by gentlemanly ushers. Across the head of the richly upholstered hall were pendant from invisible wires the salutation, "Ashler bids a happy welcome to you all," in large letters of white roses, pinks, maiden hair and arbor vitæ. Baskets of gorgeous flowers rested upon stands (which in their turn were trimmed with smilax, ivy and honeysuckle) set each side of, while foxglove, lilies and Lady Banksia roses, decorated the hangings above the Master Workman's chair. Vines and flowers of brilliant hue were lavishly attached to the chandeliers; while a huge floral bell hung from the center of the hall, from which shot out the long bouquet-laden festoons of cypress to the four corners of the room, and down the corners to the floor. Completely encircling the hall were like festoons, gathered up every six or eight feet. The side and back canopies were framed in white and pink roses, as best suited the color of the upholstery, and upon the surface of which, in a semi-circle, were fastened in lovely buds and incipient blossoms the words "Charity, Hope, Protection;" over their respective emblems in solid roses—a heart, anchor and shield. Great ferns, gathered especially for the occasion from Laundry Farm by two enterprising members of the committee, were attached to the side of the windows and doorways, rendering the scene at once picturesque and foresty. The programmes usual on this occasion were in harmonious keeping with the character of the reception, beautiful in color and unique in design, flowers, frogs; water lilies, sprites and glassy ponds predominating as subjects, while the pretty couplet,

"Dear as the smile on an old friend's face,
Is the smile of the bright, bright flowers,"

Met the eye on the index page. We append the programme, rendered entirely by members of the Lodge, their wives, daughters and sons:

"Welcome," Master Workman Hand.

PART I.

Quartette, "Fairy Moonlight," Root, "The Ashler '8;'" vocal solo, "I'm a Merry Zingara," Balfe, Mrs. H. W. A. Nahl; cornet solo, with piano accompaniment, "Ye Pretty Birds," Gumbert, Messrs. Poindexter and Winant; vocal solo, "The Village Blacksmith," Weiss, Mr. W. D. Littleton; recitation, "Medley," Mrs. A. F. Craven, closing with original rhyming puns upon members of the Lodge; trio, "A Little Farm well Tilled," Parry, Messrs. R. Frank Clark, E. T. Barnes and W. D. Littleton.

PART II.

Duet (flute and piano), "Terschak's 2d Polka Caprice," Mr. R. Gibbons and Miss Alice Gibbons; Trio, "Flower Greeting"—Cushman—Mrs. J. G. Ward and Messrs. F. A. Harnden and J. E. Baker; Recitation, "The Birds of Killingworth"—Longfellow—Mrs. G. L. Birkmaier; Piano solo, "Thy Sentinel am I"—Watson—Mr. J. E. Baker; Character sketches in Ashler, by Mr. H. W. A. Nahl—illustrated with panoramic pictures of members of the Lodge, not forgetting the "four curled darlings"—with lecture by Professor Bogle, of San Rafael, near San Quentin; Quartette, "The Lost Ship"—White—"The Ashler '8.'"

The grand feature of the above programme undoubtedly was Prof. Bogle's (Harry Wheaton's) lecture upon the "sketches," as they were unroiled by two Ashlers—general utility men—which kept the audience in a protracted roar. The sketches themselves were life-like pictures of many of the members, localized so that their friends would recognize them and it in a humorous or ridiculous way. Our accomplished friend and fellow townsman (who is a shining light in the Lodge), N. A. W. Nahl, executed the sketches. If the happy, bright and cheerful faces of the audience is a safe gauge of their pleasure in the Ashler reception, with its accompanying entertainment, then should the committee feel satisfied in the result of their labor of love. We shall remember this floral feast with unqualified delight, and do not hesitate to say that the members, one and all, of Ashler Lodge feel justly proud of it.

An Outrageous Confidence Game.

That the remarks we make in another column with reference to the duties of Lodges in looking after the financial affairs of deceased brethren are worthy of attention, is shown by the following account, which we take from the Sacramento *Record-Union*:

Mrs. Eliza Berry recently had a very strong confidence game played upon her, and but for the timely interposition of a brother-in-law, would have lost some $2,000. The facts are as follows: On the 13th of May an advertisement appeared in a San Francisco paper, stating that a lady was wanted to take care of orphan children and to do light housework. This came to the attention of Mrs. Berry, whose husband committed suicide at Joe Goddard's saloon, on K. street, in this city, about the 1st of last February. He will be remembered as the proprietor of what was known as the "Baby Racket" on K. street, between fourth and fifth. His wife was the possessor of about $2,000, which had been paid her by the Ancient Order of United Workmen of this city, as an insurance upon her husband's life. She answered the advertisement, and about two weeks ago she received a letter from Lincoln, from one R. M. Saunders, stating that the writer was the party advertising, and that he would soon be returning to his home in San Francisco, and would call on her here. Saunders has several aliases, and has resided here, and also at Yountville, Lincoln and San Francisco. Before calling, Saunders made inquiries of the antecedents of the lady, and learned that she was possessed of the money above mentioned, and set himself about to possess it. He called upon Mrs. Berry, represented to her that he was a bookbinder, with a place of business on Sansome street, San Francisco; that he was a widower with two children, and owned a city residence, also a ranch near Haywards. She engaged, on promise of $30 per month, to take charge of the country place. He assured her that he had a German gardener and a woman to do the cooking, and that she would only be required to keep house. On these representations the lady broke up housekeeping here and went to San Francisco with Saunders. Last Wednesday, Saunders claimed to be temporarily short of money, and asked the lady for a loan of $300. When the newly-engaged housekeeper stated that the money was in a bank in this city, Saunders offered to go for it, and prevailed on her to give him an order for $2,100. The swindler procured the money and sent it, for some unknown reason, per Wells, Fargo & Co., to San Francisco, in the name of Charles Holman, returning to that city himself the same day. Upon going into the express office here to transmit the coin, he unexpectedly met a person whom he had known at Yountville. This disconcerted him considerably; so much so that his hand trembled violently while counting the money. This agitation was doubtless caused from a fear that this person, seeing him so flush of funds, might be led to inquire of his manner of becoming possessed of them. While at the express office here he sent some small sums to parties at Lincoln, which it is supposed he owed. He also inquired if he would have any difficulty in getting the money from the express office at San Francisco. Instead of calling on his victim on his return, he obtained the coin from the express office and deposited $1,600 with the clerk of the Russ house and $100 with the saloon-keeper there, under the name of Holman. On Thursday the lady met him on the street and asked him for money. He told her he had drawn it from the express office. Later in the day she visited her brother-in-law, who, after hearing the circumstances, concluded that his relative had been swindled, and informed Captain Lees of the affair. Lees, with detective John Coffee, soon found Saunders' trail and located the money he had deposited, and at two o'clock one morning captured the swindler in a saloon on Montgomery street and placed him in the city prison, charged with embezzlement. They recovered $1,760 deposited at the Russ house, which, with $56.50 found on his person, made $1,816.50 recovered. The confidence operator is of prepossessing appearance, 42 years of age, and claims to have two children. Saunders' aliases are Miller, Gaffield, S. P. Danforth and Charles Holman. He is the son of a deceased newspaper correspondent named Miller, who several years ago wrote from Tuolumne county under the *nom de plume* of "Sluice Hog." The prisoner some months ago tried to obtain $300 from a man and wife on promise of giving them situations in Mendocino county.

G. F. J.—In reply to several queries on this subject, I would say that it is not proper or legal to ballot upon an application for the M. W. degree until the applicant has received the J. W. degree. A person must be a Junior Workman before he can apply for the M. W. degree. See Art. V., Sec. 2, Constitution of Subordinates.—W. H. Barnes, G. M. W.

From the report of the Supreme Recorder, we find there are now over 107,000 Master Workmen in good standing in the United States.

Fraternal Visit.

On Wednesday evening, May 31st, a good delegation from Fidelity, No. 136, paid a fraternal visit to Friendship, No. 179. A short time was had in sociality and mutual congratulations, after which speech-making and exchanging views connected with the welfare of Workmen was the order. Dr. Jewell, M. W., in his happy manner, welcomed his guests and introduced J. W. Belden, M. W., and F. M. Farless, P. M. W., who, in turn, made short speeches, which were well received. Prof. H. C. Seil, in his pleasing and artistic manner, presided at the piano, and rendered several instrumental pieces. F. M. Symmes, P. M. W., who was invited to entertain the Lodge, read a humorous piece in a felicitous manner. Bros. Roach and Reading, Sec'y of Guarantee Fund, were quite entertaining in short speeches. Bro. J. F. Curtis, C. F. Curtis and C. E. Brindsmade each had a few congratulatory words, after which Bro. Geisting, of Fidelity, and Bro. Swan, of Friendship, sang in an admirable manner "Larboard Watch." Bro. Swan, the new member of Friendship, sang a fine song, after which E. F. Land, Deputy Grand Master, made some timely remarks in relation to the meeting of the Supreme Lodge in 1883. Dr. Jewell has had a large experience as the chief executive officer in older fraternal societies and our young subordinate was fortunate in electing him as their Master Workman. The skill and tact exhibited by him in introducing the guests on this evening aided much in making the meeting so interesting. We hope these fraternal visits will be kept up.

Railroad Mutual Benefit Association.—At the second regular annual meeting of the Central and Southern Pacific Railroad Mutual Benefit Association, held recently, the total membership was shown to be 295; 62 had joined during the year, and three had died, to the heirs of whom $750 each had been paid. The following Board of Directors was elected: E. B Ryan, President; J. O'B. Gunn, Vice-President; F. S. Douty, J. E. Foulds, E F. Gerald, C. A Grow, Richard Gray, H. R. Judah, G. L. Lansing Secretary. The most gratifying thing in connection with the meeting was the receipt of a letter from C. P. Huntington, under date of New York, May 30th, in which, after urging the members of the association to reach out for a high moral and intellectual standard, he says: "I much approve of your association, and think you ought to have a good library, with good rooms, where it would be both pleasant and profitable for you to meet, and for that purpose I would contribute $5,000, and have no doubt my associates would do as much. I will send you the money to invest, if such is your pleasure, there; or, what perhaps would be better, I to spend it for books here after receiving a list from you of such ones as you would like; or, I would use my own judgment in selecting a portion of them, if you should desire me to do so. With my best wishes that in this, as in all other undertakings of yourself and associates, your most sanguine hopes will be more than realized," etc. The association returned to Mr. Huntington thanks for his kind expressions and generous offer.

If you would advance the interests of the Order in the most material kind of a way, encourage the distribution of printed matter among the members of your Lodge, as well as among the people at large. The best and cheapest possible way of doing this is to subscribe for the Watchman.

HEALTH AND PLEASURE RESORTS OF MONTEREY BAY.

Monterey and Vicinity.

The Health Resort of the Pacific Coast.

By J. C. H.

The State of California has a world-wide reputation for its healthful and varied climate, its mineral springs and summer resorts, and is now the Mecca of tourists, travelers, invalids and pleasure seekers, who wish to escape the sultry summer heat or chilling winter winds. In almost every portion of the Pacific slope, each locality has its particular claim in point of accessibility, climate or curative mineral springs. Conceding each one that mead of praise that to it justly belongs, it has become a settled fact, that in and around the historic bay of Monterey there are advantages and attractions, natural and artificial, that entitle Monterey to be named the "queen of watering places."

Pacific Grove Retreat.

The Christian Seaside Resort is situated in a beautiful pine grove two and a half miles from Monterey. The founders of this noted seaside rest made provision by contract that no intoxicating liquors should be sold or gambling practiced on these grounds. The Pacific Improvement Co., as their successors, have not only maintained these provisions, but have improved the grounds, built cottages and established a system of protection and sanitary regulations that makes this resort a haven and a home.

The gentle breezes that are wafted through the thickly wooded pine grove are filled with an aroma that makes the visitor involuntarily exclaim "How pure and sweet the air smells."

Special round trip tickets at reduced rates can be obtained at any station on the line of the Central Pacific, Southern Pacific and California Pacific, and especial privileges granted on baggage, tents, and equipage for Pacific Grove Retreat.

The lodging houses have been renovated and refurnished, cottages and tents erected for rent by the week or season at from four dollars to nine dollars and a half per week furnished. There will be a first class restaurant open night and day, and board can be obtained by the day or week. Mr. S. S. Short, widely and favorably known as a caterer and restauranteur, will have charge of this department; as also a butcher shop and provision store.

The stables will be provided with single and double teams and saddle horses for ladies and gentlemen. Coaches run to all trains, making four trips daily from the grove to Monterey, Hotel del Monte and its new bath-house. Mr. J. O. Johnson, Superintendent of Pacific Grove, will have charge of this department.

Religious services will be held every Sunday in the new chapel, and the Chatauqua Literary and Scientific Circle will hold a session, commencing June 27th and closing July 10th. This assembly is designed to bring together persons of literary and scientific tastes scattered throughout the State, and combine opportunities for healthful recreation and mental improvement. This session promises to exceed previous ones, which have been the most noted attraction of the year. An able corps of professors and lecturers has been engaged, and will be provided with scientific apparatus, stereopticon illustrations of ancient and modern art, that will make these lectures pleasing and instructive to all.

The projectors and managers have succeeded in making this peerless seaside resort a place of rest for the weary, a sanitarium for the sick and a home by the side of the sea, where tired nature and overworked and weary minds can rehabilitate and have an air of refinement, morality and religion around them. This new departure has been eminently successful, and lots that were sold at $25 each last year have doubled and trebled in value this year. The little city of canvas will soon be one of neat and substantial cottages, and those who sought retirement and to escape the sultry summer heat, have found that the equable climate of the Pacific Grove Retreat was equally attractive as a winter resort. This seaside resort will be under the management of a Board of Trustees as a prudential committee, consisting of Rev. H. B. Heacock, Chairman, assisted by Rev. Drs. Jewell, Gibson, Stratton and Briggs. R. P. Hammond, Jr., is the general agent.

Santa Cruz.

The place of "one thousand and one" attractions, which is connected by rail at the thriving town of Watsonville, will open her doors and pleasure grounds to receive the multitude that will recuperate and gain health and strength from the fresh breezes of the ocean shore. Tournaments, military encampments, camp meetings, society excursions and private parties to Santa Cruz this season will make this pioneer summer resort the liveliest place west of the Sierra Nevadas. From Santa Cruz south we may see Lake Marina, Camp Alhambra, Soquel, Camp Capitola, Aptos, Camp Goodall—romantic pleasure grounds by the "side of the sea." Through the thriving city of Watsonville, over bayous, across the great Salinas valley and up over the sand dunes, we come to the center of attractions—Del Monte park. Here nature has been most lavish in her gifts, which, united with the art of the landscape gardener and the skill of the architect, has created a miniature world that rivals the most favored resorts of the earth. From an article in the N. Y. *Medical Times*, of January, 1882, written by C. B. Currier, M. D., S. F., we make the following extracts:

Monterey is situated at the extreme southern point of the beautiful bay of the same name, distant from San Francisco only 125 miles by rail, and both for a summer and winter resort I do not know its equal; but in its winter aspect it is simply incomparable. An idea of the evenness of its climate may be had in the following table, prepared by Dr. E. K. Abbott, of the U. S. Signal Service, for the mean temperature of the winter months of 1877-78-79:

Degrees.	Degrees	Degrees.
Dec. 1877, 51.	Jan. 1877, 49.	Feb. 1877, 50.
" 1878, 55.	" 1878, 51.	" 1878, 53.
" 1879, 51.	" 1879, 51.	" 1879, 54.

The following table presents the mean temperature of the two extremes of the year at Monterey, as compared with some other well-known winter resorts:

	Degrees.	Degrees.
Monterey, Cal.	Jan. 52	July, 58
Santa Barbara, Cal.	" 56	" 66
Naples, Italy	" 46	" 76
Mentone, France	" 40	" 73
Jacksonville, Fla.	" 58	" 80
St. Augustine	" 59	" 77

The atmosphere at Monterey is dry and invigorating. The severe winds that make Mentone and other resorts on the Mediterranean coast so disagreeable at certain seasons, are unknown here, and the weather is not so cold in winter, or so warm in summer, as in some parts of California, but there is an equability of temperature not to be found in any other place I know of.

There are occasional foggy mornings in the spring and summer months, as there are in most coast districts, but they are of short duration, and are not disagreeable in their effects upon the most sensitive constitutions; but seem rather to add new life and freshness to the air and to foliage and vegetation.

The rainy season commences in November and lasts until March or April, but the popular impression in the East, that the California rainy season is a constant deluge, is incorrect; for there are more cloudless days during a California winter than can be seen in the course of a whole year in any other part of the United States; and after the most copious rainfall the sun comes out warm and clear, and in a few hours there are no traces left of the storm, save an increase of freshness in the air and the natural surroundings, and in 12 hours after there are no signs of mud in the firm road-beds.

Monterey is replete with natural charms besides that of climate; the scenery about the town is beautifully diversified, and there are many fine views of ocean, bay and mountain.

For those who care for salt-water bathing, there is one of the most noted, fine, white-sand beaches in California, and a new feature introduced here, after the plan of Brighton, England, is salt-water plunge baths, heated by steam pipes.

A point often overlooked or deemed of secondary importance in the selection of a health resort, is the necessity of comfortable and cheerful surroundings for invalids. In many places where climate might be favorable, all other points of comfort being conceded, there is often a sad dearth of the requisite accessories that tend to make life a desirable portion to the average seeker of health.

All this is simply provided for at Monterey. The "Hotel del Monte" is not excelled, if equaled, in regard to magnificence, elegance and comfort, by any seaside hotel in Europe or America.

It is picturesquely situated in a grove of 126 acres, and no pains have been spared to make it one of the most attractive resorts to tourists and invalids in United States, if not in the world.

While I would not attempt to describe Monterey as adapted to the requirements of every class of invalids, still for those who desire a dry, pure atmosphere and even temperature, and a climate of neither extremes of heat or cold, I know of none other, at home or abroad, so deserving af comment.

Hotel del Monte.

Hotel Del Monte is under the management of Mr. George Schoenwald, long and favorably known as a hotel keeper. Around this delightful spot there is an air of rest and contentment among the guests that is seldom seen. The appointments and surroundings are suited to all classes of society. The young and the aged, invalid and tourist, can have comforts and enjoyments in this home-like, luxurious resort, which cultivated and refined people desire. As a veteran traveler observed: "There is more solid comfort to the square inch in Hotel Del Monte than any place I have ever seen."

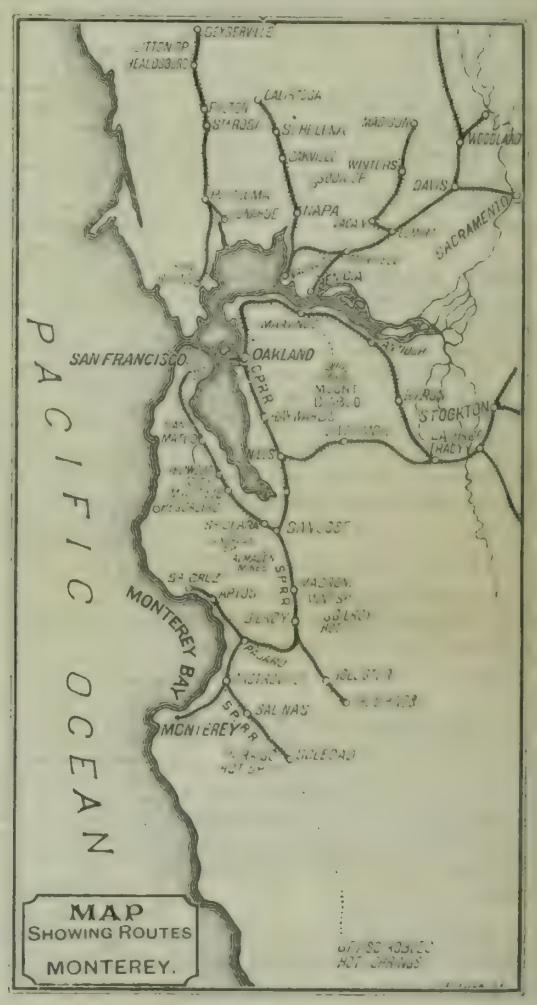
The popularity of this now famous resort is apparent, as it is only two years since its completion, and hundreds from all parts of the United States and Europe have been guests of this hotel; and this year will largely excell any previous season, as over 1,200 from the East have already been registered for the summer months. The excursions on each Sunday from San Francisco ($3 for the round trip) have become so popular that they will be continued until Sept. 1st. Terms are, by the day, $3; by the week, $17.50; by the month, $70.

It is an event in the history of nations that is more strange than fiction, that within one mile from the spot where the apostle of California, Junipero Serra, over a century ago, landed and created a little empire, another generation, race and people have selected the same place—Monterey—"the most charming winter and summer resort in the world," as a rendezvous for rest, health, recuperation and pleasure.

Monterey.

Aside from its historical celebrity, its climate and delightful situation, there are many attractions in the old town, such, for instance, as the Cuartel, on California street, Colton hall, the old block-house and fort, the old custom house, calaboose and commissariat, Catholic church, cemetery, and whaling and fishing points. All of the above-named places are objects of more or less interest, according to the fancy of the beholder. The Catholic church was built in 1794, or nearly 100 years ago, and is constructed of fine white stone; the altar is the work of an Italian, and is regarded as a fine piece of art; there are, also, life-sized paintings of the Saints, and there are other paintings of great age and beauty. A little more than half a mile from town is what is known as Whaling Point, and a quarter of a mile further is the Chinese fishery. Adjacent is the spot where the vessel which took Napoleon Bonaparte from off the Island of Elba was wrecked; a portion of the wreck may still be seen at low tide

San Carlos (or Carmel) Mission.



At a distance of about four miles from Monterey are the ruins of the San Carlos (or Carmel) Mission. This mission, one of the four established towards the end of the 18th century in upper California by Father Junipero Serra and his coadjutors in the work of civilization, was founded on the 3d of June, 1770. Among the edifices erected in upper California by the missionary fathers, that of San Carlos was one of the best in style and material. There were good ideas of architectural form in the head that planned this solid building. The two great towers gave an air of dignity to the vast construction, and one sees, now that ruin has overtaken them, what it cannot be merely fanciful to suppose was intentional with the designer, that there is a prevailing slope of the walls of the main building from the ground to the roof, so that the general form of the church, seen *vol d'oiseau*, recalls that of a mound, the very shape the Syrian Mount Carmel. It is a noble building, standing in a landscape full of enchanting beauties.

In the churchyard of the mission lie remains of 15 Governors of this Province and the tomb of the apostle of California, Junipero Serra, who died in 1784, still zealous in his great work. The lands surrounding the Carmel Mission were fertilized by a perennial stream of pure water, and thus offered advantages which the fathers were not slow to avail themselves of. It was on the lands of this mission that the first potatoes grown in California were raised, in 1826. The privilege of planting this esculent was given to the natives without limit, and they so improved their opportunities that the whalers, which made a regular stopping place of Monterey, supplied themselves with great quantities. The temporal welfare of the estate had reached a great development in the year 1825, when the fathers possessed 90,000 cattle, 50,000 sheep, 2,000 horses, 2,000 calves, 370 yoke of oxen, with merchandise to the value of $50,000, and over $40,000 in silver.

Cypress Point.

The officers of the coast survey, Prof. Sanders, and hundreds of others who have visited Cypress grove, declare that there are no such trees elsewhere in the world—that this grove stands alone. The ride to this point is one of the most delightful in the vicinity.

House Furnishing.

IMPORTANT SEMI-TROPIC COLONY ENTERPRISE.

The Fairest and Best of Colonies.

THE REDLANDS,

In San Bernardino County, California.

Superior Soil, Climate and Irrigating Improvements.

The following information concerning one of the best-reputed and promising colony enterprises in southern California, is from the Riverside *Press*, of San Bernardino county, April 1, 1882:

A Model Settlement.

No place in California has sprung into public notice so rapidly and gained so deserved a reputation in so short a time as has the new tract of Redlands.

This tract is located between Old San Bernardino and Crafton on the south side of Mill Creek ditch and comprises 2 500 acres of as choice fruit lands as can be found in the State. The land is of a reddish clayey loam, not clayey enough to work hard, having sufficient admixture of sand to hold moisture and give the best results when planted to orchard or vineyard. The red lands of the State are everywhere celebrated as being superior for tree and vine.

The tract slopes to the northwest and commands one of the grandest views to be found in the State. To the north and northwest lies stretched out, several hundred feet below, the San Bernardino valley, with the towns of San Bernardino and Colton plainly in view, while, looking to the westward at night, the headlights of the Eastern-bound trains can be distinctly seen for 40 miles. Beyond the San Bernardino valley to the northwest, and stretching around to the northeast, the chain of mountains tower 9,000 ft. above the sea level, culminating in Mount San Bernardino, 11,000 ft. high, and Grayback, 11,550 ft. high, both of which stand up boldly from the Redlands point of view, and whose tops are covered with snow more than half of each year. Around to the left of the picture are the Cucamonga peaks, 40 miles distant, which complete the semi-circular mountain chain that makes such a beautiful background to the landscape. For mountain and valley scenery no more beautiful location can be found in the State than Redlands, outside of Yosemite valley.

Redlands is located 10 miles from the county seat, the same distance from Colton, and 15 miles from Riverside. The track of the Southern Pacific railroad runs within two miles of the Redlands tract, and at an early day a depot will be established for the accommodation of Redlands, Lugonia, Crafton and Old San Bernardino.

The Redlands tract is laid off by running avenues from northeast to southwest, one-quarter of a mile apart and cross streets at right angles to those avenues every half mile, thus cutting the tract into blocks, each of which contains 80 acres. The avenues are each 100 ft. wide, and are being graded and set to shade trees, there being a row of trees down the center of each avenue and a row on either side, making a beautiful double drive with shade trees on either side. Between the front line of the block and the center line of shade trees is a sidewalk 12 ft. wide. The cross streets are 60 ft. wide, and are also being planted in shade trees on either side. The streets furnish a single drive with sidewalks on either side.

Although the first work done on the tract by settlers could not be commenced till about the 1st of January, 1882, there are at the present time some 10 or 12 houses erected and in process of erection, with several to commence work soon. A number of tracts, in addition to those on which houses are being built, are being plowed up and planted to orchard and vineyard.

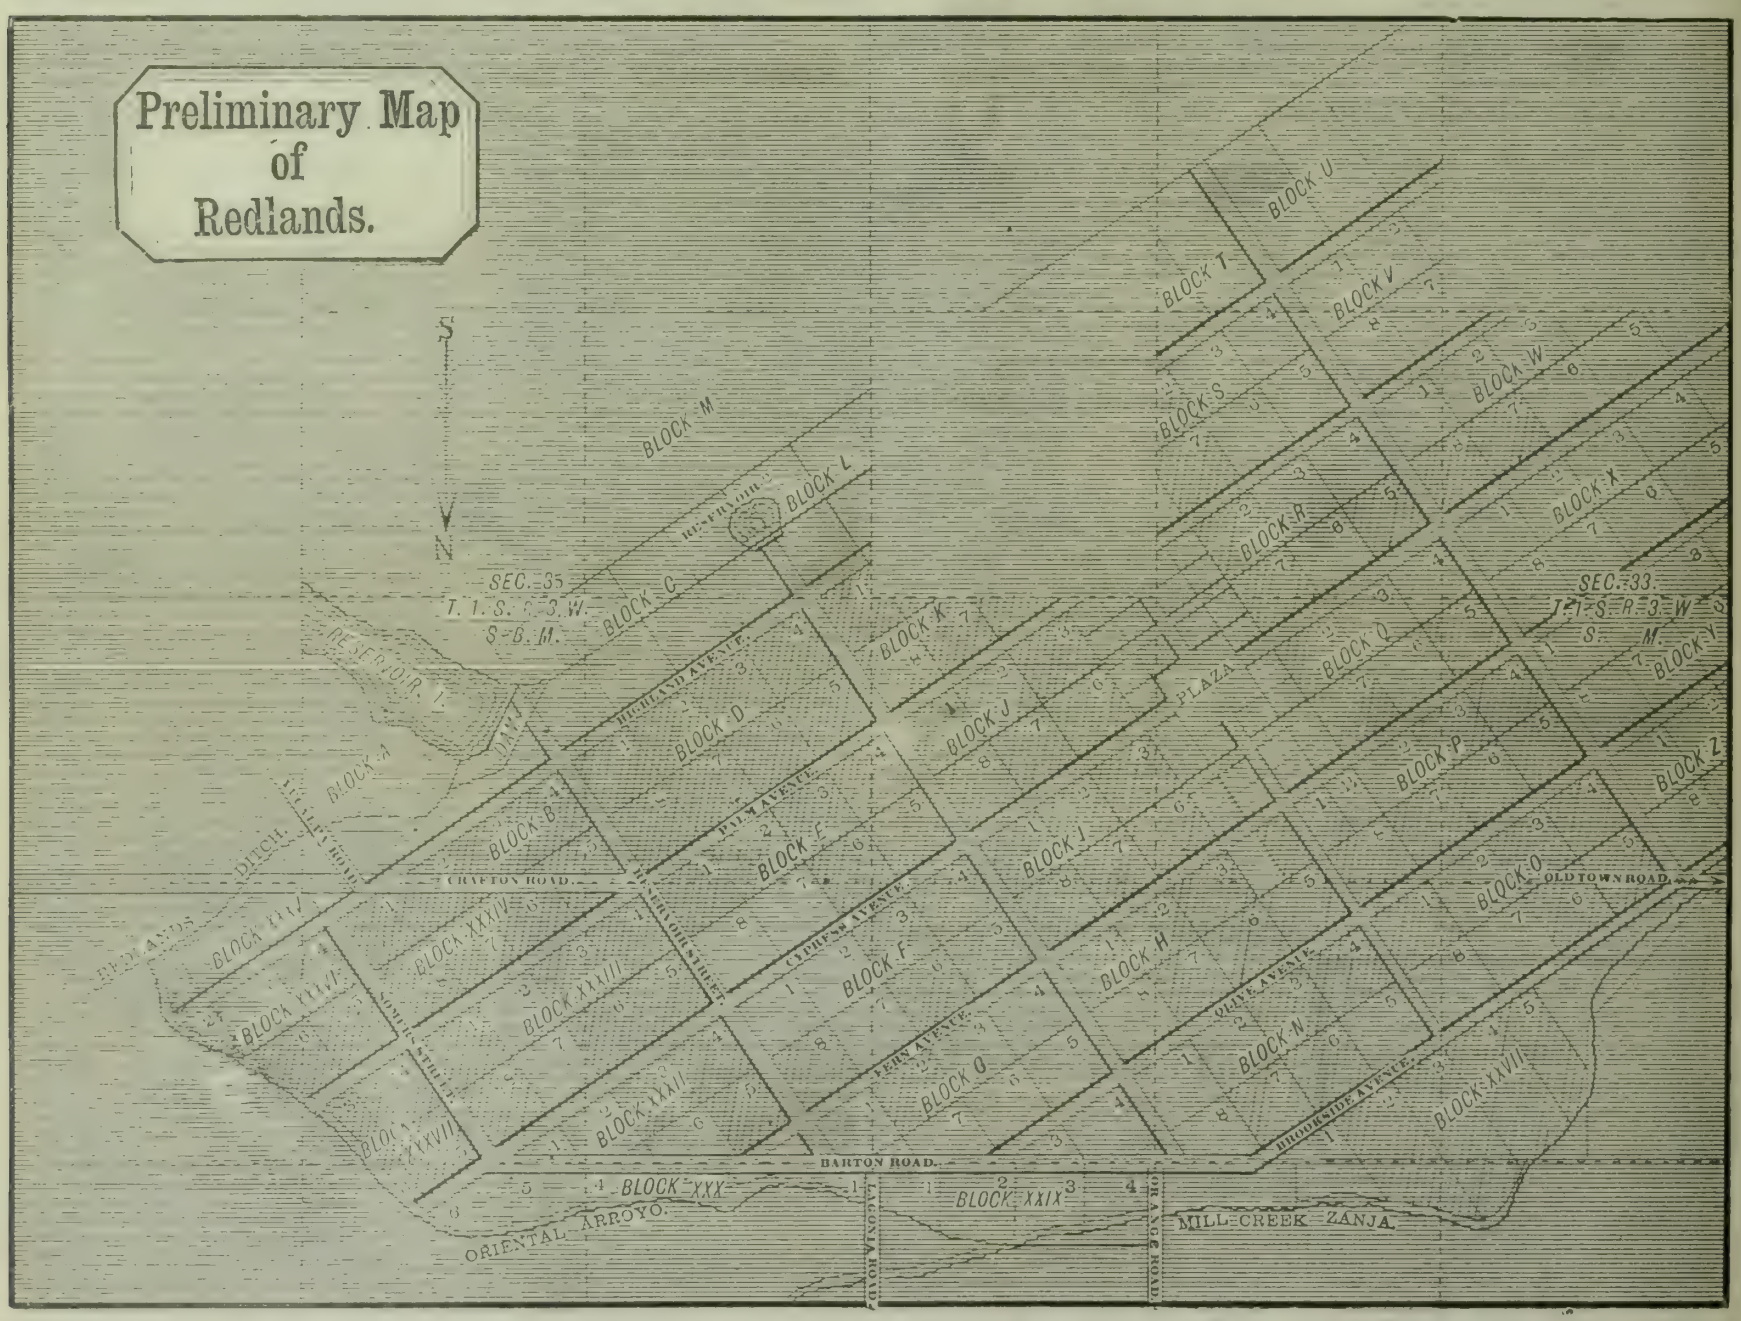
The lateness in the season when the land was bought by purchasers, prevented many from getting their land set out to trees or vines this year, but all who have purchased are making arrangements to plant extensively next winter and spring.

Town Plat.

Near the center of the tract is a town plat, consisting of 140 acres, cut up into lots ranging from an ordinary business lot to two and a half and five acre residence lots. Within this town plat, at the crossing of Palm and Center avenues, is a circular public park, with a fountain in the center. This park will be improved by the proprietors of the tract. Above the town plat will be constructed a small reservoir, from which iron pipes will be laid to supply the town with water under pressure.

The Water System.

Is one of the most perfect in the State. The water supply comes partially from the South Fork ditch of the Santa Ana river and partially from private water developments in the Santa Ana canyon and other localities. The waters are to be conducted to a large reservoir, located in a canyon adjoining the tract, and distributed from this reservoir by means of cement pipes. These pipes will be so laid as to carry the water without loss to the highest point on each ten-acre lot. The basis of water supply is one inch of water, statute measurement, to each eight acres of land. This is ample, and up to the best irrigated tracts in the State.



Work on the water system is being pushed as rapidly as men and money can do the work. The dam to the reservoir, which is ultimately to be 60 and perhaps 80 ft. high, is now about half done; the iron discharge pipes and watergates are in position, and nearly four miles of the largest distributing pipes are already manufactured, and most of this is laid. This portion of the work embraces the 8, 10, 12, and 14-inch pipes—the heaviest portion of the work. The smaller pipes, none of which will be less than four inches, will be made and laid as soon as the larger pipes are completed.

The orange, lemon, apricot, peach and raisin grape, will grow here to perfection.

Following is a list of the property owners at the present time. Those who have moved upon the tract are credited to Redlands, and the others to localities where they now reside:

Names.	Acres.

Judson & Brown (San Bernardino, P. O.), owners of the tract, are energetic men, who leave no stone unturned to make their enterprise a success. They do not try to figure how little they can do and sell their land, but where they can put another thousand dollars and make the tract more desirable to first-class settlers. There is nothing shoddy about their operations. Redlands will stand in a few years as one of the finest settlements on the Pacific coast,

LAKE COUNTY.—The A. O. U. W. picnic, at Smith's grove, near Lakeport, Tuesday, May 23d, seemed to be an occasion of enjoyment to the multitude present. The Order formed in procession, at 11 o'clock, under the marshalship of Gen. Banks, headed by the band, marched to the stand there presided over by your worthy townsman, Hon. L. H. Gruwell. An address of welcome was delivered by Dr. Crumpton in his usual characteristic style; then came an original poem by Miss Lillie Martin, which was certainly a fine production; orator of the day, R. K. Nichols. The oration passed out of the hands of critics as one of the best of Ralph's productions. A short address was then delivered by Mr. Carpenter, of Ukiah, who was listened to with great attention. The dinner-bell rang through the lungs of Capt. Crump, after which the assemblage repaired to tables loaded with the good things of life, which did great credit to the committee in charge. After dinner a good, social time was indulged in by all. Nothing occurred to mar the pleasures of the most fastidious.—*Cor. Lower Lake Bulletin.*

IONE.—The Amador *Dispatch* says: The workmen of Ione are making preparations on a grand scale for the forthcoming Fourth of July celebration in that place. The programme is not yet completed, but we understand that the laying of the corner stone of the new schoolhouse, under the auspices of the Masonic fraternity, will be one of the items, which will be quite interesting to many who have never witnessed such a ceremony.

BRO. CHARLES FRANCO, 1051 Market street, opposite McAllister street, makes a specialty in furnishing the best bedding and upholstering in all its branches. As a skillful workman and reliable man, parties wishing anything in his line would do well to give him their orders.

BRO. DAVID P. BELL, well and favorably known as a wholesale and retail dealer in fresh, smoked and salt fish, has taken stalls Nos. 27 and 29 Bay City market, and is prepared to furnish the best this market affords, and at lowest rates. Telephone connection and goods delivered free to any part of the city.

FRANK P. LATSON & Co., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery St., under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc., and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

C. P. HUNTINGTON has offered $5,000 to the Central and Southern Pacific Railroad Employes' Mutual Benefit Association wherewith to get up a library.

INSURANCE.—Now that the season has arrived when the farmers will, to a large extent, insure their growing grain and buildings, we call attention to the Ætna Insurance Co., of Hartford. Its record is without a parallel in this country. Organized in the year 1819, with a capital stock of $150,000 its assets had reached over $6.000,000 in 1871. $3,766,423 was contributed to rebuild Chicago, a larger amount than any Fire Insurance Company has sustained since the world began. To-day its cash capital is $4,000,000, and its assets (exclusively fire), $8,902,272. Fair dealing and absolute security is offered by this old Company.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P OWEN—Santa Cruz county.
B. W. CROWELL, San Benito and Monterey counties.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
H. W. MILLER.

Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

DO NOT DELAY.—Send us your subscriptions promptly Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.
J. H. CROSS, Proprietor.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

P. O. BOX 417 STOCKTON, CALIFORNIA

THE NEVADA FISH HATCHERY.—A Reno *Gazette* reporter recently visited the State fish nest, corner of Second and Nevada streets, Carson City, where Fish Commissioner Parker carries on the good work which he organized. The eggs do not have to be set on, exactly, but great care is required to bring out the little fish. He has three troughs, 18 ft. long, 16 inches wide, and 10 inches deep, coated with asphaltum and coal tar, through which runs a stream of fresh, cold water. One trough now contains 10,000 young salmon from the McCloud river, which will be turned loose in the Truckee shortly. The other two contain 50,000 New England brook trout, about one inch long, hatched from eggs given to the State by Capt. J. B. Overton. They will be distributed throughout the State. Mr. Parker has an appropriation of $2,000 from the State. He has carried on the work for the love of it, without any personal recompense. The State's money has gone to build a canvas boat, seines, cans, build troughs and pay a man a small salary during the hatching period and for distributing. In a small aquarium in his house he has some pets that came a long way. They are land-locked salmon and play around like canary birds. Once in a while one leaps clear over the side. He got 10,000 eggs and only lost one-half of one per cent., which shows scientific hatching.

THE ELECTRIC LIGHT AND ACOUSTICS.—The introduction of the electric light in the Grand Opera House, Paris, has, as might have been expected, greatly improved the acoustical properties of the building. Of course, the incandescent system can produce no disturbance of the atmosphere and no heated gases.

THE TONGUE.—Of the sense of taste, Prof. McKendrick states that the base of the tongue is most sensitive to bitters and the tip to sweets. A substance must be soluble in the fluid of the mouth to create taste, but no definite relation has been found between the chemical condition of bodies and their taste.

CONSUMPTION OF BOXES.—It looks, says the Reno *Gazette*, as if the consumption of boxes on the Pacific coast would continue to increase and the manufacture of them become one of the greatest industries in the country. There is already a vast amount of packing going on, and it must increase rapidly for many years, for the resources of the coast are not one-tenth part developed. The whole East is open to the California producer of grapes, apples, pears and small fruits, while the whole world is drawing on her for salmon, canned goods, borax and other staples. Nevada, Utah, Colorado, Wyoming, Arizona, New Mexico and Texas send for greens and vegetables every day in the year nearly, and they all have to be boxed. All this time great vineyards are being planted to grapes, the foothills are being cleared and orchards set out, the rivers are being stocked with salmon and trout, borax beds are being opened up in Nevada, soda is being shipped to San Francisco by the car-load, to be refined and canned, the sugar trade is growing, manufactures are increasing, and they are all shipped in wood. The outlook is a grand one, and it should stimulate the manufacturers to make preparations for working cheaply and to advantage. The present way of turning out boxes is very extravagant.

FORMATION OF ALLOYS BY PRESSURE.—W. Spring has shown that, when a mixture of bismuth filings, cadmium, and tin, in the proportions necessary for the formation of Wood's alloy, is subjected to a pressure of 7,500 atmospheres, the mass thus obtained powdered and again subjected to the same pressure, a metallic block is formed which has all the physical properties of the alloy. Its specific gravity, color, hardness, brittleness, and fracture are the same; and when thrown into water heated to 70°, it melts at once. In like manner Rose's metal was made by subjecting the proper mixture of lead, bismuth, and tin to high pressure. If zinc and copper filings are repeatedly subjected to pressure, a mass resembling brass is finally obtained.

Pays particular attention to Lung and Female Diseases. Also, treats Cancer.

The Crowning Triumph of Electric Science.

Horne's Patent Electric Belt leads the world in grand improvements, scientific construction, constant electrical action. Most popular, powerful, cheapest, durable, and effective in curing diseases. Thousands of well-known citizens, merchants, mechanics, ministers, laborers, bankers, physicians, editors and Senators cured of diseases which defied all medical skill. This belt received the highest award and Medals at the California State Fair, 1880 and 1881—the only medals ever awarded by the State Fair to Electric Belts. Send for Horne's Electric Herald. Testimonials of highest character and valuable information free.

The Creation of Electric Forces.

A water-wheel, by being employed to generate electricity, may light our rooms, cook our dinner and ripen our peaches. We can have light from it by which we can work as easily at night as in the day—a light which will neither consume our fresh air, nor vitiate it with foul gases, nor smoke our ceilings and destroy our curtains; which can set fire to nothing; the globe of which can be hooked to an invalid's bed-curtain without risk, or attached to flexible wires and taken into the most confined corner to give light to a workman without danger of fire. It would fill a volume to state at length all the practical advantages which this development of electricity has opened up already, and more than a volume to state all that it may be expected yet to accomplish. Let it also be understood that while the foregoing illustrations have been stated in relation to water power, they are equally true for the other powers, such as steam engine, gas engine, horse power or human labor. The fixed engine on a farm can do the plowing hundreds of yards off. The gas engine that pumps water by day can light the house at night. The horses that drag coal carts for many miles to work a steam engine in some outlying place, can be used at home instead, to work an electric machine, with no loss of time, and in many cases with less waste of labor. The convicts on a treadmill can be doing work by it at any part of, or even outside the prison. In a word, the power for work can be generated by any ordinary means, and at any place where the means exist, and can be economically conveyed to the spot where it is to be usefully applied without loss of time and practically in full strength. The tide on the shore can do work far inland; the stream in the mountain gorge can do work on the hilltop; the wind-mill on the eminence can do work in the valley; the horse in the yard or the man in the out-house can do work inside the dwelling. And with all its power, and its universality of application, this new servant which science has supplied us with is the most docile of menials. A touch of a lady's finger will bring into action a power which a thousand men could not resist; another touch will stop its action, or reverse it, in a moment.—*Am. Inventor.*

THE PASSIVE STATE OF IRON.—A peculiar condition of the metal, in which it is found to be indifferent to the action of substances that ordinarily exert a powerful chemical action upon it, has recently been studied by Ramann, with the following results: He affirms that iron is rendered passive when it is heated in the air, when it forms the positive electrode of a galvanic couple, and also when it is immersed in any of the following named-liquids: Nitric acid, solutions of the nitrates of ammonium, iron, silver, aluminum, nickel and cobalt. The passive state, he holds, is due to a firm coating of the magnetic oxide on the surface of the metal, this oxide being sparingly soluble in strong nitric acid, but freely soluble in dilute nitric acid. Finely divided iron, which has been immersed in any of the above liquids, and has been carefully dried in a current of an indifferent gas, may be shown to contain a considerable quantity of oxide by the formation of water when ignited in a current of hydrogen. When iron is dipped in nitric acid, a portion of the metal dissolves, forming ferric nitrate, which is reduced to ferrous nitrate by the excess of iron present. A further reduction then takes place, the ferrous nitrate being converted into ammonia and magnetic oxide.

INFLUENCE OF MECHANICAL HARDENING UPON THE MAGNETIC PROPERTIES OF IRON AND STEEL.—Many investigations upon the relations between the molecular conditions of iron and steel produced by heat, by torsion, and by annealing processes, and the resulting changes in magnetic conditions, have been made. It appears, however, that the effect of mechanical hardening has not been properly investigated, and the results of researches by Mr. L. M. Cheesman will, therefore, probably be of interest. Mr. Cheesman's method of research consisted simply in determining the magnetic moment of the magnetic bar after it had been subjected to mechanical pressures. The results obtained may be summed up as follows: Iron in a mechanically hard condition can receive more permanent magnetism than in a soft condition. The magnetic moment of a steel magnet in a mechanically hard condition is greater or smaller than in a soft condition, according as the ratio of its diameter to its length is lesser or greater than a certain limit.

MEDICAL ELECTRICITY.

HORNE'S Electro Magnetic Belt

Received First Premium State Fair, 1880, 1881

702 Market St., San Francisco.

Proprietor and Manufacturer of the

BEST IMPROVED SCIENTIFIC BELTS.

Liver and Kidney Disease and Indigestion Cured.

Elmira, Solano County, Cal., December 8, 1880.

W. J. HORNE. Dear Sir: I have suffered for a long time with liver and kidney disease and indigestion. I tried several physicians without relief. Having heard a great deal about galvanic belts, I thought I would go to your city and examine the many different belts and rads, all of which I found to be a humbug, as they have all been worn by different friends of mine. After a careful examination I purchased one of your belts, and have worn it three months. It has restored my health entirely. I therefore recommend your belt, not only as a privilege but as a duty I owe to all my fellow sufferers. Many thanks to you. Yours respectfully, L. WARNER.

From the Leading Patent Agent in San Francisco, Cal.

MR. W. J. HORNE, Prop., 702 Market St., S. F.—Dear Sir: I have used your Electro-Magnetic Belt, and I deem it of incalculable value to those afflicted with nervous prostration and other kindred diseases. Yours, etc.,
December 8, 1880. C. W. M. SMITH, Patent Agent and Lawyer, 224 Sansome St., S. F.

Strong Indorsement.

MR. W. J. HORNE, Prop., Horne's Electro Magnetic Belts. SAN FRANCISCO, July 23, 1880.

Dear Sir: I have used your Electric Belt for some time and am much pleased with it. It has great power, does not require the frequent use of acids, and is very durable. I can recommend it to all persons out of health and requiring treatment. Yours Very truly. REV. H. LOOMIS, 320 Sansome Street, S. F.

An Arizona Endorsement.

CAMP VERDE, Yavapai Co., Arizona, March 18, 1882.

W. J. HORNE, ESQ.—Dear Sir: Enclosed please find $20, for which send me one of your best Electro-Magnetic Belts, and oblige. The Belts I ordered some time since have proved a great benefit. I speak from experience. There are several of my neighbors going to order the Belt on my recommending it to them, and I shall continue to do so, for I have found great relief from the use of them. Respectfully yours. D. W. STRAHAN.

This Belt Will Cure the Following Diseases Without Medicine:

FEMALE DISEASES.—Pains in the Back, Hips, Head or Limbs, Nervous Debility, Lumbago, General Debility, Rheumatism, Paralysis, Neuralgia, Sciatica, Disease of Kidneys, Spinal Diseases, Torpid Liver, Gout, Sexual Exhaustion, Seminal Emissions, Asthma, Heart Disease, Dyspepsia, Constipation, Erysipelas, Indigestion, Sexual Weakness, Impotency, Catarrh, Piles, Epilepsy, Dumb Ague.

Belts forwarded to all parts of the United States at my expense on receipt of price

Electro-Magnetic Belts, new style.....$10

The Signing of the Declaration.

We give on this page a reduced copy of Trumbull's famous historical painting, "The signing of the Declaration of Independence in Philadelphia, July, 1776." As is generally known, the Declaration was written by Jefferson. He was unsurpassed in his time in power of expression. He accordingly framed it; Franklin and Adams suggested a few verbal amendments; Sherman and Livingston had none to offer, and the document stood ready to be reported to the Congress.

Jefferson used to relate, "with much merriment," says Parton, that the final signing of the Declaration was hastened by a very trivial circumstance. Near the hall was a large stable, whence the flies issued in legions. Gentlemen were in those days peculiarly sensitive to such discomforts by reason of silk stockings; and when this annoyance, superadded to the summer heat of Philadelphia, had become intolerable, they hastened to bring the business to a conclusion. This may equally well refer, however, to the original vote; flies are flies, whether in July or August.

American tradition has clung to the phrases assigned to the different participants in the scene: John Hancock's commentary on his own bold handwriting, "There, John Bull may read my name without spectacles;" Franklin's, "We must hang together, or else, most assuredly, we shall all hang separately;" and the heavy Harrison's remark to the slender Eldridge Gerry, that, in that event, Gerry would be kicking in the air long after his own fate would be settled. These things may or may not have been said; but it gives a more human interest to the event, when we know that they were even attributed. What we long to know is, that the great acts of history were done by men like ourselves, and not by dignified machines.

This is the story of the signing. Of the members who took part in that silent drama of 1776, some came to greatness in consequence, becoming Presidents, Vice-Presidents, Governors, Chief Justices, or Judges; others came, in equally direct consequence, to poverty, flight, or imprisonment. "Hunted like a fox by the enemy," "a prisoner 24 hours without food," "not dar- to remain two successive nights beneath one shelter,"—these are the records we may find in the annals of the revolution with respect to many a man who stood by John Hancock on that summer day to sign his name. It is a pleasure to think that not one of them ever disgraced, publicly or conspicuously, the name he had written. Rejoicings everywhere throughout the colonies followed the signing.

FIDELITY, No. 136, will hereafter meet in their new hall on Post street, between Stockton and Dupont. It is a very fine hall, 75x30 ft., richly furnished. It has been christened Fidelity hall.

Consumption.

It has now been almost definitely ascertained that the terribly fatal disease, consumption, is caused by a microscopic parasite or bacillus, propagating itself probably by a thousand different methods of inoculation in the lungs. A German scientist, Dr. Koch, has discovered the exact nature of this *bacillus*, having propagated it artificially and inoculated the disease into animals, all of which died of the "consumption" so inoculated. It will follow, as a matter of course, that the exact nature of the disease being known, the cure will probably soon follow, and truly a cure for consumption will be the "greatest boon ever laid at the door of afflicted humanity."

The inroads of this terrible death-dealer among our ranks, the germs of disease he is scattering broadcast upon the coming generation, surely warrant us in saying that it would be a "blessing of Heaven" to have a specific for this deadly parasite, even if scores of the inferior animals, and occasionally a condemned criminal, should have to suffer vivisection, or any other process, in the interest of science.

A GOOD EXAMPLE.—Past Master E. M. Reading, of Fidelity Lodge, No. 136, and one of the most prominent members of the Grand Lodge, and one of the incorporate directors, was elected last Wednesday night, and accepted the position of Inside Watchman of his Lodge. Bro. Reading, in this instance, shows an example that can be profitably carried out by some others.

F. G. ABLES, P. G. M. W. of Oregon, has returned from the East, where he was in attendance as Supreme Representative. He is well pleased with the general action of the Supreme Lodge. The decision of the Supreme Lodge making June 1st the date of separate jurisdiction is final, and settles the controversy between Oregon and the Supreme jurisdiction.

WE acknowledge the receipt of an invitation to attend a supper to be given by Mission Lodge, No. 56, A. O. U. W., at their hall, Saturday evening, July 1st, after the installation of officers. Many thanks, and if we can't be present we would like to be.

Ephemerides.

Co-operative insurance societies are springing up on every side like mushrooms after the first heavy rains of the fall, and it might be appropriately continued to say that they will as quickly disappear. Of course, some of the older and better-established societies will endure, just as some of the better established and more reputable life insurance companies have withstood the ravages of time and tide; but, in order to endure for ages, through storm and sunshine, it would seem that fraternal societies should have in view some higher and nobler end than the mere payment of a specified sum of money to the relatives of a deceased member, or his endowment at the end of a specified time; not that this is not commendable, for notwithstanding it has been asserted by many persons—and officers of the law not excepted—that these "Chosen Friends" and "Workmen" and Life Insurance Co.'s are only so many incentives to crime, yet we believe that the small amount of abuse to which the principle is subjected will not warrant the abrogation of that principle, when the amount of good done is comparatively so great. But because we believe that in order that a society may endure it must have for its basis some great and beautiful historic principle. Witness the history of Masonry, Odd Fellowship, K. of P., A. O. U. W. etc. Then let us pass these small associations by and lend our support to the advancement and improvement of those already well established. All these small fry will pass like the ephemera away.

MEMBERSHIP, ETC.—The average membership for the year 1881-82 of New York was 15,583; California, 12,537; Pennsylvania, 12,525; Illinois, 8,913. In Ohio, the death rate per thousand for the year 1881-82 was 18.39; Indiana, 14.12; Georgia, 12.67; Kentucky, 12.10. The total membership of New York was 16,294; California, 13,943; Pennsylvania, 12,835.

BRO. F. H. ALDRICH, of Shepherd Lodge, No. 74, Pennsylvania, paid Burns Lodge a visit on Thursday evening. He reports everything n his juriadiction as in a prosperous condition.

SIGNING THE DECLARATION OF INDEPENDENCE.

In the Lead.

The A. O. U. W., being the pioneer beneficial organization, has, of necessity, found its advancing way to lie over untrodden ground, with no map, or chart, or compass to guide. That it has made mistakes is beyond dispute, but that, as a rule, it has progressed with rare wisdom, no one, we presume, will have the temerity to question. Strange as is the fact, yet of all the beneficial societies that have sprung from the loins of the Workmen, not one has dared, like its progenitor, to found its system on the Republican idea; but on the contrary, all have chosen the despotic principle instead. We constantly marvel at this as we recollect that this is the 19th century—that old ideas are rapidly passing away, and new ones, more in accord with the age, are taking their places. Either the republican form of government is the correct one, or our nation is destined to early decay and dissolution, and must give way to some form of despotism. We do not feel inclined to vote republicanism a failure. (Of course, we speak in no partisan sense.) We most sincerely believe in the government of the many, and not of the few; in the division of power and duties, and not in their concentration; in the largest liberty of the individual consistent with the safety of the whole. It is possible the A. O. U. W. has gone too far in the way of liberal government, and so weakened its national character and endangered its general unity, but it is far better to err in the way of progress than make no advance at all. We most religiously believe that not many years will pass ere the republican plan will be found so much better than any other, that other societies will be constrained to follow in the footsteps of the A. O. U. W.

EVERY few days some Select Knight will write to the Grand Commander, saying: "I am just past 51 years of age; I have always intended to take out a beneficiary certificate, but have neglected to do so. Can you not get me in now?" And to every one of these the Grand Commander must emphatically say, "No!"—*Fraternal Censor.*

DISTRICT DEPUTIES.—The several District Deputies of San Francisco are very zealous and active in the discharge of their official duties. Schools of instruction have been appointed, and all of the Deputies of this city make a practice of visiting Lodges a number of nights in each week.

THE Grand Lodge of the Oregon and Washington Territory jurisdiction, A. O. U. W., will meet at Olympia, July 12th.

THE tenth annual session of the A. O. U. W. met at Cincinnati June 6, 1882.

THE Society of Decorative Art of California offers 11 cash prizes of from $20 to $100 each for the best pieces of embroidery according to specifications, the most artistic in design, color and work.

A MAJORITY of the persons arraigned for crime, according to one of the best-known New York judges, are boys from 12 to 20 years of age, who have got into trouble while intoxicated.

A MEMBER of the Jewish Aid Society of New York city states that a number of Jewish refugees who refuse to work will be returned to Russia with their families.

Home Miscellany.

To F. F. on his Birthday.

"We live in deeds not years," the poet said,
Oh, comrade mine,
If this be so, and thy good deeds were weighed,
What age is thine?

With old Methusaleh's, thy days compare,
If of kind thought,
And generous sacrifice and patient care
Long life be wrought.

But, if we measure youth by warmth of heart,
By guileless joy,
By dauntless faith and hope, how young thou art,
My grey beard boy!

Who talks of birthdays? Like an oft heard chime
We'll let them pass;
No years touch the immortal: Father Time,
Put up thy glass

MRS M H. FIELD.

San Jose, Cal.

Pamela's Faculty.

They talked over Deacon Semple's death in the sewing circle. It was very sad that he should have died. So suddenly, too, of pneumonia, poor man. But Mrs. Calkins, at whose house the society met that week, could not help thinking that it would have been a very dull meeting if he had not; for since everybody had found out just why Luke Judkins had been obliged to mortgage his farm, and Dr. Saunders' marriage with his housekeeper had become an old story, there was absolutely nothing to talk about. It was also providential that he should die just after planting was over and before haying had begun. He was growing very deaf, too, and was always shiftless. Being a deacon, of course he was prepared, and there was really not much to mourn for, except that now Pamely would have to take care of herself, and Pamely had no faculty. Ruthy Ann could go on keeping school, as she had done for years, and the twins, luckily, were married. Pamely was the only one that was left unprovided for. Pamely was one of the kind that always was unprovided for—the kind that had no faculty.

The farm was all run out; and if it were not, Pamely wouldn't know any better than to expect to raise pumpkins on a pea vine. If she was a farmer's daughter, she didn't know but what potatoes came up of their own accord, and weeded and dug themselves. Mrs. Ichabod Badger (generally known as Mis' Ichabod) thought it probable that she even supposed that they washed themselves and jumped into the dinner pot. And it was evident that she set a sight more by posies than she did by garden sass.

She was always littering up the house with weeds and stuff out of the woods, and she drew pictures when she'd better have been drawing candles or making soap. She took after the Spencers—her mother's folks. One of them wasn't half witted and wrote verses, and another painted pictures, and never amounted to anything. And Pamely was headstrong; she never seemed to pay any attention to good advice. She was always as pleasant and amiable about it as could be, but she would go right on in her own way. That was like her father; when they tried to dismiss the Rev. Mr. Caldwell for unsoundness of doctrine, Deacon Semple, he wouldn't agree to it. He didn't get excited and call hard names, as the others did, but though they argued and argued, he wouldn't be convinced.

Mis' Ichabod was of the opinion that a committee of ladies ought to call upon Pamely, and advise her to go and keep house for old Hiram Hutchinson. He had a large farm and two invalid daughters, one afflicted with spinal disease and the other with epilepsy; so 'twas a hard place, and of course she would keep everything at sixes and sevens, not having any faculty; but old Hiram was willing to take her because he was very close, and she would not expect much. And Mis' Hosea Blodgett added that as Hiram was a widower, nobody knew what might happen. He was over fifty, and hard to get along with, but then Pamely couldn't be far from 25, and ought to be willing to make a sacrifice for the sake of a home. Ben Seaverns, who used to keep company with her, had gone off to sea five years before, and had probably got drowned, to say nothing of being a shiftless good-for-nothing, and surely there was no man in Brimblecom who wanted to marry a girl without faculty.

Before the meeting adjourned, Mis' Ichabod, Mis' Hosea Blodgett, and Miss Nancy Perkins, the postmistress, were appointed a committee to labor with Pamely.

There was no doubt about the zeal of the committee. Bright and early the next morning—so early, in fact, that the breakfast dishes were not washed in any town except Brimblecom—the three ladies presented themselves at the front door of Deacon Semple's late residence; front doors were reserved for state occasions in Brimblecom. The committee, after consultation, had decided that this was an occasion which rendered the use of the front door appropriate.

Keturah Grant, who had been maid-of-all-work in Deacon Semple's family for half a century, hobbled to the door, and admitted them to the sitting-room; and there was Pamela, with a great bunch of weeds—buttercups and clover and white weeds—painting, actually painting, at that time in the morning! She wore a high-necked and long-sleeved apron, which was bedaubed with paint, and on her nose was a smirch of bright yellow.

The committee with one consent heaved a deep sigh.

"Seein' Scripter commands us to be kind to the widow and the fatherless, we thought we'd come and tell you that old Hiram Hutchinson wants a housekeeper," said Mis' Ichabod, who had been chosen chief spokesman, in view of the "flow of language" for which she was renowned.

Pamela turned an innocent, puzzled face upon Mis' Ichabod—a very lovely face, with a pure, pale skin, and soft, shy, brown eyes, though in Brimblecom, where rosy-cheeked beauties were the fashion, they had never thought of calling it so.

"Oh, the widower! I couldn't think for the moment what you meant. Poor man! I am sorry if he can't find one. But nobody could expect me to give up Keturah, surely! She is growing too old; and she wouldn't leave me, anyway."

The committee looked at each other. Their mission seemed a somewhat difficult one to perform. Was Pamely so innocent as she looked? Mis' Ichabod had a dreadful suspicion that she was deep, and she resolved not to be daunted.

"We thought you might like the place yourself, seein' you was left so kind of dependent," she said.

"I? Oh dear! I haven't the least bit of faculty, you know," and Pamela laughed merrily.

"Them that hain't any faculty have got to try to do something, if they don't want to be objicks of charity," said Mis' Ichabod.

"I don't think Brimblecom will ever have to take care of me. If it does, I am such a little thing that it won't cost much."

There was the suspicion of a flush on Pamela's cheek and a tense look about her mouth that the committee did not observe. They only saw her laugh, and they arose in high dudgeon.

"I hope the time won't come when you won't find it a laughing matter," said Mis' Hosea Blodgett, who was determined not to come away without saying something; "that would be so humiliating to tell of."

"Oh, I hope not," said Pamela, sweetly.

"That was the very worst thing about Deacon Semple—you never could make him mad," said Miss Nancy Perkins, as she opened the gate. And though the other members of the committee wouldn't acknowledge it, Pamela's resemblance to her father in this respect was the thing that they had found most aggravating in their interview with her.

Before they reached their homes they repented that they had not said more, but there was something in Pamela's manner that made it seem an impossibility. The committee could not explain it plainly. Pamela had been quite pleasant and polite, but they didn't care to go again. However, they quite agreed that the matter ought not to rest there, and they were willing, even anxious, to go and confer with Mr. Stockbridge, the minister, upon the subject. Perhaps he could be induced to advise her. She would not dare to be so high and mighty with the minister.

The Rev. Mr. Stockbridge was a grave and dignified man of nearly 40, who, when he had first come to Brimblecom, 10 years before, had had the caps of half the young ladies of his parish persistently set at him. They had now, if they had not wholly abandoned the cap-setting, learned to "draw it mildly, lest it were all in vain," for the minister had never shown the slightest signs of being caught. He seemed somewhat embarrassed when the committee visited him and made known their errand. As Mis' Hosea Blodgett said, in describing the interview to her friends:

"He kinder turned red, and then he kinder turned white, and he looked all ways for Sunday, jest as if we'd said something that wa'n't proper. And when he said anything, which wa'n't for as much as a minute, he up and said jest as good as to say that he didn't consider 'twas any of his business. But Mis' Ichabod she jest talked and argerfied beautiful about how the town would have to take care of her, and bein' her father was a deacon, the church ought to do its duty, advisin' and laborin' with her if she was headstrong and set-up, and she convinced him—with a few words that I let fall as 'twas given me to speak—and he said he'd go and deal with Pamely accordin' to the best wisdom and judgment that was given him. When she sees him a-comin' she'll dowse her peak, for there's nobody in Brimblecom that ain't afraid of the minister."

Within a week the committee waited upon the minister to hear the result of his advice to Pamela. It was very hard to find him at home; they tried four times before they succeeded. If he had been anybody but the minister, they could not have avoided the painful suspicion that he slipped out of the back door when he saw them coming. And when at last they did find him at home, his report was not altogether satisfactory.

"Miss Semple did not care to accept the position of housekeeper to Mr. Hiram Hutchinson," he said, as if Pamela were the greatest lady in the land, and could pick and choose positions. But then he was a minister, and ministers couldn't be expected to talk just like common people.

"What is she a-goin to do, then?" demanded Mis' Ichabod severely. "I don't know of any other chance for her."

"I—I offered her a position, but she declined that, also," said the minister.

The committee looked thunderstruck.

"I do hope it wa'n't to keep school," said Mis' Hosea Blodgett, recovering herself suddenly, "for she hain't a mite of faculty, everybody knows. Why, I asked her once if she understood mathematics, and she said she could do addition if you gave her time. My Angelia understands mathematics, and besides beautiful learnin', she's got a real faculty for keepin' school.

"It was not a position as school teacher," said the minister.

"She could kind of get along with housework, though she hain't any faculty. I hope the folks ain't very particklerler," said Mis' Ichabod.

"As she declined the position, it does not seem to matter whether they are or are not," said the minister.

If Mis' Ichabod had not stood very much in awe of the minister, he would have then and there received "a piece of her mind," as she afterward declared; "for if there was anything that provoked her beyond endurance, it was a close-mouthed person." But as he was the minister, there was nothing to do but to take leave of him with a coldness and dignity which should give some token of their displeasure.

As if he couldn't tell them just as well as not, who wanted to hire Pamely to do housework! But there was one comfort—the committee knew there was nothing going on in Brimblecom that they couldn't find out.

And just after she had expressed that opinion, Mis' Ichabod was so overcome by some sudden thought that she fairly gasped, and leaned for support against the town pump, which providentially stood in her way.

"I heard that Joanna Leach wanted to go home because her sister's twins had the measles. The minister wanted Pamely to keep house for him!" she gasped.

"Well, Mis' Ichabod, if you hain't got an understandin' worth havin'! And though I never breathed it to a mortal before, I've had my suspicions that the minister wa'n't all he'd ought to be," exclaimed Mis' Hosea Blodgett.

"I never knew a man to have one white eyebrow for nothing," said Miss Nancy Perkins, darkly.

Before night the report had spread all over Brimblecom that the minister had asked Pamela Semple to keep house for him. Mr. Stockbridge was certainly the last person to be suspected of an impropriety, but appearances were deceitful. He surely must know that he ought to have a housekeeper who was at least 50, and it was eminently proper that she should be toothless, cross-eyed, and disfigured by smallpox, as Joanna Leach was. If Pamela were an especially capable person, the case would be somewhat different; but to be willing to bear with a housekeeper who had no faculty, he must have a personal regard for her.

The oldest inhabitant could not remember such an excitement in Brimblecom. The Rev. Mr. Caldwell's heresy had been tame, and the report that Dr. Saunders had another wife living only mildly exhilarating in comparison.

But several weeks went by before any sound of it reached the minister's ears. Happily for him, Brimblecom had a wholesome fear of the minister. But at length, owing mainly to the efforts of Mis' Ichabod, Mis' Hosea Blodgett and Mis' Nancy Perkins, it was decided that at the next church meeting one of the deacons should question the minister concerning the matter. Such a crying scandal must no longer remain uninvestigated.

It was a great day for Brimblecom. There had not been such an attendance at a church meeting since the Rev. Mr. Caldwell's trial for heresy. Mrs. Deacon Simmons said it seemed so much like county conference that she got up at four o'clock and went to baking a great batch of pumpkin pies before she remembered what she was about.

If the minister had any idea of what it all meant, he made no sign; and when Deacon Simmons, with awful solemnity, and with a long preamble concerning the duty of a minister to set an example to his flock in righteousness, asked him if he thought it seemly and becoming to ask the daughter of their late Deacon Semple to become his housekeeper, the minister quietly replied that he had never done so.

The committee looked at each other, and everybody else looked at them. Miss Nancy Perkins felt, as she afterward expressed it, as if she "would like to go through to Chiny;" but Mis' Ichabod bore up nobly, and Mis' Hosea Blodgett relied upon Mis' Ichabod.

"Didn't you tell a committee consistin' of Mis' Ichabod Badger, Mis' Hosea Blodgett, and Miss Nancy Perkins that you had done so?" pursued Deacon Simmons.

"I did not," said the minister, with an air of bland and innocent surprise.

This was too much for Mis' Ichabod. She arose, and shaking her forefinger impressively at the minister, demanded:

"Didn't you tell us that you had offered her a situation to keep house? And who in this livin' world could it be that wanted a housekeeper but you?"

"You misunderstood me," said the minister, with great politeness. "I said I had offered Miss Semple a position, and it was not to teach school."

Mis' Ichabod sat down, because nothing occurred to her to say, and for a time there was a silence. Then Deacon Simmons arose and said, like a second Adam:

"I hope you won't take no offense, nor think nothin' more about this, Mr. Stockbridge. It's somethin' that the women-folks have got up amongst themselves, and I guess that it don't amount to but dretful little."

"To relieve any further curiosity about the matter," said the minister, looking straight at the committee, "perhaps I had better explain—although it is an explanation which a man doesn't often make in public—that the position which I offered Miss Semple, and which she declined, was that of your minister's wife."

Mis' Ichabod always averred that if it hadn't been for a bit of cinnamon which she had on her tongue, she would have fainted then.

The church meeting broke up suddenly, the sentiment which Mis' Hosea Blodgett expressed being apparently the sentiment of all—that she should have died in five minutes if she could not have got out where she could talk it over.

"Don't talk to me about that girl!" exclaimed Miss Nancy Perkins, with deep feeling. "There never was a man that it took so much faculty to get as the minister."

"And she wouldn't have him! Depend upon it, there's more in that than meets the eye. She's deep," said Mis' Ichabod.

"What do you think Mis' Moses Gregg whispered to me in meetin'?" said Mis' Hosea Blodgett. "She says Pamely sells the pictures she paints for money—sends 'em off to the city. And besides supporting her and Ketury, she's a-goin' to pay off the mortgage on the farm."

"I hain't never been sorry that I was brought up to work," said Mis' Ichabod. "Vanity and folly may prosper for a season, but we all know where the downward path ends. If Pamely Semple hadn't been sent away to that academy, she might have been as likely and well-behaved as any girl in Brimblecom—if she hadn't any faculty."

And with these remarks Mis' Ichabod withdrew herself from the Council.

On the even tenor of her way went Pamela, working early and late with her brush, and before long a report found its way to Brimblecom that she was considered a remarkable artist, and some things were evident to Brimblecom senses; the mortgage was being paid off, the crops were in a prosperous condition, and old Keturah was renewing her youth.

Brimblecom began to be proud of Pamela. It almost forgot that it had ever been afraid she would become a pauper. Nobody seemed to remember that she had been thought to have no faculty—nobody but the committee.

One or two persons were actually heard to say that it was a pity she didn't marry Mr. Stockbridge, but perhaps she had a right to look higher than the rest of the Brimblecom girls. Mis' Ichabod always shook her head with mysterious meaning when Pamela was mentioned, and said, grimly, "Them that lives longest will see most."

One day triumph came to Mis' Ichabod.

The committee were in the post office—Mis' Ichabod and Mis' Hosea Blodgett were often so kind as to assist Miss Nancy Perkins in assorting the mail—when in came Mrs. Deacon Simmons, who was fat and scant of breath, and in such a state of excitement that the committee had, all and severally, to fan her vigorously before her news could be extracted.

"Don't you think, true as I'm a livin' woman and not a corpse, as I might expect to be, hearin' such upsetting things and hurryin' so—"

"Go on, go on! Pray don't lose your breath!" cried the committee in chorus, fanning vigorously. "We'll never breathe it to a soul."

"Oh, it's all over Brimblecom. That good-for-nothing cretur Ben Seaverns has come back, without hardly so much as a coat to his back, and the rheumatic fever. Been cast away on a desert island, and eat up by cannerbals 'most—which nobody can't say wa'n't exactly like him—and nothing but skin and bones, and the doctor says most likely he won't never be good for anything again, not to mention that he never was. And Pamely's took him in, and she and Ketury is a-nussin him up. And that ain't the worst of it; the minister went up and married 'em! She's took that good-for-nothin' cretur to take care of for life—her that might 'a had the minister!"

"They never got me to believe that she had any faculty," said Mis' Ichabod.—*Harper's Bazaar.*

ENTERTAINING COMPANY.—The whole philosophy of hospitality is summed up by Emerson in the following manner: "I pray you, O excellent wife, not to cumber yourself and me to get a rich dinner for this man or this woman who has alighted at our gate, nor a bed chamber made ready at too great a cost. These things, if they are curious in, they can get for a dollar at the village. But let this man see, if he will, in your looks, in your actions and behavior, your heart and earnestness, your thought and will, what he cannot buy at any price, at any village or city, and which he may well travel 50 miles, and dine sparingly and work hard in order to behold. Certainly let the board be spread and the bed be dressed for the traveler, but let not the emphasis of hospitality be in these things. Honor to the house where they are simple to the verge of hardship, so that the intellect is awake and sees the laws of the universe, the soul worships truth and love, honor and courtesy flow into all deeds." One of the greatest comforts of having a home should be that in it we have a place for friends and even strangers—rooms to more than supply the needs of the family, and extra "leaves" to the extension table. The secret of true hospitality, as Emerson has stated, is in its coming from the heart.

For our Boys and Girls.

Our Puzzle Box.

Cross-Word Enigma.

My first is in young, but not in old;
My second is in lead, but not in gold;
My third is in long, but not in short;
My fourth is in gill, but not in quart;
My fifth is in two, but not in three;
My sixth is in wood, but not in tree;
My seventh is in some, but not in all;
My eighth is in bat, but not in ball;
My ninth is in ounce, but not in dram;
My tenth is in fence, but not in dam;
My eleventh is in meat, but not in ham;
My whole you'll find a river of the West,
If all these letters you have rightly guessed.

ED. J.

A Floral Bouquet.

1. An article, a portion of the body and cash.
2. Unmarried men, a measure and a heavy weight.
3. A projection upon a wheel, an exclamation and a measure of distance.
4. A domestic quadruped and to slide.
5. A cunning animal and a covering for the hand.
6. A falsehood and to be without.

JERRY.

Pyramid Puzzle.

The initials mean departing; the finals, a frame of bars

1. A consonant.
2. A conjunction.
3. A girl's name.
4. A kind of bed.
5. To adorn.

A. B. C.

Curtailments.

1. Curtail to descend and leave a transgression of divine law.
2. Curtail closely confined and leave an instrument for writing.
3. Curtail prodigious and leave to embrace.
4. Curtail a building spot and leave to be seated.
5. Curtail a hoop and leave a curse.
6. Curtail frequently and leave a preposition.

KATHARINE.

Problem.

Put nine sheep in four pens and have an odd number in each pen. How is it done, and how many sheep will there be in each pen?

Answers to Last Puzzles.

NUMERICAL ENIGMA.—"Don't give up the ship."

LETTER CHANGES.—1. Bane: cane, Dane, Jane, mane, vane, wane. 2. Arbor: ardor, armor. 3. Bard: bark, barn, bars, bart.

DECAPITATIONS.—1. Tom, on. 2. Seat, eat. 3. Bray, ray.

NAMES OF TOWNS.—1. Bridge-water. 2. Sun-cook. 3. Spring-field. 4. Sea-brook. 5. Little-ton.

REVERSALS.—1. Reed, deer. 2. New, wen. 3. But, tub. 4. Ton, not. 5. Level, level. 6. Liar, rail.

The Baby's Autograph.

They gave it to me at Christmas—the pretty new autograph album—and I was proud of it; the binding was so gay, and the white, gilt-edged sheets so spotlessly pure. I could hardly make up my mind who should have the honor of dedicating that album, or what verse was grand enough to be inscribed on its pages; and before I had quite decided, baby found it! She had toddled into the parlor and taken it down from the table before I had missed her, and was sitting cross-legged, like a Turk, with the precious book in her lap. That would not have been worth recording, and I should not have valued my album beyond price now if it were all. But she had a pencil—for she dearly loved to scribble on bits of paper—and she had made her mark on the front leaf (the title page of my beautiful book). She had made a dozen marks, criss-cross and zig-zag; and there she sat, her bright hair tossed down over her face, her little demure mouth pursed up, her blue eyes full of mischief, half shy, half defiant, and we three women looked at her.

"Oh, you naughty, naughty baby!" I cried; "you've just ruined my new album, you bad little thing!"

"Bless her dear little heart," said my mother; "doesn't she make a picture?"

"Whip her!" cried Aunt Harriet in a vindictive tone. She has no children of her own, and knows just how to bring up other people's.

I was angry enough to do it, and had made one step forward, intending to wrest the book out of the clasping baby hands, and then—what, beat my own child? I was saved that degradation by my own good mother, who shook her head at me over Aunt Harriet's shoulder.

How long is it since Christmas? Counting by heart-throbs, I would say years! years! It is only a couple of months, and to-day I would give, oh! what would I not give to have those little hands doing their sweet mischief. Peace, foolish heart! "He giveth his beloved rest." The baby is gone, but when I look at the little short lines that dedicate my album—the sweetest, saddest lines to me that were ever written—soon ended like her little life—I am glad that I took her in my arms, kissed her rosebud lips, and put the book away without one reproving word—glad that I caused no angry feelings in that baby heart, or left memories for myself that would now have power to wound.

That is why all the leaves of my new album are blank—pure, spotless, just as the fair page of her little life was; but you, who think these characters on the dedicating page unmeaning, have never had the key to them. Mothers can tell what they are. Angels will be glad over this record without blot or stain. There is no handwriting so fine that I would exchange it for my baby's autograph.

Household Hints

A Cheap and Serviceable Filter.

A cheap and serviceable filter may be made by the following method: Take a large flower pot, or earthern vessel, make a hole one-half inch in diameter in the bottom, and insert in it a sponge. Place in the bottom of the vessel a number of clean stones of sizes varying from that of an egg to an apple. Place upon this a layer of much smaller stones and coarse gravel. Then fill the jar within two inches of the top, with equal parts of pulverized charcoal and sharp sand, well mixed. Place loosely over the top of the jar white flannel cloth, allowing it to form a hollow in the middle of the jar, into which the water can be poured. Secure the edges by tying a stout cord around the outside of the jar. By keeping a suitable vessel under the filter thus made, and supplying rain-water when needed, very pure water can be obtained. It can be kept in a cool place in the summer. It will require to be renewed occasionally by exchanging the old sand and charcoal for fresh. The flannel and sponge must be frequently cleansed.

Such a filter, if allowed to become empty every day, or every other day, at least, ought to last several years. Water which has a distinct odor should never be passed through a filter. Filtration will not purify such water.

The hardness of hard water is not removed by filtration. If a charcoal filter is employed, some of the mineral ingredients of the water will be retained in the filter, but no very considerable proportion. The use of hard water will very soon spoil the best filter made, by the deposit of lime.—*Good Health.*

TO CLEANSE A SOILED CHAMOIS LEATHER.—Many workshops contain a dirty wash leather, which is thrown aside and wasted for the want of knowing how to clean it. Make a solution of weak soda and warm water, rub plenty of soft soap into the leather and allow it to remain in soak for two hours, then rub it well until it is quite clean. Afterward rinse it well in a weak solution composed of warm water, soda and yellow soap. It must not be rinsed in water only, for then it would be so hard, when dry, as to be unfit for use. It is the small quantity of soap left in the leather that allows the finer particles of the leather to separate and become soft like silk. After rinsing, ring it well in a rough towel and dry quickly, then pull it about and brush it well, and it will become softer and better than most new leathers. In using a rough leather to touch up highly-polished surfaces, it is frequently observed to scratch the work; this is caused by particles of dust, and even hard rouge, that are left in the leather and if removed by a clean rougy brush it will then give the brightest and best finish, which all good workmen like to see on their work.

CREAM CAKES.—Delicious cream cakes are made in this way: Boil one-quarter of a pound of butter in one tumbler of water; while it is boiling stir in one tumbler and a half of flour (first wet the flour so it will not be lumpy); let it boil two or three minutes. When it is perfectly cool, add five well-beaten eggs and half a teaspoonful of soda. Drop by spoonfuls on buttered tins and bake for 15 minutes in a quick oven. If you use coal in your range you can have so even a heat that you need not open the door for that length of time, which is an advantage. For the cream, use two tumblers of milk, one and a half coffee cups of sugar, half a coffee cup of flour and two eggs. Beat the sugar, eggs and flour together; flavor with lemon or vanilla. Heat the milk to the boiling point; then stir in the eggs, sugar and flour. When the cakes and cream are cold, cut a hole in the top of the cakes and fill with the cream.

FRENCH HASH.—Mince very fine a teaspoonful of onion, brown it in a tablespoonful of butter, stir in a tablespoonful of flour and let that brown; then add a pint of gravy, broth, or water, and cold beef cut in small thick slices; season with salt and pepper, and heat it; draw the pan to the side of the fire, and stir in the yelks of two raw eggs and a glass of sherry or Maderia wine, and serve the hash at once; toast may be placed under the hash.

FRIED BREAD PUDDING.—Cut cold bread pudding in small slices half an inch thick, dip them first in powdered crackers or cracker dust, then in beaten eggs, and again in cracker dust, and fry them light brown in sufficient smoking hot fat to float them; when they are fried take them out of the fat with a skimmer, lay them on brown paper for a moment to free them from the fat, and serve hot, dusted with powdered sugar.

STEWED VEAL.—Cut your veal in pieces, wash them clean, put them in the dinner-pot, add three pints of water, put in one onion, some pepper and salt, let it stew one hour; then add potatoes sliced, and make a crust of sour milk or cream of tartar, and put in and stew till the potatoes are done, about half an hour; the crust may be made into biscuits. Crumbs of any kind of fresh meat may be used in making a stew.

COFFEE CAKE.—Two cups of flour, one cup of sugar, one cup of fruit, half a cup of molasses, half a cup of butter, half a cup of cold coffee, two eggs, one teaspoonful each of mace, cloves and soda, one tablespoonful of cinnamon. A nice fruit cake may be made by adding more fruit.

Health Column.

Hereditary Disease.

There is, strictly speaking, no such thing. Children are not born diseased (some specific maladies excepted), even if one or both parents are, but they are simply born with a predisposition to such parental malady. They are born with the material, with the powder, but actual disease will no more occur, unless exciting causes are applied, than powder would detonate without the aid of fire. The observant reader has often felt surprised at seeing robust, hearty children, of parents who were seemingly at not a great remove from the grave; and, if rational care were taken of such children, they would live to become healthy men and women. The practical lesson should be, a hopeful diligence in the rearing of children of diseased parentage. The difference between the children of healthy and diseased parents amounts to this: As to the latter, the powder is drier, they have less capability of resisting the causes of disease; the consequence is, a greater necessity for carefulness; this necessity is often felt and practically attended to. The result is, that such persons are found living, scores of years after they have moldered in the grave, who, in priding themselves on having constitutions which nothing could hurt, could not be made to feel the need of carefulness, and, consequently, perished long before their prime.

We have an instructive and royal illustration in point, in the persons of Queen Victoria and her children. Intermarriage with blood relations for ages has deeply impregnated the Guelph family with scrofula. The earlier years of the British Queen were spent in feebleness and disease, and yet she is now the apparently healthy mother of a large family of robust, healthy children, which is at once creditable to herself, and to the medical skill which dictates the hygiene of her household. The daily routine of these children is, to rise early, breakfast at eight and dine at two. First hour after breakfast, the classics; next, the modern, grammatical instruction being also carefully given; next, military exercises for the boys; then music and dancing; then the riding school; music and drawing for the girls; then the carpenter's shop, and, occasionally, the laboratory; then shooting and working in the royal gardens; then supper; then prayers, and then to bed.

Result, high bodily health, in spite of ages of *"hereditary tendencies"—Hall's Jour. of Health.*

Instructions by Which We May Keep from Drowning.

The human body weighs a pound in the water, and a chair will carry two grown persons. That is, it will keep the head above water, which is all that is necessary when it is a question of life or death. One finger placed upon a stool or chair, a small box, or a piece of board, will easily keep the head above water, while the two feet and other hand may be used as paddles to propel toward the shore. It is not at all necessary to know how to swim to be able to keep from drowning in this way. A little experience of the buoyant power of water, and faith in it, is all that is required. We have seen a small boy, who could not swim a stroke, propel himself back and forth across a deep wide pond by means of a board that would not sustain five pounds' weight. Children, and all others, should have practice in the sustaining power of water. In nine cases out of ten, the knowledge that will sustain a pound weight is all that is necessary to keep one's head above water, and will serve better in emergencies than the greatest expertness as a swimmer. A person unfamiliar with the buoyant power of water will naturally try to climb on top of the floating object on which he tries to save himself. If it is large enough, that is all right. But it is generally not large enough, and half of a struggling group is often drowned in the desperate scramble of a life and death struggle to climb on top of a piece of wreck or other floating object, not large enough to keep them all entirely above water. This often happens when pleasure boats capsize. All immediately want to get out of the water on top of the overturned or half-filled boat, and are all drowned except those whom the wrecked craft will wholly bear up. If they would simply trust the water to sustain .99 of the weight of their bodies, and the disabled boat the other hundredth, they might all be saved under most circumstances. An overturned or water-filled wooden boat will sustain more people in this way than it will carry. It would keep the heads above water of as many people as could get their hands on the gunwale. These are simple facts, easily learned, and may some day save your life.

COPPER IN BREAD.—The author concludes that wheat normally contains copper to the extent of eight to ten parts per million. He has experimented with grain, the seed of which had not been "pickled" with sulphate of copper (as is often done to prevent smut), and has satisfied himself that the copper was not due to any impurity in his reagents, or to the gas pipes and burners.—*Jules Van Dens Berghe.*

POISONOUS COSMETICS.—A young lady recently died in Boston from poisoning with cosmetics containing lead. Such cases are not rare. It is time we had a law against the manufacture of such articles.

Worth Knowing.

A NOISY MONKEY.—One of the most extraordinary and the largest of all the monkey tribes found in America is the "howler monkey," so called from the loud voice of the males. A. R. Wallace, in the *Popular Science Monthly* for May, alludes to this animal as follows: Often in the great forests of the Amazon, or Orinoco, a tremendous noise is heard in the night or early morning, as if a great assemblage of wild beasts were all roaring and screaming together. The noise may be heard for miles, and it is louder and more piercing than that of any other animals, yet it is all produced by a single male howler sitting on the branches of some lofty tree. They are enabled to make this extraordinary noise by means of an organ that is possessed by no other animal. The lower jaw is unusually deep, and this makes room for a hollow bony vessel about the size of a large walnut, situated under the root of the tongue, and having an opening into the windpipe by which the animal can force air into it. This increases the power of its voice, acting something like the hollow case of a violin, and producing those marvelous rolling and reverberating sounds which caused the celebrated traveler, Waterton, to declare that they were such as might have had their origin in the infernal regions. The howlers are large and stout-bodied monkeys with bearded faces, and very strong and powerfully grasping tails. They inhabit the wildest forests; they are very shy, and are seldom taken captive, though they are less active than many other American monkeys.

DANGER FROM OILED FLOORS.—The dangers attending oiled floors and seats in public buildings appear to have been illustrated in the recent destruction of Walker hall, one of the Amherst college buildings, whose floors had been oiled only the day before. The danger is not so much in saturating the woodwork, but in the waste used in performing the operation, which careless workmen are liable to leave behind them. The Springfield *Republican*, in speaking of this fire, relates, also, another instance: That some years ago, contractor Johnson, who built the Northampton First church, and many other similar edifices in the Connecticut valley, "had an impression" one evening that something was not right about a church he was finishing, the pews of which the workmen had been oiling that day; so he went to the building and unlocked it to find that flames were just breaking out near the entrance of the audience room. When one of the men left work at six o'clock he laid the piece of cotton waste, which he had been using, on the rail of the last pew, and the result was spontaneous combustion in three or four hours.

A PUBLIC LIBRARY WITHOUT NOVELS.—In Germantown, a part of the suburbs of Philadelphia, there is a free library of 10,000 volumes without a novel in it. When the librarian was asked, "Why don't you keep novels?" he replied: "Because we hold that it does harm to our young readers. Fully one-half of those that come here are young folks. Novels, at that period, are not the things for them. We hold that their minds should be led to take up some more wholesome reading—books on travels, or natural history, or biography—something that will amuse and instruct together." "Is there any dissatisfaction because you have no novels here?" "No, we have from 400 to 600 visitors a week, and they increase every year. We have books on all sorts of trades—architecture, engineering and carpentering. We find these books are a great deal read, and have not the least doubt as to their usefulness."

MUCILAGE.—Persons are often at a loss for a very strong mucilage, having sufficient power of tenacity to fasten sheets of pasteboard together. The following cement is recommended by a scientific authority: Melt together equal parts of pitch and gutta percha. To nine parts of this add three parts of boiled oil and one-fifth part litharge. Continue the heat with stirring until a thorough union of the ingredients is effected. Apply the mixture hot, or somewhat cooled, and thinned with a small quantity of benzole or turpentine oil.

CEMENT.—Lovel, in Paris, has patented a method for the manufacture of cement, by mixing magnesia with the crystallized sulphate of magnesia and moistening the mixture with water, also by mixing the magnesia with a solution of the sulphate of magnesia.

A SIMPLE precaution, costing neither money nor labor, is said to increase the durability of posts put in the ground by 50%. This is simply by taking care that the wood is inverted, *i. e.*, placed in the opposite direction to that in which it grew.

HIGHT OF THE ATMOSPHERE.—Dr. A. Kerber has estimated the hight of the atmosphere from the phenomena of refraction. By two different methods he obtains hights of 189 and 192.6 kilometers (117.4 and 119.7 miles).—*Wied. Annal.*

THE last vestige of the toll nuisance in the Yosemite valley has been wiped out; the Yosemite Commissioners have purchased the trail leading to Eagle Point, at their recent meeting.

DISINFECTANTS.—"What is the action of disinfectants?" was asked of a medical student. "They smell so bad that people open the door, and fresh air gets in," was the reply.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "good of the Order."

Unity, 27.

The forces of Unity, No. 27, came to the front in large numbers on Tuesday evening, June 27th, there being over 150 in attendance. There were six applications, one received the J. W. degree, five were given the M. W. degree and one member was admitted by card. Unity has over 250 members, and the oracles of this thriving Lodge feel confident that they will pass the 300 mark during next term. This term has been a very prosperous one, and the efficient M. W., A. Montgomery, has proved himself one of the very efficient and worthy officers who have presided over and helped to make this honored and efficient subordinate.

Valley, 30.

The end of the term was fittingly closed by Valley, No. 30, with their large hall completely filled, receiving one petition and conferring the M. W. degree on 13 candidates, which swells the membership to 888 Master Workmen in good standing. The several officers of this Lodge have a good reputation for correctness in the work, and on this evening it was certainly worthy of this grand and thriving subordinate. Bro. H. S. Dearborn has proved himself worthy of the responsible and honored position he has occupied as the Master Workman of the largest Lodge of Workmen in this jurisdiction. Bros. Jas. M. Camp, as Financier, Chris. Waller, as Receiver, and A. G. Lyle, as Recorder, have held their respective positions continuously for a number of years, and perform their duties as well as any team in this jurisdiction. One of the new Lodges in Salt Lake City was named Valley, No. 2. The compliment coming to the notice of our brethren here, a beautiful ivory gavel, gold mounted, on which is engraved, "Presented to Valley Lodge, No. 2, A. O. U. W., Salt Lake City, Utah, by Valley Lodge, No. 30, A. O. U. W., San Francisco, Cal.," was forwarded to them with a complimentary letter. E. F. Loud, Deputy Grand Master, was the committee appointed to carry out the wishes of Valley, No. 30. This meeting was closed with the announcement that there was not one member who was delinquent on assessment No. 10, after which Deputy McKay and a number of the leading brethren of Valley, indulged in facetious and complimentary speeches for a short time.

Magnolia, 41.

This very thrifty subordinate is gaining in membership and holding very large and pleasant meetings. The fourth anniversary party, to be held at B'nai B'rith hall, on the 12th instant, promises to be one of the grandest affairs of the season. The invitation tickets that are out are of the finest design.

District Meeting in Myrtle, 42.

District Deputy Thompson held a district meeting on Saturday evening, June 18. A large number of visiting brethren were present, and a delegation, who attended in a body, from Noe Valley Lodge.

Burns, 68.

About 25 members of Burns Lodge, No. 68, A. O. U. W., visited Los Gatos, Saturday evening, June 11th, remaining until Sunday morning, devoting one-half of the night to dancing in Lyndon hall, and the other half in hunting for a little bed. The people of Los Gatos, as we understand it, had no instruction to secure accommodation, except music and a hall for dancing, and it so happened on the night in question that all our hotels and lodging houses were full, and our San Francisco friends were forced to walk the streets of our picturesque village, reveling amid the solitudes of sleeping nature and "cussing" the slow approach of daylight. We understand that, on the same night, all the hotels in Los Gatos were full. Brethren of Burns Lodge, on last Sunday morning how many were there of ye of which the same might be said?—*Los Gatos Weekly News.*

Sts. John, 73.

This modest, solid and conservative subordinate, though not as large as many of our city Lodges, is, in many respects, equal to, if not ahead, of any Lodge of Workmen in the State. Sts. John has been blessed with a line of very able and efficient men as Master Workmen. The present M. W., R. J. Fletcher, has proved himself one of the most efficient and useful members that have had the honor to hold the gavel since its organization. The present term has been a very prosperous one, with an increase of 10 members, a number of whom are our leading business men. Wm. B. Marshutz, P. M. W., has held office for over seven consecutive terms, and is considered a model Recorder. Bro. Smythe, as Financier, has gained an enviable reputation as a careful, correct and accommodating officer.

Excelsior, 126

Excelsior Lodge, No. 126, was visited on Thursday night, June 15th, by a large delegation of her sister Lodges, no less than eight Lodges being represented, viz., San Francisco, Unity, Yerba Buena, Spartan, Franklin, Hercules, Fidelity and Memorial. Whatever Excelsior Lodge has done heretofore to entertain visitors, she fairly outdid, on this night, all former occasions. Business was dispatched without a break until "Good of the Order" was reached, when the Master Workman called upon the Entertainment Committee—if they were ready with a report, to hand it to the Master Workman. The report being presented, the Master Workman, with as much freedom as though it were an every-night affair, announced the first thing on the programme as a piano solo by the Brother Organist of the Lodge; next an address of welcome to the visitors by Bro. White; then a song by Bro. Clark; then a reading by Bro. Poland, followed by a beautiful trio by Bro. Booth, Bro. Clark and Bro. ———; next a humorous recitation by Bro. Howard, a piano solo by Bro. Pierce, a reading by Bro. Booth, and another song closed the formal programme, after which the Master Workman called upon several of the visiting brethren to complete the evening entertainment. Bro. Danforth, of Spartan, Bro. Reading, of Fidelity, Bro. Veasey, of Hercules, Bro. Brud, of San Francisco, Bro. Gyselaar, of Memorial, and Bro. Payson, of Franklin, briefly replied. Bro. Reading made the boys feel good when he told them the Supreme Lodge had endorsed the Supreme Master, Bro. Baxter, in suspending the charter of Iowa for disobedience of the law; but when he announced that the Supreme Lodge had re-elected Bro. Baxter Supreme Master for another year, the Lodge resounded with long and continued applause. Excelsior Lodge has added another credit to her long list, but none more pleasant, instructive and entertaining than the one to which we have just referred.

Olympic, 127.

At the meeting of Olympic Lodge Tuesday evening, June 20th, one applicant was initiated in both degrees, officers were nominated, and the following resolutions were adopted. It was also announced that Bro. A. McIntire, Captain of the schooner *St. George*, had probably been lost, together with all on board, as the wreck of the schooner had drifted ashore off Puget sound, where she had been engaged in lumbering. WHEREAS, It is with feelings of sorrow and regret that this Lodge has learned of the sudden death of Brother James Brooks, one of the charter members of the lodge, and WHEREAS, Knowing that his unexpected death, coming as it did, makes the bereavement more keenly felt by his family and friends; therefore, be it *Resolved*, That our sincere and heartfelt sympathies be extended the widow and family of our deceased brother in their loss, with the hope and trust that He who ordains all things wisely will comfort and cheer them in this, their hour of trial; and be it further *Resolved*, That the charter of the Lodge be draped in mourning for 30 days, and also that these resolutions be spread on the minutes of our Lodge, and a copy of the same be sent the widow of our lamented brother.

Lodge Locals.

Enterprise, 19

We visited this old pioneer on Monday evening, June 19th. The founders of this Lodge have always been in the foremost rank in promoting this grand organization. As an instance of their work, in the early history of Los Gatos Lodge there was a disposition to surrender the charter. The members of Enterprise, to give encouragement to them, visited them in a body and prevailed on them to "hold the fort." It is expected that they will soon have 300 members, and a large number of leading citizens of San Jose and vicinity hold their membership in this Lodge. The A. O. U. W. hall has been lately renovated, repainted and kalsomined, and presents a very attractive appearance. There was not a large attendance on this evening, but, as usual, there was work on hand, and the J. W. degree was conferred on two candidates.

Santa Cruz.

On Monday evening, June 11th, the brethren of Santa Cruz met in their cosy hall, on Pacific avenue, and transacted their business with care. After which the J. W. degree was conferred on three candidates of the class and material to successfully build up our Order. Two petitions were received from prominent citizens for membership, one of whom was a recruit of District Deputy Danforth, while visiting Santa Cruz. One application by card was received. Santa Cruz Lodge is in a flourishing condition and the members are expecting a large accession to their circle this year.

Mt. Hamilton.

We had the pleasure of visiting Mt. Hamilton on Wednesday evening, June 21st. The J. W. degree was conferred on four candidates, and the M. W. on one. As a cabinet of officers, with the efficient M. W., Wm. Osterman, Mt. Hamilton has no superior in this jurisdiction. There was a very good attendance and several distinguished visitors present. J. T. Rogers, Grand Foreman, in his interesting and eloquent manner, said: "In my youthful days I gathered education in your schools, and, with the exception of meeting the brethren of A. O. U. W. in their first Grand Lodge, I have not visited this peerless city since. This grand organization I love, it fills a great want of the age, combining true fraternity and material assistance with no uncertain sound. Grand as our old fraternal organizations may be, there was a void, and that want has been filled by the Ancient Order of United Workmen. It is like your electric light, high above all others, and I hope its light will not fade, but grow brighter. If we are cautious, and not over zealous in trying to create members without guarding well the social, moral, and especially the physical condition of our members, we shall become the grandest fraternity that has ever blessed humanity. There were quite a number of visitors present from different parts of this jurisdiction. We met J. N. Prather, P. M. W. of Sts. John Lodge, who has taken up his residence in the Garden City. The nominations for office were quite numerous, and a spirited election is anticipated.

Magnolia, D. of H.

On Tuesday evening, June 20th, our bright sister of San Jose, Magnolia, D. of H., held her regular meeting. There was a good attendance, principally our sisters. It being during the week of holding a political convention was an evident reason for so few of our Bros. being present. Three candidates were elected to receive the degree, one of whom was the Mayor of San Jose. One candidate was given the degree in a very pleasant and dignified manner. Sister Potts, W. S. of H., has a happy faculty as a presiding officer, and with the able assistants Magnolia, D. of H., of San Jose, is one of our brightest sisters.

Insurance.

Every prudent man should provide a protection of life insurance for those who are dependent on him. That the majority of Life Insurance companies have proved a delusion and a swindle is admitted by them, and the record of their extortions and deceptions is one of the darkest pages in the history of our country. There are exceptions, and without solicitation or request on the part of the New England Life Insurance Co., we publish this record:

OROVILLE, BUTTE CO., CAL., March 30, 1882.

Henry K. Field, General Agent New England Mutual Life Insurance Co.—DEAR SIR: Samuel J. Davis, ex-County Treasurer of Butte county, died at this place Jan. 3, 1882, leaving a widow and six small children. He left nothing for their support except the insurance on his life. He was a member of Oroville Lodge, No. 40, A. O. U. W., and his wife received from that Lodge $2,000. He also held a policy for $2,500 in the company you represent, on which he had paid no premium for two years, and which was believed to be worthless. However, on making inquiries of you, we found that the policy was on the non-forfeitable plan of the New England Mutual Life Insurance Co., and although the premiums had not been paid for some time past, yet the policy was good for $2,418 87, which sum Mrs. Davis has already received. This is a correct statement of the facts in this case, and it speaks louder in praise of the company you represent than any other words we can use. Mrs. Davis has the money, it was paid promptly and with little expense to her, and it all came from a policy that was believed to be worthless. If coin "talks," it certainly should in this case, for she has it, and it came with the greatest possible dispatch. Very truly yours,—John C. Gray, Past Master Workman, Oroville Lodge, No. 40, A. O. U. W.; Wm. Schneider, Past Master Workman, Oroville Lodge, No. 40, A. O. U. W.; Archie McNiel, Past Master Workman, Oroville Lodge, No. 40, A. O. U. W.; E. Higgins, Past Master Workman, Oroville Lodge, No. 40, A. O. U. W.; L. A. Simon, Master Workman, Oroville Lodge, No. 40, A. O. U. W.; George B. Springer, Recorder, Oroville Lodge, No. 40, A. O. U. W.; R. De Lancie, Treasurer, Butte county; P. O. Hundley, Judge of Superior Court, Butte county.

BY copartnership notice elsewhere, it will be observed that Messrs. S. Stoll and J. S. Thayer have become associated in the news agency business at the old stand, No. 9 Spring street. Mr. Stoll has been engaged in the business in this city for over 11 years, and Mr. Thayer has been in his employ the past six years, attending to his duties with a characteristic fidelity which has verified the old adage, "Virtue is its own reward." It is a good team, and will doubtless merit a continuance of the liberal patronage extended to the old firm.—*Los Angeles Daily Times.*

AT the recent session of the Supreme Lodge, A. O. U. W., Wyoming Territory was added to the Grand Lodge jurisdiction of Nevada, which now comprises Utah, Idaho and Montana. Whenever the jurisdiction shall have a membership of 2,000 they are set apart as a separate beneficiary jurisdiction (paying only their own death losses). As this is the healthiest Territory in the country, the assessments necessarily will be less than of any jurisdiction in the United States.

IT is estimated in a recent German work that the total population of the world reaches 1,455,000,000, being an increase over the last census of more than 16,000,000.

DEATHS.—The number of deaths in the Order in Ohio for the past fiscal year was 55; Pennylvania, 103; New York, 111; Illinois, 74.

BRO. ALEX. MACKEY, one of our oldest and most reliable carpet and upholstery houses, has now a very fine and well-selected assortment in his line, which he is selling at the lowest rates. The writer speaks from personal experience in recommending this house, at 715 Market street, as one of the best places in this city to procure an outfit.

THE California Washing Machine, manufactured by Bro. Geo. M. Pursell, at 431 Fourth street, San Francisco, is growing in favor each year. It saves time and money. It is the best and cheapest washer made. Parties wishing this labor-saving machine can take one on trial, and have satisfaction guaranteed, or no sale.

Self Destruction.

EDITORS WATCHMAN:—Under the above caption, I find in your editorial columns of June 15th your remarks in reply to the *Canadian Workman*, on the subject of "Suicides" in our Order. From your criticism, it would appear that you were in favor of the Order continuing to pay death losses on this class of mortality. Hence, you would maintain the affirmative of the following proposition, viz.: That the Order is morally obligated to pay death losses on suicides. If so, on this proposition I maintain the negative. Might it not be for the "Good of the Order" if you were to bring out a few of your select arguments in favor of your position, and then allow me equal space to present the other side? True, I might not possess the ability to make it interesting to you, but, with your aid, we might make it interesting to your readers.

In view of this possibility, please allow me a few suggestions on the little editorial referred to.

You admonish the Workman to "recollect that the A. O. U. W. has a lofty mission—to disperse the gloom and bring gladness and plenty to homes that have just been darkened," etc. True, Bro. WATCHMAN, but is it the "lofty mission" of our Order to invite homes to become thus "darkened," to offer a member of the Order a premium to thus darken them? I think not; and if not, it is filling no part of the "lofty mission" of this Order to obligate itself to pay a premium to a man, or his legatee, who willfully takes his own life. Does not this remark involve what Hamilton calls *petitio principii*? That this is the "lofty mission" of the Order is, I apprehend, the point yet to be proven. It cannot be assumed. You add, "Under the roof which veils the future, present and the past, there is no man who knoweth what a day may bring forth," etc. True, again, in point of fact, but erroneous in application. If I mistake not, it is Blackstone who defines suicide as "The act of designedly destroying one's own life, committed by a person of years of discretion and sound mind; self murder."

If, then, the "act" is "designedly" performed, may not his initiation in our Order have been a part of that design; and if so, was there not fraud in the very contract? And a "contract based on fraud is vitiated in law," as well as in morals. Then, again, the man of "sound mind," who "designedly destroys his own life," after acceptance in the Order, knows well what the act "and the day will bring forth." He well knows that under existing arrangements the "day will bring forth" from the treasurer of the A. O. U. W. $2,000 in favor of his, voluntary on his part, bereaved—no, blessed family—blessed to be relieved of a head that lacked the moral courage to face the ordinary conflicts of life in their behalf. Now, is it just to the Order to place a premium on that species of cowardice?

If it is true "that men never can be just to God who are unjust to men," and they never can be just to men who are unjust to themselves, then, justice to ourselves, to our families, to each other and our God, demands protection from this kind of suicidal injustice.

You add: "When the Angel of Death closes the door of this life upon us, and gives the keys into the hands of the Angel of the Resurrection, who shall say it was unjust." No one, forsooth! But does this imply that there is no difference between the action of the "Angel of Death," on one hand, and our arriving at the "years of discretion," being of "sound mind," and yet "designedly destroying our own life," on the other? Or is our action in such a case the "Angel of Death," inviting to Elysian fields beyond, and for the acceptance of which the A. O. U. W. pays $2,000? It would seem so. You then ask: "Is the heart-broken mother to blame, or the weeping wife or sorrowing friends?" Why, of course not. But are the A. O. U. W. to blame that they should be taxed $2,000 because some indolent or cowardly wretch saw fit to rob God of what He alone could give—his family of their natural provider and the Order out of $2,000, often wrung out from self denial, penury and want?

If the Order may not say: "No despairing mortal shall join our ranks," may not the Order, in justice to itself, say "No despairing mortal who 'designedly' takes his own life shall dispose of $2,000 of our money for the performance of the act." Hence, it may say that suicide shall work a forfeiture of a policy, as other and older organizations have done. And by apprising the applicant of that fact prior to his initiation, thus making it a part of the contract. No injustice is done the individual, while the Order is protected in its financial resources. I am, dear brothers, yours in C. H. and P.,

J. A. MILLER, M. D., D. D.
P. M. W. of Oakleaf Lodge, No. 35.

SWAIN'S bakery and dining saloon, No. 636 Market street, of which Bro. C. E. Pearson is the popular manager, is the favorite resort for families and the elite of this city. A specialty is supplying parties and families with wedding cakes, ice cream, oysters, etc.

BRO. J. N. PRATHER, P. M. W. of Sts. John Lodge, No. 73, who is well and favorably known in his profession as a skillful dentist, has removed to San Jose, and opened an office over Commercial bank, corner Santa Clara and First streets.

Supreme Lodge.

First Day.

The Supreme Lodge, A. O. U. W., met in 10th annual session at Odd Fellows Temple, Cincinnati, June 6th. Supreme Master Workman W. H. Baxter called the Lodge to order at 10:45. Representatives were present from all the Grand Lodges, 21 in number, including the Iowa Grand Lodge and that of Ontario, Canada. On the roll being called, 38 Representatives were found present, including the following officers: Wm. H. Baxter, S. M. W.; M. W. Fish, S. F.; Theo. A. Case, S. O.; M. W. Sackett, S. Rdr.; S. S. Davis, S. R.; R. H. Flanders, S. G.; R. M. M. Patton, S. W.; Supreme Trustees—Leroy Andrus, Alex. McLean and John D. Vincil; Laws and Supervision—John Frizzell, C. M, Masters and S. B. Myers; Finance—J. H. Lenhart and M. D. Dawson.

In absence of P. S. M. W. Roderick Rose, Bro. S. B. Myers was appointed to fill his place.

The Supreme Master Workman's report, the Supreme Recorder's, the Supreme Medical Examiner's and the Finance Committee's reports were received and referred to the Committee on Distribution.

The following resolutions were adopted: 1. That the Supreme Recorder be allowed to appoint two assistants for this session; compensation for the same to be $3 per diem. 2. That the Finance Committee be authorized to make a contract for the printing of the daily journal of the proceedings of this body with the party submitting the lowest bid, which is $1.80 per page.

From the Finance Committee's report it appears that the death record for the past year has been so heavy that, after making two assessments per month, the maximum for the Supreme jurisdiction, 10 claims remain unprovided for, amounting to $20,000, for which they were compelled to make application to the Relief Board.

A lengthy report from the Committee on Credentials, advising the admission of the Iowa delegation from the new Grand Lodge, was adopted. A great many resolutions were introduced and referred to proper committees. Adjourned to nine A. M. Wednesday.

Second Day.

The Supreme Lodge was called to order at nine A. M, S. M. W. Baxter in the chair. After prayer the Lodge was formally opened. The roll being called, 45 Representatives answered to their names, including all officers and standing committees.

It was announced, after some business had been dispensed with, that J. J. Upchurch, the founder of the Order, was in waiting in the ante-room, and Past Supreme Master Workmen S. B. Myers, of Pennsylvania, and John Frizzell, of Tennessee, were appointed to introduce the venerable father of the United Workmen. It was the second time that he had been permitted to visit this Supreme Lodge since its existence, and it was with the warmest brotherly feeling that he was received. Past Supreme Master Workman S. B. Myers, introduced him in very appropriate terms, which was feelingly replied to by Past Supreme Master J. J. Upchurch.

The Supreme Master Workman announced that he had received a telegram from Past Supreme Workman Rose, regretting that he could not be present this session to take his position, and tendering his resignation.

On motion of Supreme Trustee J. D. Vincil, Past Supreme Master John Frizzell, of Tennessee, was unanimously elected to fill the vacant position.

The following resolutions were offered and adopted:

1. That the claims of the jurisdiction of Oregon and Washington be referred to the Committee on Laws and Supervision for investigation.

2. That the Supreme Lodge go into secret session at 11:30 to-day.

3. That the unwritten or secret work of the Order be exemplified during the present session.

4. Several amendments were made to the Constitution and laws, and several invitations to visit different Lodges, including the Grand Lodge of Ohio, were received and accepted.

Rep. Wood presented the following resolution, which was adopted:

WHEREAS, We, the members of the A. O. U. W., owe to Bro. J. J. Upchurch a debt of gratitude that we can never repay, and

WHEREAS, It gives great satisfaction to the members of the Supreme Lodge to greet him at its sessions, therefore be it

Resolved, That Bro. J. J. Upchurch be invited to visit this Supreme body, and that he be entitled to milage and *per diem* for his attendance at all sessions of this Supreme Lodge.

R. W. WOOD.
E. ELMORE.
WM. H. JORDAN.

S. S. Davis presented the following statement with reference to the Upchurch fund: Receipts, $3,912.27; paid to J. J. Upchurch at various times, $3,912.27. Of this amount California furnished $1,010.10—over three times as much as was furnished by Pennsylvania, and over twice as much as was furnished by New York.

The Supreme Lodge then went into secret session for the purpose of exemplifying the secret work. Adjourned till nine A. M. Thursday.

Third Day.

The Supreme Lodge was called to order at 9 A. M., Supreme Master Workman Wm. H. Baxter in the chair. Resolution was adopted abolishing the Supreme Lodge degree.

The election of officers was then proceeded with. Wm. H. Baxter was re-elected unanimously to the position of Supreme Master Workman. The other officers were all re-elected by acclamation.

The laws were amended with reference to suspensions and amendments. With reference to the age limit, a resolution was adopted, providing for the continuance of those who have already been granted beneficiary certificates and who were over 50 years of age at the time of joining, providing they made no false statements in regard to their age, but that no person shall be admitted from and after the adoption of this resolution.

The Committee on Medical Examinations submitted an extended report, in which they called attention to the remarks of the Supreme Medical Examiner on saloon keeping, railroading and practicing medicine, and recommended that Medical Examiners scan very thoroughly the physical, social and moral qualifications of applicants from these classes.

The Committee on Laws submitted the following:

Art. VIII, Sec. 10.—Any beneficiary certificate suspended by reason of non-payment of assessments thereon may be renewed, if the member be living, at any time within a period of three months from the date of such suspension, upon the following conditions, and none other; that is to say: 1. All assessments that have been made during that time shall be paid; 2. This fact shall be reported to the Lodge at a stated meeting; 3. The Lodge shall, by a majority vote, declare said certificate renewed. When all these conditions shall have been complied with, the beneficiary certificate shall be held as renewed and in full force, and not before.

The yeas and nays being ordered, resulted as follows: Ayes, 104½; nays, 21⅝—New York casting five votes in the affirmative.

A two-thirds vote having been obtained, the report of the committee was adopted.

A tribute of respect was paid to the memory of Bro. S. J. Pecot, and the Lodge adjourned to meet at 9 A. M. Friday.

Fourth Day.

Supreme Lodge was called to order at 9 A. M., S. M. W. Wm. H. Baxter in the chair. Lodge opened with prayer by the Rev. John Brooks, of Missouri. The roll being called, 55 Representatives were found present, including all officers and members of standing committees.

The report of the Committee on State of the Order was then received. It sets forth the belief that public installations could never do the Order any harm, and would be in many cases beneficial. Also, that consolidation in the matter of small jurisdictions is advisable. In pursuance of which belief, resolutions were offered and adopted by the Supreme Lodge. The Committee on Laws and Supervision presented a report recommending changes regarding the maximum rate of assessments.

Representative Sessions offered amendments to Sec. 3, Art. IX., which were adopted after amendment, causing it to read as follows:

Section 3. The following maximum annual rate of assessments is established for the several jurisdictions of the Order, that is to say: Iowa, 22; Michigan, 22; Minnesota and Dakota Territory, 22; Maryland, New Jersey and Delaware, 24; Wisconsin, 22; Ontario, 22; Kansas, 22; California, 24; New England States, 24; Illinois, 24; Indiana 28; New York, 24; Pennsylvania, 24, Oregon and Washington, 24; Nevada, Utah, Idaho and Montana, 22; Missouri and Nebraska, 26; Georgia, Alabama, Florida, Mississippi, North Carolina, South Carolina, Florida, Mississippi, North Carolina, South Carolina, and District of Columbia, 28; Kentucky, 28; Ohio, 28; Tennessee, 28; Virginia and West Virginia, 26; Supreme jurisdiction 24; Texas and Louisiana, 28; Colorado, Arizona and New Mexico, 28; Wyoming, 30.

The maximum rate for other jurisdictions, which may from time to time be established, shall be fixed by the Supreme Lodge or the Supreme Lodge Relief Board, herein provided for, as such jurisdictions may be established.

The Special Committee on the Bean and Rahl's case presented a majority report disallowing the claims, but recommending their payment, which report was adopted.

Adjourned to 8 P. M.

EVENING SESSION.

The Supreme Lodge met in evening session, at 8 P. M. Business of the evening, consideration of report of Committee on Laws and Supervision. On motion, the Lodge took a recess till 9 o'clock Monday morning.

Fifth Day.

Supreme Lodge called to order at 9 A. M., Wm. H. Baxter, Supreme Master Workman, in the chair.

After prayer the roll was called and 43 Representatives answered to their names.

A resolution was passed forbidding the incorporation of Grand Lodges without the approval of the articles of incorporation by the Supreme Lodge.

A resolution, introduced by Rep. Keller, providing that five members shall constitute a quorum in subordinate Lodges, was adopted. The committee, to whom has been intrusted the consideration of the graded assessments plan, reported in favor of appointing a Committee on Vital Statistics, whose duty it should be to secure reliable data upon which to base some conclusion. Wilson, of Michigan, and Supreme Trustee McLean were appointed as such committee.

A resolution was adopted appropriating $600 to W. H. Baxter, in consideration of his valuable services during the past year.

A report from the Committee on Ritual, Barnes, of California, Chairman, was received, recommending that a committee of three be appointed to revise the Ritual and submit the same to the Supreme Master Workman, who should, if he approved it, promulgate the same to Subordinate Lodges; amended so as to have report of committee considered by the next Supreme Lodge. Committee appointed, Barnes, Beebe and Sessions.

Resolutions were adopted permitting public installation of officers.

Thanks of the Supreme Lodge were tendered to Wm. H. Baxter for his eminent services during the past year.

The Committee on Degree of Honor, Pratt, of California, Chairman, reported, as instructed, a Constitution and general laws for Degree of Honor Lodges; also,

Resolved, That separate beneficiary jurisdictions may attach a beneficiary feature to Degree of Honor Lodges, in accordance with the Constitution and laws.

Jordan, of California, introduced the following, which was adopted:

Resolved, That a special committee be appointed to report an address to the Iowa brothers.

A resolution was also adopted, providing for the printing of the proceedings and amendments to the Constitution and laws—also a revised edition of the Digest—at the earliest possible time, and in sufficient quantity to supply all officers and committeemen of the Order.

Representative Ford, of Kansas, introduced a resolution approving of the Select Knights, which was adopted. The officers for the ensuing year were then installed, and the Supreme Guide conducted them to their places. Standing committees were then appointed as follows: Finance and Mileage, J. H. Lenhart, Pa.; M. D. Dawson, Ontario; S. B. Berry, Ohio. Laws and Supervision, John T. Frizzell, Tenn, C. M. Masters, Wisconsin, Sam B. Byers, Pa.

There being no further business, the Supreme Lodge adjourned, to meet in Buffalo the first Tuesday in June, 1883.

Memorial Lodge Anniversary.

The second anniversary of the organization of Memorial Lodge, 174, took place in Fraternity hall, Shiels' building, on Monday night, June 12th, and drew one of the largest audiences we have seen, the hall being literally packed, and hundreds unable to gain admission. The entertainment commenced by a few words of welcome by the Master Workman, after which a piano duet by Bro. Charles Hoffman was skillfully performed, and which elicited much applause. A song by C. L. Gage was well and effectively rendered, as was also a performance on the piano and violin by Master Albert and Miss Hattie Rademaker. A vocal duet by Misses Eva and Marietta Jacobs evoked a hearty encore, which was gracefully responded to.

Bro. E. M. Reading was then introduced and proceeded to deliver a most excellent address on the history of fraternal societies, which was attentively listened to and frequently applauded. The subject of Brother Reading's address was exhaustively treated, showed evidence of much study and a perfect familiarity with ancient and modern fraternal societies, which was appreciated by the crowded audience and loudly applauded at its close.

A vocal duet by Mrs. L. Georges and C. Fallenius was received with a well-deserved recall. Prof. Eastman followed with a recitation, "Creeds of the Bells," which was a fine elocutionary effort. "Our Jack's come home to-day," a song by Bro. C. E. Baker, was heartily encored. Mr. Putnam gave a comic recitation, after which the Chairman, in a few complimentary remarks on behalf of Memorial Lodge, presented Bro. Reading a vote of thanks for his able address. The audience was then requested to rise and join in the closing of one of the most enjoyable and successful entertainments of the season by singing to the tune of "Sweet Bye and Bye" the following ode:

Gracious Father and Giver of good,
Whose eternal protection we own;
Now unite us in strong Brotherhood,
And to each let thy favor be shown.

CHO.:—We will stand for the right,
Never fearing to dare and to do,
We will stand for the right,
Faithful workmen, united and true.

Unto Thee for Thy guidance and care,
In a song shall unite every voice;
All Thy blessings unnumbered we share,
And in Thee every heart shall rejoice.

CHORUS:—

Let Thy presence attend as we part,
Our Protector and Guide ever be;
In Fraternity join every heart,
And forever unite us to Thee.

CHORUS:—

WESTON'S home-made bread, at No. 9 Stockton street, is growing in popularity, and the demand for it is immense. Connected with this leading bakery is a family restaurant that is patronized by the best society.

Election of Officers, A. O. U. W.

SAN FRANCISCO, No. 4, S. F.—Daniel C. Breed, P. M. W.; Geo. W. Crawford, M. W.; F. F. Smith, F.; G. Mosebacher, O.; W. P. English, Rdr. (re-elected); J. Blumenthal, Fin. (re-elected); N. P. INSURANCE.—Now that the season has arrived when the farmers will, to a large extent, insure their growing grain and buildings, we call attention to the Ætna Insurance company, of Hartford. Its record is without a parallel in this country. Organized in the year 1819, with a capital stock of $150,000, its assets had reached over $6,000,000 in 1871. Three million seven hundred and sixty-six thousand four hundred and twenty-three dollars were contributed to rebuild Chicago, a larger amount than any fire insurance company has sustained since the world began. To-day its cash capital is $4 000,000, and its assets (exclusively fire) are $8,902,272. Fair dealing and absolute security are offered by this old company, and paid at one time. Bro. S. T. Dodson, P. M. W. of Santa Cruz, No. 46, has been appointed traveling agent, and will visit different portions of the State during the summer. He is an enthusiastic Workman, and very entertaining in the Lodge meeting as a speaker.

BRO. H. W. FAUST has just published the "People's Map and Guide of San Francisco," and business directory of this city. The map has been lithographed by Bro. W. T. Galloway, 540 Clay street, and is pronounced a work of art. This map and directory is sold for 10 cents each, and is worth ten times that amount to a resident or visitor.

A. O. U. W. Directory.

Cards inserted in this list at the rate of 25 cents per month payable semi-annually in advance. If errors or omissions are noticed, please write the office direct.

Window Gardening.

Generally speaking, Californians can do all the gardening they care for out of doors, and the list of hardy plants in our climate is, as a rule, much larger than the garden area. There are, however, among our readers in cities and towns, some landless people to whom house gardening gives the only chance for the enjoyment of plant growth. There are also others who desire to supplement their out-door gardens with a house growth of exotics, whose delicate leaves and flowers are in contrast to the coarser tenants of free air and sunshine. One of our neighbors recently added a square bay-window to his house and fitted it up especially for a window garden, a pair of low French windows serving as an entrance thereto. The venture was quite a success, adding to both the exterior and interior beauty of the house.

The engraving on this page shows how the light end of a room may be decorated with living plants, and it is merely put forth as suggestive, because arrangement and choice of plants will vary with individual tastes and facilities. There are, however, some general hints which may be of general use to those who engage in window gardening. We select some from the "Pacific Rural Hand Book," by C. H. Shinn:

Window gardening is one of the divine arts, and must have been invented for the sake of city dwellers, that they might, in some degree, learn to love Nature's grace and quiet delights. It is best to use a window with a southern or southeastern exposure, if possible, for only a limited range of plants succeed in the northern windows. A strong wooden box may be fastened securely to the window-sill outside, and filled with good rich earth, which may be had by mixing the sifted street sweepings, or the dust of a road, with half its weight of sand. The box will last much longer if it is lined with tin, making holes for drainage. The outside may be covered with rustic work, or with oilcloth, but the vines will soon hide it. Costly and beautiful window-boxes of earthenware, iron and stained wood may be bought, if desired.

House plants may be kept in pots or boxes, placed on a shelf or table near the windows, in a well-aired room. The surface of the pots must be kept stirred and free from weeds and moss. Give the plants a thorough watering, and then leave them until the surface looks dry again. Pick off the dead and decaying leaves and faded flowers; if mold appears, the place is too cold and damp; if the leaves curl and falls it is too hot and dry. Pinch back the shoot, of fuchsias, geraniums, coleus, etc., so as to keep them compact. Florists have a bad trick of running them up tall and slender, so as to save room in the greenhouse; when you buy plants get stocky ones with short joints and dark leaves. Set the pots in saucers, and a little apart, so as to allow a free circulation of air. Turn the plants half way around every few days, or they will grow one-sided. Keep a saucer of wet sand on the window sill, and start slips of your choicest plants.

EFFECTS OF LAGER BEER ON GOATS.—Recently some Pennsylvania beer sellers tried the effects of beer on a goat. Whether the experiment was for the purpose of determining the quality of the beer, or the constitutional toughness of the goat, is not recorded; but the result was fatal to the goat, notwithstanding the hardihood for which he is proverbial. Just how many glasses were required to extinguish him is not mentioned; but he died, and the high quality of the beer was established beyond the possibility of cavil. But this is not the end of the story. The Humane Society learned of the proceeding, and immediately began an action against the beer venders for cruelty to animals. The action was undoubtedly justifiable, but is a matter of wonderment that the same law-makers who have found it an offense to kill goats with beer, have never once thought of its being a crime to destroy human beings by the same means, although there are a hundred thousand human beings sacrificed by this means, to one goat. It is to be hoped that the question of prohibition will be agitated until human beings are, at least, as well protected as goats.

PROGRESS OF THE TELEPHONE.—It begins to look as if the telephone would shortly become as formidable a competitor of the telegraph in the country, as it has already become in the cities. Arrangements are now being made to connect a large number of the interior towns of the Western States with the chief cities, like Chicago and St. Louis. For some time large towns near to each other have enjoyed the use of the telephone, and the service has given great satisfaction. A new company, with a new telephonic system, is spoken of by the papers. This new telephone, so it is said, can transmit messages more clearly and at longer distances than by the Bell system, and has the circuit so arranged that none but the party to whom the message is sent can hear what is being said. Additional improvements in the telephone may be expected in the future, and its use is bound to be greatly enlarged. With its expansion let us hope that the service will be improved and cheapened.—*Industrial World.*

IT is stated that the Catholic clergy of London are about to commence preaching a crusade among the Irishmen of their flocks, against connection with secret societies.

The Daily Swelling of Plants.

With delicate means of measurement Herr Kraus has recently proved the existence of a phenomenon in all plant organs, which is connected with their variable water-content, and consists in a periodical swelling and contraction in the 24 hours. Leaves, etc., decrease in thickness from the early morning till the afternoon, when they begin to swell again, attaining a greater size by night than by day (this is well seen in agave, aloe, and the like). Similarly with buds, flowers, green cones, fruits, etc., and with stems and branches. Herr Kaiser had before proved such a period in trunks of trees, and Herr Kraus shows that both wood and bark share in it, independently or unitedly. The various experiments of Herr Kraus—removal of foliage, watering, shutting out light, etc.—lead to explanation of the phenomena by the varying reciprocal action of those factors which bring water into the plant and those which carry it away. By night only the water-absorbing activity of the parts below ground operates; by day the water-consuming activity of the parts above ground besides. The water-consuming activity depends mainly on the foliage and on light (removal of leaves or of light stops the contraction) and consists essentially in transpiration. Herr Kraus states that when a plant is watered these things occur: In a short time, less than an hour, the stem begins to swell; both wood and bark take part in this, the wood always first. The swelling progresses at a pretty quick rate, upward of several meters per second. After some time, perhaps an hour, contraction gradually recurs. The contraction began at the upper part of an acacia after 10 minutes, whereas the swelling at the lower part continued 50 minutes. This shows that the contraction is due to the activity of the foliage, and is gradually extended downward.

DESIGN FOR WINDOW GARDEN.

A MICRO-TELEPHONE has been used with success in discovering underground water-courses in the Tyrol. By the way, may not those persons who used "divining rods" to discover where wells could be dug have been possessed of an unusually sensitive power of hearing, which enabled them to detect the gurgling of water deep down in the earth, and simply employed a willow wand as a "blind."—*Invention.*

"WHAT makes Col. ——— so popular? I'm sure he's very stupid. He can hardly see beyond his nose," said a lady to a friend, who replied: "My dear, sharp-sightedness is not what makes a person popular. It is what the colonel doesn't see that gives him such popularity."

The Resemblances Between Men and Monkeys.

If the skeletons of an orang-outang and a chimpanzee be compared with that of a man, there will be found to be the most wonderful resemblance, together with a very marked diversity. Bone for bone, throughout the whole structure, will be found to agree in general form, position, and function, the only absolute differences being that the orang has nine wrist-bones, whereas man and the chimpanzee have but eight; and the chimpanzee has thirteen pairs of ribs, whereas the orang, like man, has but twelve. With these two exceptions, the differences are those of shape, proportion, and direction only, though the resulting differences in the external form and motions are very considerable. The greatest of these are, that the feet of the anthropoid or man-like apes, as well as those of all monkeys, are formed like hands, with large opposable thumbs fitted to grasp the branches of trees, but unsuitable for erect walking, while the hands have weak, small thumbs, but very long and powerful fingers, forming a hook rather than a hand, adapted for climbing up trees and suspending the whole weight from horizontal branches. The almost complete identity of the skeleton, however, and the close similarity of the muscles and of all the internal organs, have produced that striking and ludicrous resemblance to man which every one recognizes in these higher apes, and, in a less degree, in the whole monkey tribe; the face and features, the motions, attitudes, and gestures being often a strange caricature of humanity. Let us, then, examine a little more closely in what the resemblance consists, and how far, and to what extent, these animals really differ from us.—*Popular Science Monthly.*

A RARE CURIOSITY.—According to the Utica (N. Y.) *Observer*, Mr. F. B. Morse, of that city, has in his possession a carefully preserved specimen of a mermaid, captured by him while bathing on the Chinese coast. The animal is a singular looking object, the head, shoulders and forward portion of the body, including a pair of arms, bearing a striking resemblance to the human form, while the remainder is like a fish, with the usual fins and tail. The head was covered with hair when the animal was captured. It was taken alive while lazily swimming among some beautiful coral formations in shallow water, but it only lived two or three hours in captivity, and the body was preserved by a Chinese process. It measured two feet and four inches when alive, but its length has shrunk to 21 inches.

Is the Mediterranean of Recent Origin?

The degree of likeness or unlikeness of the fauna and flora in regions more or less apart, may be found to throw light on changes that have occurred in the configuration of land and sea. This line of thought has lately engaged the attention of M. Blanchard. In an interesting paper to the Paris Academy he shows, by numerous examples, how the fauna and flora on the extensive coasts of the Mediterranean present the same general character, which disappears at a short distance from the coast, where the ground rises. If the Mediterranean coasts, he says, were brought together, the most attentive investigator might pass from Europe to Africa, or to Asia, without any trait of living nature making him aware of it. Now, as very moderate obstacles prevent the dissemination of a large number of animals and plants, it seems certain that the Mediterranean would be absolutely impassible for most species.

M. Blanchard infers that the sea has been formed at a recent epoch, in the midst of a region already inhabited by the animals and plants now found on its coast. Recent data as to the marine fauna he regards as confirming this view; for the fauna of the depths appear to be entirely from the Atlantic. The inland sea must at one time have extended much further eastward, and may have communicated with Arctic waters and with the Indian ocean; it appears not to have been in junction with the latter since the miocene epoch. From the geological point of view, M. Daubree was unable to think the Mediterranean of quite recent formation; for there are cretaceous, eocene, and miocene deposits in the space it covers. More recently, in pliocene times, the sea exceeded its present shores, and pliocene deposits are found throughout the extent of the present basin in the numerous islands which rose from the sea at the end of the tertiary epoch.

THE USE OF SHARK SKINS.—The skins of certain sharks are used in jewelry for sleeve buttons and the like, and when dried and cured take a polish almost equal to that of stone, and greatly resemble the fossil coral *porites*. The vertebræ of the shark are always in demand for canes. The opening filled with marrow during life is now fitted with a steel or iron rod. The side openings are filled with mother-of-pearl, and when polished the cane is decidedly ornamental. In India, in 1880, $300,000 worth of shark fins were shipped to China for food. In the islands of the Pacific the fish is in great demand for its teeth, which are manufactured into weapons of various kinds, ranging from spears to swords and daggers. The teeth are all serrated or saw-edged, and make terrible wounds. The base of the tooth is bored with some small instrument, and 40 to 50 of them are tied or lashed to a hardwood sword, forming the edge. The hilt is also protected by crosspieces armed in the same way. So effective are these weapons that the natives of these islands wear an armor made of rope especially to protect themselves from the shark's teeth.—*Sea World.*

POLISHING SHELLS.—Spon gives the following facts respecting the methods employed for polishing shells: 1. Marine shells are cleaned by rubbing with a rag dipped in ordinary hydrochloric acid till the outer dull skin is removed, washing in warm water, drying in hot sawdust, and polishing with chamois leather. Those shells which have no natural polished surface may either be varnished or rubbed with a little tripoli powder and turpentine on wash-leather, then fine tripoli alone, and lastly with a little fine olive oil, bringing up the surface with chamois as before. 2. The shells are first boiled in a strong solution of potash, then ground on wheels, sometimes through one stratum, to show an underlying one, then polished with hydrochloric acid and putty powder. In this operation the hands are in great danger. Shell grinders are generally almost cripples in their hands. 3. Polishing mother-of-pearl—Go over it with pumice stone finely powdered (washed to separate the impurities and dirt), with which polish it very smooth; then apply putty powder and water by a rubber, which will produce a fine gloss and good color.

WATER WHEELS.—There are three ways by which the power may be obtained from the falling water, and all water wheels come under one or the other of these three, viz: by weight, by pressure, or by impulse. Which kind should be used in any given case must be determined by circumstances. In no case can any kind of machine be made to yield more power than the amount due to the weight of water and the distance fallen, but there may be a very large loss, and one kind of wheel being substituted for another, frequently diminishes the loss so much as almost to lead one to believe that the wheel itself was a source of power. To diminish the necessary losses to the smallest amount possible is the aim of the skillful maker of water wheels, and the difference between the old-fashioned overshot straight-float wheel, so often introduced by painters in their picturesque landscapes, and one of the modern turbines, is about as great as between a steam engine of the last century and an automatic expansion engine of the present day.

A CLERGYMAN, in a lecture on "How to get Married," said: "Every man wants a wife, and every woman wants a husband. But the great difficulty is that the woman the man wants won't have him, and the man the woman wants wants some other woman."

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and hand some," and first class in all respects—to the benefit o both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, - - July 1, 1882.

Fraternal Feeling.

All affectation but creates disgust, and one might as well expect singing from a horse as to expect the fraternal feeling to come forth at his bidding.

Such feeling can arise only from association and a fundamental desire to do good. We may be able to command our words at will, but not our feelings. They will flow on unrestrained; and if, perhaps, we chance to check them, they will only collect themselves for a mightier effort than before. But if our desires and motives are always worthy, our feelings will never shame us, nor ever need restraint. That words are things is true only when they are fraught with feeling.

The finished phrase, the rounded period, the varied paragraph, the flowing dissertation—all may be summed up on call; but the friendly pressure of the hand cannot be duplicated; the tear of sympathy no man can shed at will; the loving smile no man can counterfeit. Yes! if feelings were coins, no man need look for spurious ones.

Supreme Recorder's Report.

From a supplementary report of the Supreme Recorder, intended to show the condition of the finances to June 1, 1882, it appears that the receipts of the beneficiary fund from March 1st to June 1, 1882, have been $76,087.26; disbursements, $76,000; balance in hands of Receiver, $87.26; contributed beneficiary fund, balance on hand, $41.71; relief fund, receipts, $24,998.60; disbursements, $24,700; balance on hand, $298.60; general fund, receipts, $14,057.37; disbursements, $4,742.99; balance on hand, $9,314.38. Total liability on yellow fever account, $21,682.15. Certificates of indebtedness: Certificates Nos. 1 to 307, inclusive, sold by Tennessee Grand Lodge, $16,271; certificates Nos. 341 to 355, sold by Supreme Lodge, $7,950; certificates Nos. 308 to 340, inclusive, unsold in hands of Tennessee Grand Lodge, $1,749; certificate No. 356, unsold in hands of Supreme Lodge, $530; total certificates authorized, including interest to March 1, 1880, $26,500. Total paid for cancelled certificates, $7,290.

THE Workmen of Lincoln, Placer county, will give a grand Fourth of July celebration, including a huge barbecue, big procession of horribles, poem, oration, songs by the glee club, refreshments of all kinds, and fireworks and ball at night. The celebration will take place at the Workmen's grove, near Lincoln. A magnificent time is contemplated.

POSTPONED.—The entertainment which Pacific Lodge, No. 7, was to give on Thursday evening, June 30th, has been postponed till Thursday evening, July 27th.

Important Work Done.

The session of the Supreme Lodge is over. Much very important business was transacted, and it will be observed, in less time than has been usual in the sessions of that body. There was a disposition to work, and to consume as little of the funds of the Order as possible, consistent with careful legislation.

We are gratified that at last the importance of requiring a strict adherence to the requirements of the laws of the Order is fully appreciated, and that henceforth we may expect no countenance will be given to rebellious performances. The course of the Supreme Master in the Iowa difficulty was fully sustained and emphasized by re-electing all the Supreme Lodge officers. But for this disposition on the part of the Supreme Lodge, California would have had her honors increased by the election of Supreme Foreman M. W. Fish as Supreme Master, an honor which we are assured remains suspended but another year.

Amongst the most important amendments to the Supreme Lodge Constitution was the one proposed by Supreme Foreman Fish, and endorsed by our Grand Lodge, providing that each Grand Lodge should be entitled to one vote for each 1,000 members or fraction over 500, in addition to the votes of the Representatives. Under the old rule, allowing but five votes to any Grand Lodge, no matter what its membership, the minority was practically the ruling power instead of the majority, and laws were frequently being passed in the interest of the few, rather than of the many.

Such legislation, in the nature of things, could not be satisfactory to the great body of the membership, even though otherwise unobjectionable. It is a well-established principle in governmental affairs, that any law passed in opposition to the will of the majority of the constituency to be effected thereby had better never been enacted. Henceforth we shall have no reason for complaint in this regard, and we may safely assume that the minority will be treated with more generosity and courtesy than ever before.

The readjusing of the maximum rate of assessments for each jurisdiction under the relief law was another matter of general importance, and, as fixed, we believe, will give general satisfaction. As the law stood, the rate was too low. The relief law should never be called into force except in cases of dire necessity, and where ,without assistance, a jurisdiction should be in peril of its existence. Hereafter, except in the Supreme Lodge jurisdiction, we may expect no relief calls, unless in case of epidemics, or other great calamity. Then we should have some means by which to mass the strength of the Order to the end that the beneficiaries of no good Workmen shall ever be left unprotected, or the obligations of the Order violated.

Another act of general application was passed which is a radical departure in the matter of reinstatements. In the future, when a member, or rather his certificate, becomes suspended, reinstatement can only be made by payment of delinquencies, as heretofore, which must be reported to in the Lodge, and a majority vote had in favor of such reinstatement, from which time reinstatement will date, and not before. This is an experiment which will work a hardship in some cases, but really seemed to be necessary for the general good. Time alone can prove whether the measure is a wise one or not.

Various other matters were disposed of which we have not now time to discuss. Soon they will all be placed before the readers of the WATCHMAN in connected form for the information of the brotherhood.

THE following from the German in *Der Odd Fellow* is translated to apply to Workmen: 1. Proposition: The reading of the fraternal press is very necessary for every Workman who wishes to inform himself of the affairs and interests of the Order. The fraternal press is calculated to awaken and claim interest in the Order, and drive away indifference. 2. Proposition: Every brother shall be required to take for himself, or, at most, in connection with three brothers, the organ of our Order. The Lodge is not only authorized, but obliged, to see that this requirement has been complied with.

THE fifth annual session of the Supreme Council, Royal Arcanum, was held at Baltimore, April 25, 1882.

Condition of the Order.

Excluding Iowa, the Order shows a net increase of 310 Lodges and 16,766 members, being an increase of over five per cent. in all the Lodges of the Order. The total number of Lodges for the past fiscal year is reported 2,128; total membership, 101,685; total number of deaths, 764; total amount paid on death losses, $1,503,555.80. Average age of members of the Order for the year, 38 years; average duration of membership of those who have died, two years, four months; average membership of each Lodge, 93 members; average of deaths per thousand, 8.18; average number of assessments for the year in the entire Order, 17 and one-seventh; average monthly disbursements of beneficiary fund for the entire Order, 125,296. These figures certainly show that the Order s by no means in an unhealthy condition. It is true that in Ohio, Indiana, Kentucky and Georgia the death rate has been very severe, but the average death rate for the entire Order is so low, comparatively, that it would seem that the Order must be healthy somewhere. This is as it should be. The only way the Order can stand is by being united all over the land.

The healthy jurisdictions must care for the sick, for no one knows when sickness will spread its devastating influence over the healthiest locality in the world. And if any one jurisdiction becomes so puffed up with transient health as to believe itself iron-clad against the vicissitudes and uncertainties of human life, promptly "fire it out," as our brave Wm. H. Baxter has done once already, and let it stand alone awhile. It will soon realize its situation and beg for admission to the fold again.

The Supreme Lodge has met, received reports, deliberated and adjourned.

No very important amendments to the Constitution and laws were effected, but such as have been passed we shall give in full from time to time.

The California delegation endeavored to secure the adoption of resolutions convening the next session of the Supreme Lodge at San Francisco, but did not succeed. The next session will be at Buffalo, N. Y. Twenty-one Grand Lodges, including that of Iowa and the Grand Lodge of Ontario, were reported entitled to representation by 63 Representatives, not all of whom were present, however.

The present efficient officers were re-elected, namely: Wm. H. Baxter, Detroit, Mich., S. M. W.; M. W. Fish, East Oakland, Cal., S. F.; Theo. O. Case, New York, S. O.; M. W. Sackett, Meadville, Penn., S. R.; S. S. Davis, Cincinnati, O., S. Rvr.; R. H. Flanders, Georgia, S. G.; R. M. M. Patten, Ontario, S. W.; J. D. Vincil, Missouri, S. T.

Medical Examiner's Report.

From the Supreme Medical Examiner's report, we deduce the following: That out of 503 applications he has made 53 rejections. Of these the majority rejected were 15 daily drinkers, hereditary consumption in family, 12, saloon keepers, seven. The most remarkable thing in connection with these rejections was the very persistent determination in most cases of the local examiners, deputies and Lodges to get the candidate through, even after they had been forced to see the unsafe risk they were about to assume. "He is a leading and influential citizen" a "good fellow," his "rejection will ruin the Lodge," "other societies will take him," etc., were the reasons adduced for their conduct. This is all talk, and as soon as people realize that we are in earnest in our determination to accept only the very best, first-class kind of material, they seek admission to our ranks as they do to no other benevolent organization or life company. We have raised our standard and must keep it where it is, or elevate it more, if we expect to reap the full benefits of the system.

Putting our average death rate at the very highest, nine deaths per thousand, and we are still ahead of life insurance companies, who calculate on ten deaths per thousand. In the New York Life the deaths from consumption are 27%. Our last year's experience shows only 18½% from consumption of the whole number of deaths. This is surely a favorable showing, and in spite of the great cry which has been raised, proves that our portals have been as well guarded by mutual and fraternal interests as have those who had only pecuniary obligations at stake. This report and its suggestions commends itself to sister organizations as well as the A. O. U. W.

Open Lodge.

An exchange remarks that "the idea of holding open Lodge entertainments in connection with the Lodges of our Order is a good one," etc. Further, it says, "they would be the means of bringing a great many who do not at present understand and appreciate its benefits and blessings within our ranks." Now, if, in the face of all that has been said and written concerning the aims, objects and regulations of the A. O. U. W., there are still those who are ignorant of the nature of our Order, or who believe that it is a communistic organization, etc., we are, perhaps, about as well off without them, so far as the fraternal feature is concerned, for they must certainly be considerably "behind the times," not only in this, but in everything else, and would not understand and appreciate the benefits and blessings of the Order, if our meetings were all open to public gaze.

It is a noticeable fact that those Orders which have succeeded best are those whose doings are involved in the greatest obscurity. Let us have no open Lodges, if you please. If we must have entertainments, let us have them as other people have them; let Lodge work cut no figure in them. Keep all Lodge work and even the hall and regalia sacredly private except on solemn occasions, and time will reward us. The noisy advertisement will win, perhaps, for a moment and among a certain class, but true merit, like still waters, runs in silence and obscurity.

Fourth of July Celebrations.

As civilization advances in our land, there seems to be a desire, among many of our people, for a better way of celebrating our nation's birthday, and keeping its earlier events fresh in the memory of our young people.

The general call seems to be for something new in the way of amusements on this day. The Yolo *Mail* makes a very good suggestion when it says: "Take the money heretofore spent for tomfoolery, and give it to the speakers and poets and musicians. Offer prizes for the best essays and declamations on the subjects of Republics and Freedom and Political Economy. Give the young people an impetus to learn something of the history of our nation; and let the Fourth of July be a day when all work is laid aside, and each and every citizen shows his love of country by giving at least one day to a genuine celebration and thankfulness of its establishment." This idea, combined with the novel procession and entertainment described in the supplement to the *Youth's Companion* of June 22d, would make a very interesting day for old and young.

Parents, get up some kind of entertainment at home, and choose the companions you would like to have come in and enjoy it with your children, rather than let them amuse themselves about the streets of the noisy town and with such companions as you would much prefer they should not be with. Make home the pleasantest place on earth to them on this day, as well as others. Love of home will cause love of country to sink deeper into the soul, and patriotic men and women will be the reward of your pains. No matter if it is some trouble to you—isn't the future of your child dearer than present comfort? Do you not desire the next generation to be a credit to the teachings of the present? The continuance of the Republic depends upon the true patriotism and honesty of your children.

Every child thinks he must have his firecrackers on the Fourth of July, or else there is no fun at all. Provide him with a few fireworks, and he will be as well satisfied as though you had spent a great deal of money for him to burn up in a few moments. Take the remainder of what you feel able to spare, and give it to the fund for the literary tournament suggested, or else in providing tableaux of historical scenes and music for your home entertainment. You will find it beneficial to both yourself and children.

It will cause a furbishing of your knowledge of our country's past as you hunt up favorite scenes for the tableaux, and impress them upon the memories of the children in indelible letters.

Children always appreciate the trouble parents take for their amusement, and repay them with renewed demonstrations of their love, and by the delight they take in the pleasure thus provided.

We find the only true happiness we have is when we are giving pleasure to those around us.

THE ninth annual session of the Supreme Lodge, Knights of Honor, was held at Baltimore, May 9, 1882, lasting 10 days. The next session will be held at Galveston, Texas, on the second Tuesday in May, 1883.

MR. CUNNINGHAM, a fruit grower at Griffin, Ga., has 60,000 peach trees in bearing condition, besides thousands of other kinds of fruit trees.

Supreme Master Workman's Report.

The following is a condensation of the Supreme Master Workman's report:

To the Supreme Lodge:—By and with the concurrence of the proper officers, I appointed Bro. Wm. C. Richardson Supreme Medical Examiner. He has discharged his duties with distinguished ability.

The Committee to whom was referred the Bean and Rahl's claims, after a thorough examination into the merits of the claims, concluded to disallow them. I leave the question in the hands of the Supreme Lodge.

In conformity to the resolution adopted on June 7, 1881, the States of New Jersey and Delaware were united with the State of Maryland as one jurisdiction, known as the Grand Lodge of Maryland, New Jersey and Delaware.

In compliance with your instructions, and in compliance with the laws of the Order, the Grand Lodges of Massachusetts and of Maryland, New Jersey and Delaware were set apart as separate beneficiary jurisdictions, the former dating from and after January 31st, and the latter from and after March 4, 1882.

During the year there have been appointed Deputy Supreme Master Workmen for the territories named, the following Brothers:

Arkansas—S. S. Garret, G. W. Crosby, Ben Isbell.

Arizona—Levi M. Prince.

Colorado—A. B. Robbins, J. W. Day.

Dakota—Albert H. Taisy, Warren B. Steere, George D. Ellis.

Mississippi—Frank W. Merwin.

Nebraska—D. A. Holmes, Chas. E. Reynolds.

New Mexico—Alfred S. Addis.

Virginia—George T. Truitt.

West Virginia—Sidney L. Selby, A. J. Francis and S. M. Hathaway.

I have approved the by-laws of thirteen Subordinate Lodges, also the Constitution and laws of the Grand Lodge of Nevada, the revised Constitution of the Grand Lodge of Wisconsin, the amendments to the Constitution and laws of the Grand Lodge of Texas and Grand Lodge of Pennsylvania.

It having come to my knowledge that the degrees of the Order had been conferred on, and certificates issued to, persons over 50, I issued a general circular forbidding it, and commanding that all members who, being 50 years of age at the time of admission, were admitted subsequent to March 14, 1874, should be proceeded against and expelled.

The total number of Lodges is 2,128, a net increase during the year of 310. The total membership 101,685, a net increase of 16,766. Amount paid into beneficiary fund $1,505,555.80; general fund, receipts, $146,492.27; disbursements, $127,042.30. All of the above exclusive of Iowa.

After a long siege a new Grand Lodge was organized in Iowa, composed of delegates from 20 subordinate Lodges, 39 in number, who met at Marshaltown, Iowa, May 16th. At this meeting Supreme Representatives, three in number, were elected. I recommend no changes in our Constitution and laws, except, perhaps, that portion relative to the maximum rate of assessment, and concerning penalties.

With sorrow I announce the death of Bro. Pecot, a member of this body.

My expenses for the year have been $143.16.

Yours in C. H. & P.,

WM. H. BAXTER, S. M. W.

GUARANTEE FUND ASSOCIATION.—This auxiliary to the A. O. U. W. is enjoying a season of prosperity that is beyond precedent in similar organizations. The board, by resolution, has extended its jurisdiction to Oregon and Nevada, since which applications have been received from a number of the leading Workmen of those States, including the Grand Master and Grand Recorder of Oregon.

FROM the Supreme Medical Examiner's report at the recent session of the A. O. U. W. Supreme Lodge, it appears that the favorite method of suiciding is by taking poison; next, shooting and hanging. Of the 765 deaths which occurred in the A. O. U. W. ranks for the past year, 389 were from local diseases, 166 from hereditary, 93 by violence. 84 zymotic, 31 suicides, and 2 homicides. The most hazardous occupations are railroading, saloon keeping, and the practice of medicine.

A LARGE whale committed suicide by hanging himself with the telegraphic cable laid across the Persian gulf.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. PRATT, G. R.

WM. C. FLINT, ESQ., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

AGAIN at my post. Unexpectedly called to attend the Supreme Lodge session, the trip was made in the shortest possible time and with no accident or delay. On returning, we came over a portion of the territory just previously devastated by the terrible cyclone that passed over Kansas City and a portion of northern Missouri. The same time another swept over Iowa with a fury far greater than that over whose track we traveled. How much our brethren of the A. O. U. W. suffered by these disasters we do not know, but fear it was very great. The work done by the Supreme Lodge was important and considerable, a statement of which will be given in detail likely in time for the next issue of this paper.

WE felt a little pardonable pride when in the Supreme Lodge was read, by the Supreme Receiver, a statement of contributions for the relief of old Father Upchurch, to find that California lead all the rest more than two to one, and never before did we feel how high an honor it was to represent such a jurisdiction as ours. By the way, the Supreme Lodge did a very handsome thing in electing the good old brother as sitting Past Supreme Master for the ensuing term, and also in voting to pay him mileage and per diem for his attendance at the late session. May his life be spared to see his children as the sands of the sea in numbers, and the blessings of his early efforts cover the civilized world.

A NEW form of semi-annual report has been sent out to all the Lodges to be filled in lieu of those heretofore in use. These forms have become a necessity owing to the requirements of the Supreme Lodge and the laws of our own jurisdiction. Many Lodges have yet many of the forms now obsolete by reason of changes in the law, and yet they have been used up to the present time. The Order is becoming so large, and questions of great importance are so often coming up that can only be intelligently determined by accurate statistics, therefore more uniform and comprehensive reports have become imperative. It is hoped that Recorders will be very prompt in their transmission.

Presentation.

On June 13 the brethren of Unity, No. 27, presented Peter Abrahamson, P. M. W., a set of engrossed resolutions, set in gold-gilt frame of artistic design, 3½x4½ ft. Above the resolutions are the badges of a P. M. W. and Receiver, beautifully drawn, between which is the portrait of Bro. Abrahamson. Beneath the resolutions are the names of the committee, the M. W. and Recorder of Unity, with the Secretary of the Lodge and the letters C. H. P. This artistic souvenir was drawn by Bro. M. Gumpel, and is one of finest design, workmanship and elaborate finish, and was framed by Bro. Max Burkhart. The following are the preamble and resolutions:

WHEREAS, We learn, with feelings of deep regret, that our beloved Brother is to depart from our midst for another and distant sphere of labor and usefulness, therefore be it

Resolved, That the thanks of Unity Lodge, No. 27, be tendered to Bro. P. Abrahamson for the untiring energy and faithful guardianship of the funds as Receiver for four consecutive years.

Resolved, That we most cheerfully and cordially endorse and recommend Bro. P. Abrahamson to our noble Brotherhood everywhere, particularly to those among whom he may cast his lot.

WHEREAS, As Representative to the Grand Lodge of California, his remarkable devotion, ability, wise counsel, prompt and vigorous action in works of charity and love have endeared him to our hearts; that his kind and warm-hearted disposition will be missed in the Lodge room, we therefore doubly regret his departure

Resolved, That our good wishes will follow him, and we sincerely hope that success will crown his efforts. Heaven bless, and God abundantly reward him.

D. MARTIN,
P. T. HOLLINGS,
T. P. WILLIAMS,
} Committee.

A. MONTGOMERY, M. W.

THOS. P. WILLIAMS, Recorder.

The veteran Receiver, who has held this office for four successive years, was taken completely by surprise, and as Bro. I. D. Martin recounted his labors and faithful services to Unity Lodge, and the esteem in which he was held by Workmen, Bro. Abrahamson was visibly affected, and, in heartfelt and broken words, thanked his brethren for this token of love and respect.

CLEANING BRASS.—The government method prescribed for cleaning brass and in use at all the United States arsenals is claimed to be the best in the world. The plan is to make a mixture of one part of common nitric acid and one-half part sulphuric acid in a stone jar, having also ready a pail of fresh water and a box of sawdust. The articles to be treated are dipped into the acid, then removed to the water and finally rubbed with saw-dust. This immediately changes them to a bright color. If the brass has become greasy, it is first dipped in a strong solution of potash and soda in warm water; this cuts the grease so that the acid has free power to act.

A LARGE whale committed suicide by hanging himself with the telegraphic cable laid across the Persian gulf.

The Fraternal Spirit.

At the request of a number of our brother Workmen, we reproduce a short editorial, entitled "The Fraternal Spirit," which appeared in one of our recent issues. Sacramento Lodge, No. 80, reproduced and printed it on the pages of their assessment notices—a compliment which the WATCHMAN appreciates.

"Keeping up the fraternal spirit" does not mean calling a man "brother" at the Lodge meeting and ignoring his existence entirely at all other times. It does not mean that once a week, for an hour or so, you shall mingle freely with a number of members of the Lodge, all on equal footing, and then when the door closes you shall forget them until you give the password to the Watchman again. It does not mean that you shall look upon the Lodge simply as a convenient sort of insurance office, and upon the members as so many people who stand ready each to give your family a dollar on your decease. Nor does it mean that you shall have the benefit of results flowing from fraternal association without contributing your share of the work and trouble, as well as your dues.

The payment of certain half dollars and dollars per month is a simple business proposition, by which a member keeps his standing in his Lodge and pays his share in the mutual insurance feature. It has nothing to do with the fraternal part of the Order, one way or another.

Yet there are many—too many by far—who imagine they have done their duty by the Order when they pay what is called for promptly. They do not interest themselves in the business of the Lodge; will not share the burdens of conducting the meetings; will not take office; stay away so as not to serve on committees, and generally leave the work to a few. If all were of this class, the maintenance of the Order would be impossible, and it would soon disband.

To foster the fraternal spirit, the members must be more unselfish, and interest themselves in each other to some extent. If a brother is sick or unfortunate, some personal notice of each member of the Lodge would surely benefit him. A contribution of $25 from the general fund and an engrossed set of resolutions will not cheer him up as much as a visit from people who show an interest in him and his affairs; who are willing to aid him in a substantial manner, and sympathize with him in affliction.

There is nothing Utopian in this. It is not necessary to attempt an ideal perfection. We assist and expect to be assisted in turn. We may never need help, but it is comforting to know it would be forthcoming if required. If each man should perform only a small personal share in the real fraternization, a recognition of the firm establishment of the Order would be forced upon even those whose business interests oppose it.

Any brotherhood must have a community of interests, either of business or pleasure, or of both. But business interests promote no good fellowship or fraternal feeling, and the pursuit of pleasure is of a selfish nature. A fraternal feeling must be the outgrowth of social intercourse and communion, and must be voluntary. It cannot be forced. In order that it shall be fostered, the members of the Lodges must attend the meetings, participate in the debates and show an interest in the proceedings which are conducted for the common good.

How the Republic Gained a Citizen.

It is reported in anecdotes of the revolution, that on the day when the battle of White Plains occurred, GEN. Knyphausen, who commanded the German mercenaries, crossed the Hudson river, and with his troops took post about a mile from the Blue Bell tavern, preparatory to an assault on Fort Washington. That post was captured in the middle of November and Col. Ralle, of Knyphausen's army, who was killed at Trenton a few weeks afterward, made the Blue Bell his headquaters. Vanderventer's son then kept the tavern. He had a pretty sister, whose charms smote one of Ralle's aides so powerfully that he proposed marriage within 24 hours after they met. He was a fine-looking young Anspacher. He promised to remain in America when the war should be over, and vowed eternal fidelity to her. The maiden's heart was touched, first with sympathy, which speedily became transformed into the tender passion. Her mother consented to the marriage, but her brother stormed. The gallant Ralle, who had passed through a similar experience in his own country, favored the union, and, on the evening before his departure from the Blue Bell, the lovers were united in marriage, in the secrecy of the colonel's room, by the chaplain. The bride followed her husband in the chase of Washington across New Jersey, and the young Anspacher was slightly wounded, and was made a prisoner when his commander fell at Trenton. Refusing to be exchanged, he took the oath of allegiance to the newly declared republic at Morristown, and settled in east Jersey, where many of his descendants are now living.

TOO MUCH MINERAL WATER.—The Paris correspondent of the *Lancet* writes: "There is no doubt that a great number of dyspeptic cases that are met with in civilized countries owe their origin to the abuse of mineral waters; the result being undue dilatation of the stomach, and the production of atonic dyspepsia, one of the most harrassing forms of the malady for both patient and physician."

From City to Country.

One of the most pleasant fraternal visits of the season was made by Burns Lodge, with invited guests, to Los Gatos Lodge No. 76. On Saturday, June 10th, at 4:30 P. M., 30 Workmen, many of them accompanied by their wives and children, boarded the commodious ferryboat, via S. P. C. R. R. Through a line of highly cultivated farms, extending to Los Gatos, the gem of a city nestled in among the evergreen-clad hills near the Santa Cruz mountains. The trip was a pleasant one, singing and social converse and general hilarity in the cosy and comfortable cars of the S. P. C. R. R., until they whistled among the hills around Los Gatos. At the depot they were met by a brass band of 14 pieces, and a committee of Workmen to welcome them. After a good supper at the Los Gatos house, the brethren hied away to the beautiful hall, where was found a large number of Workmen in waiting. The business of the Lodge had been so arranged that it admitted of quick dispatch, and the usual intellectual feast was indulged in by appropriate and eloquent remarks by Bros. Wilson, P. M. W.; Dr. Hall, Foreman; —— McGrath, M. W., and Gus Pohlman, Rdr. of Burns, followed by sentimental and humorous songs by Bros. Desmond and Pohlman. Bro. Tinkham, of Burns, Bro. Peter Fisher, of Los Gatos, and A. Montgomery, M. W., of Unity, 27, made speeches that were well received. An adjournment was had to Lyndon hall, which was filled to overflowing with Workmen's wives and families, and guests. Over the platform was this motto, "We'll do Our Best." The evening was pleasantly and very happily spent in dancing, interspersed with literary and musical exercises. Sister A. K. Philbrook recited "Curfew" in fine style, followed by a solo by Bro. Desmond, "Keep the A. O. U. W. O'er the Door." A quartet and a humorous solo by Bro. Pohlman were sandwiched in between the dancing. At a late hour the happy company adjourned. The courtesy, kindness and hospitality shown by the brethren of Los Gatos, and favors shown to the visitors by the agents of the S. P. C. R. R. are deserving of special recognition and thanks. The early history of Los Gatos was one of disappointment and struggles, and at one time the proposition was made to surrender their charter. To-day there is not a more enthusiastic body of Workmen in this jurisdiction.

PHOTOGRAPHING THE SOLAR ECLIPSE.—M. Janssen took magnificent photographs of the recent eclipse at the Meudon Observatory, Paris, where his photographic revolver was set in operation to determine the first and the last contact. He also took two series of photographs ninety centimetres diameter, one negative and the other positive, by direct exposure, with two large refractors. This is the first time that the whole photographic power of the Meudon Observatory has been set in operation. In the sitting of May 22d of the Academy of Sciences, M. Janssen presented the photographs of the last contact obtained with his revolver during the eclipse on Daguerreotype plates. He stated that the inspection of the several images proved the contact to have taken place at a later time than that calculated. He presented, also, a large image, ninety centimetres in diameter, obtained with his large refractor, and stated that he was unable to detect any difference in the immediate vicinity of the moon in the representation of facuiæ and the minute details of the sun's structure. He considered the fact to be opposed to the existence of a sensible lunar atmosphere, as inferred from the spectroscopic observations of the French astronomers in Egypt.

A LETTER from Fort McKinney states that cattle valued at $13,500,000 are calmly grazing in what was, six years ago, absolutely an Indian country.

NEW WORKMAN DIPLOMA.—The New Workmen Diploma has received flattering testimonials from the Supreme Lodge and Grand Officers of this State. It is a work of art, and Workmen are being supplied throughout the United States. Copies can be seen and procured at Sol. F. Purdy's jewelry store, No. 16 Fourth street., or copies will be forwarded on receipt of price, $2, or sent C. O. D. Address C. H. M. Curry, publisher, No. 16 Fourth st., S. F.

PALMER'S,

726, 728 and 730 Market Street, S. F.

NEW DEPARTMENT added, with a full line of GENTS' FURNISHING GOODS. Our usual variety of Novelties in Millinery and FANCY GOODS and LADIES' FURNISHING GOODS.

Kid Gloves a Specialty.

FURNITURE.

H. Schellhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

About Obtaining Patents.

Patents Are Virtually Contracts

Between inventors and the public. The consideration flowing from both parties to the contract is expressly fixed by statute. The Government requires the following consideration in every case: First, that an applicant for a patent shall disclose a new and useful improvement, of which he is the first and original inventor. Second, that the invention has not been patented, or published in a printed publication, prior to the date of his *invention*. Third, that the invention has not been in public use, or on sale, more than two years prior to his application for a patent. Fourth, that the invention shall be properly described and claimed in the specification forming a part of the patent. Provided an inventor complies strictly with these conditions, the Government guarantees that the inventor shall have the exclusive right to make, use and sell the thing invented for the term of 17 years.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be carefully and accurately drafted, that it may afford him complete protection for his invention during the life of his patent.

Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. This question can often be answered gratuitously by the Commissioner, from full information of the invention, by reason of our long and extensive practice as patent solicitors and editors and publishers of first-class scientific and industrial journals during the past 20 years and over. When the question of priority of invention is not so readily to be determined, it is generally best to make what is termed a "preliminary examination," by searching through the patent office reports among the patents in the class to which the invention relates, or referring to our extensive patent library, containing compilations of special classes of American and foreign inventions, mechanical dictionaries, scientific encyclopedias, files of scientific and mechanical newspapers, and an immense number of patent applications by inventors of the Pacific coast, carefully filed by this office since 1860.

If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive for the small fee of $5 for the examination a verbal or written report showing definitely whereby his invention has been anticipated, thereby saving him further expense, and perhaps much time, useless delay, anxiety, etc.

To avoid all unnecessary delay, however, in securing patents at the earliest moment practicable, inventors will do well to forward a model, drawing, or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with $15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately, and forwarded to the inventor for his signature. When the inventor receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps to be taken.] When the patent is allowed, the inventor will be duly notified, and on sending the final Government fee of $20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretence of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give a case up as long as there is a chance to obtain a patent. The Agency charge is from $25 to $30, or sometimes more, if the invention is intricate or complicated, or requires much labor. Drawings cost from $5 upward, according to their number and the time employed; and, if a model is sent, the express charges upon this and the papers must be added. The total cost, in addition to Government fees, rarely exceeds $40, and for this we do all we can without appealing the case.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients sufficient to make the experiment, and also of the manufactured article itself must be furnished.

Models and Drawings.

Models are now called for only by the Commissioner of Patents and generally only in intricate cases. Perfect drawings of practical working machines are considered more satisfactory to the Patent Office than the old and cumbersome system of storing up an immense bulk of almost numberless models.

Drawings or sketches sufficient to illustrate clearly the invention, with a sufficient description to enable us to make a full set of perfect drawings for the Patent Office is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it for our use.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or very poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sales had the invention been fully portrayed by artistic and skillfully executed drawings. Again, when patents of this character are brought into court, the uncertainty and ambiguity of the drawings enable the opposing experts to mystify the judges as to the construction or combination of parts intended to be covered by the patentee. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken that the invention is fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

In the Patent Office

The application is assigned to the Examiner having charge of the class to which the invention relates. The case must then take its turn with others in the order of filing, and in due time is carefully examined to test the novelty of the invention. If the Examiner fails to find anything that anticipates the invention, a patent is immediately allowed, provided the specification and claims are drafted in proper form. Should the Examiner find a prior patent which, in his opinion, anticipates one or more of the claims in the application, a letter of rejection is sent to the attorney in charge of the case; and if the attorney coincides with the views of the Examiner, the claims rejected are cancelled. In preparing applications for patents, an attorney should be careful to familiarize himself with the class of inventions to which the application pertains, so that the specification and claims may be drafted as nearly perfect in the first instance as is possible. This course saves much time in prosecuting the application to a patent.

When claims are improperly rejected on patents which do not anticipate the spirit or wording of the claims, proper steps are immediately taken to convince the Examiner of his error. This is done, in most cases, by personal arguments, as the differences in construction, operation, function and results are more readily discovered and appreciated by an oral presentation of the facts than can possibly be done by relying solely on written arguments. In order that the Patent Office record of the patent shall be complete, an oral argument is generally supplemented by a brief in print, that others, in examining the files at any future time, may clearly comprehend the position taken by the Examiner and attorney in prosecuting the case to patent.

In addition to our own personal attention to the interests of our clients here, we have, for over 12 years past, had constantly in association with us in Washington, one of the soundest legal counselors and ablest of practitioners in patent business in the country, who carefully attends in person to our business at the Patent Office and has attained success in a most marked degree.

Perfect Claims.

The value and force of a patent are dependent on its claims. A patent may disclose to the public the most important and valuable invention, and yet the claim be of such meager scope that the patent is practically worthless. When the claims of a patent are so loosely drafted that infringers can flood the market with improvements, differing from the inventions disclosed by the patent only in slight changes in construction and arrangements of parts, such a patent is valueless to the owner, as it fails to afford him that exclusive and complete protection guaranteed by the Patent Law. Hence it is that the greatest care, skill and perseverance are required, first in properly drafting the claims in the first instance, and, second, in prosecuting the application before the Patent Office, and maintaining the rights of the inventor to claims as broad and sweeping as the invention will warrant. This latter is no easy task. The Examiners of the Patent Office serve in the capacity of attorneys guarding the interests of the public. It is their sworn duty to exercise the greatest care and watchfulness, that patentees do not secure claims of greater scope than they are justly entitled to. It is but natural that Examiners are sometimes in error as to just what scope should be accredited an invention. Although the Examiners act under honest convictions in cases where they refuse an inventor his just rights, yet it is the duty of the attorney to maintain the claims of his client, if he is convinced that they are just and proper. To succeed in this requires the display of tact, firmness and ability; and when the Examiner is made to see that the inventor is honestly and fairly entitled to the claims which have been rejected, he will almost invariably recede from his former action, and allow the case.

Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. (continuously editors and publishers of the MINING AND SCIETIFIC PRESS, nearly from its early commencement in 1860) offer comparatively far better facilities to the local inventors of the Pacific States and Territories than are possessed by any other agents in America. Members of the firm give personal attention to the applications entrusted to their care. They have been longer in practice in patent soliciting than most agents who are still personally engaged in the business. They have secured more U. S. and foreign patents in the past 20 years (with very few exceptions) than any other firm still existing. Their practice has been so successful and long continued that the great majority of inventions on this side of the American continent have been patented through their agency, thus affording them great and valuable experience, by thorough information of the true principles and points of novelty in the inventions, whether general in character or peculiarly local to this coast.

The extensive business combination and experience of this firm is undoubtedly one of the most fortunate in existence for affording inventors prompt and reliable advice and the best possible facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention in one or more of our influential and reliable newspapers, affording just the circulation that is best calculated to widely inform the class of readers most specially interested in the subject of his invention.

Saving of Time, Etc.

Inventors on this coast will find that owing to our familiarity with inventions and local affairs of this coast, we can more readily and fully comprehend their wants, and thus save much of the time ordinarily consumed in preliminary writing back and forth when distant agencies are employed.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee is $10 additional.

To enable us to prepare caveat papers, we only require a sketch and description of the invention.

Rejected Applications.

Inventors who have rejected cases (prepared either by themselves, or for them by other agents), who desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so.

DEWEY & CO.,
Patent Solicitors, Office of MINING AND SCIENTIFIC PRESS,
252 Market St. Elevator entrance, No. 12 Front St., S. F.
GEO. H. STRONG. W. B. EWER. A. T. DEWEY.

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P OWEN—Santa Cruz county.
B. W. CROWELL, San Benito and Monterey counties.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C HOAG—California.
H. W. MILLER.

Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

DO NOT DELAY.—Send us your subscriptions promptly. Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.

Nobleness of Women.

True nobleness in women consists in her living and acting up to her standard of right and justice. Although there is a great difference of opinion in regard to that standard, many there are to-day, whom the world terms intelligent women, who are spending their lives in fashion and display, wearing out physical, mental and all of their better nature. For does not fashion demand late hours, unhealthy dress and a forgetfulness of the poverty and heartaches that meet us on every side? Many a good woman, who will pause to reflect, will realize that her life is being spent in vain. Many dear little ones are hungering for a mother's love and affection, while the slave fashion is undermining health, and depriving her of the truest joy that God has given to women—the love and care of children. My prayer is, that we may all see the more clearly in the future than we have in the past. Yet we have quite a page of brave and heroic women, whose sons and daughters have risen above mere fashion, and given to the world that which will not perish when the grass is waving green above their heads. It is true that but few ever attain greatness, but there is something for all to do, and I think if mothers and others who have the care of children would study their interest more and note how our prisons are being filled, instead of the higher and nobler walks of life, we would before long have a purer Government, better society and better state of affairs in general.

Mothers, to succeed, must have education that books cannot give. Children are books which we must study, and often we may find that special methods required for the proper training of one child would not be proper for a brother or sister, so different are their natures even in the same family. I think if children were taught to love nature more and fashion and art less, it would be well for them. Bryant, one of Nature's noblemen, has said: "If thou hast learned a truth, which needs no school of long experience, that the world is full of guilt and misery, and hast seen enough of all its sorrows, crimes and cares to tire thee of it, enter the wild wood and view the haunts of Nature."—*M. J. C. in Rural Press.*

A Credit to its Friends.

[From M. C. Hawley's *Agriculturist*, June 18, 1882.]

There is a newspaper on this coast which is worthy of special credit. We allude to the PACIFIC RURAL PRESS. It entered its field of usefulness in 1870, not as the first farming journal on this coast, but to fill the want of a first-class, reliable and enterprising home and farm newspaper. Its publishers (A. T. Dewey and W. B. Ewer A. M.), journalists of long and successful experience on this coast and elsewhere, had the means in their hands and the faith in their hearts to issue from the first a handsome, illustrated, ably edited and faithfully conducted advocate of the highest and best interests of agriculturists of all classes on this coast. With all these favorable circumstances, their enterprise was a success from the start. We question if there is a journal in the United States which enters the family circle with both reading and advertising columns freighted with matter more entirely unobjectionable to the purest and tenderest minds of the household. Its circulation extending with remarkable uniformity among the leading, thrifty and intelligent agriculturists of the Pacific coast, has, by its aid added "millions" to the material wealth of its many readers, and to the advancement of the community throughout which it has disseminated its practicable information. Its extra issues, frequently embrace from 24 to 32 pages, the last number (June 3d), being a "Tourists' Edition," containing a map of the "Springs" and other places of resort in California, and a large amount of original and condensed matter concerning the natural and wonderful health resources of our State. Considering the freshness and extent of the original matter contained in its weekly issues, they may be favorably compared with the best agricultural publications of the world. All considered, it is not too much to say that the PACIFIC RURAL PRESS is really a credit to itself, its patrons and the glorious State it represents.

THE new iron steamship *San Jose* left Roach's shipyard Saturday afternoon for New York, to take her place on the line of the Pacific Mail Steamship Company.

THE number of bills and joint resolutions introduced in the House and Senate this session are now 9,000, and will probably reach 10,000 before adjournment.

Cigars.

J. W. CURTIS. G. W. DIXON.

CURTIS, DIXON & CO.,

CIGAR MANUFACTURERS,

Factory, 309 to 313 Clay St.

Office, No. 309 Clay Street.

Boots and Shoes.

Greatest Invention of the Age in the Shoe Line.

P. KELLY'S

PATENT

Boot and Shoe Combined.

Patented June 22, 1880.)

ADVANTAGES:

1. Does not bind around the ankle like the old style Congress Gaite..

2. The elastic, being placed back of the ankle bone, is protected from wear. 3 Sits and looks on the foot like a tongue boot. 4. Easy to put on and off. 5. Handsome on the foot.

P. KELLY,

Patentee and Prize Boot Maker, and dealer in and Manufacturer of Ladies and Gents' Fine Boots and Shoes 238 Kearny St., cor. Bush.

E. MAIN, 315 Folsom Street,

Makes to order Gents' Fine French Calf Boots from $6 to $10; Gaiters from $3 to $6; Alexis from $3.50 to $5; Men's Heavy Kip Boots, $6; Oxford Ties, French Calf, $4; California Leather, $3.50; Men's Working Shoes from $2.50 to $3; Children's Shoes made to order. Persons in the country ordering to the amount of $12, I pay the express charges. I sell nothing but my own manufacture. Cheapest repairing shop in the city.

MISSION

BOOT & SHOE

MANUFACTORY.

All kinds of Ladies' and Gents' Misses' and Boys' BOOTS and SHOES Custom Made. Heavy work for Youths and Children a specialty. All work guaranteed, and all untimely rips repaired Free of Charge.

No fit, no sale. Repairing done at moderate prices.

TERRANCE SULLIVAN, Manufacturer,

214 Sixteenth Street, between Howard and Capp, S. F., Cal.

CHAS. DIETLE,

PRIZE

BOOT MAKER,

No. 235 Bush St., Occidental Hotel, S. F.

The Finest Quality and Latest Styles of Custom Work Neatly Executed. Repairing Done at Short Notice.

Columbia.

Columbia, Columbia, to glory arise,
The queen of the world, and child of the skies!
Thy genius commands thee; with rapture behold,
While ages on ages thy splendors unfold
Thy reign is the last and the noblest of time,
Most fruitful thy soil, most inviting thy clime;
Let the crimes of the East ne'er encrimson thy name,
Be freedom and science and virtue thy fame.

To conquest and slaughter let Europe aspire;
Whelm nations in blood, and wrap cities in fire;
Thy heroes the rights of mankind shall defend,
And triumph pursue them, and glory attend.
A world is thy realm; for a world be thy laws,
Enlarged as thine empire, and just as thy cause;
On Freedom's broad basis that empire shall rise,
Extend with the main, and dissolve with the skies.

Fair science her gates to thy sons shall unbar,
And the east see thy morn hide the beams of her star,
New bards and new sages unrivalled shall soar
To fame unextinguished when time is no more;
To thee, the last refuge of virtue designed,
Shall fly from all nations the best of mankind;
Here grateful to heaven, with transport shall bring
Their incense, more fragrant than odors of spring.

Nor less shall thy fair ones to glory ascend,
And genius and beauty in harmony blend;
The graces of form shall awake pure desire,
And the charms of the soul ever cherish the fire;
Their sweetness unmingled, their manners refined,
And virtue's bright image, enstamped on the mind,
With peace and soft rapture shall teach life to glow,
And light up a smile on the aspect of woe.

Thy fleets to all regions thy power shall display,
The nations admire and the oceans obey;
Each shore to thy glory its tribute unfold,
And the east and the south yield their spices and gold.
As the day-spring unbounded thy splendor shall flow,
And earth's little kingdom before thee shall bow,
While the ensigns of union, in triumph unfurled,
Hush the tumult of war, and give peace to the world.

Thus, as down a lone valley, with cedars o'erspread,
From war's dread confusion I pensively strayed,
The gloom from the face of fair heaven retired;
The winds ceased to murmur, the thunders expired;
Perfumes, as of Eden, flowed sweetly along,
And a voice, as of angels, enchantingly sung:
"Columbia, Columbia, to glory arise,
The queen of the world, and the child of the skies."

—*Timothy Dwight.*

The National Holiday.

The revolving months have brought us again to the eventful July, and to the holiday of holidays in the United States—the anniversary of the Declaration of Independence. By common consent and long usage, the Fourth of July has come to be regarded as the harvest time of patriotic thoughts and expressions, and is the day which both young and old Americans delight to honor, each in their own way. With the young it is a day of spectacles and tumult; with the old it is a rest and recreation, coupled with patriotic reflections and prophecies. To all, the day is welcome.

It has become trite to allude to the items of our national progress. The orations and essays of the Centennial year gave the country such a feast of these patriotic effusions that the appetite has cloyed of them, and the tendency has been of late to make Fourth of July eloquence assail the weaknesses of the nation, rather than extol its virtues. This is well enough, for the hoats of abuses and oppressions practiced by those in power and privilege have made the statement of the Declaration, that all men were created free and equal, seem a cruel satire. And yet, while one is keenly conscious of the defects of our governing, which admits of extortion by privileged classes, or malfeasance by those in positions of trust, it must not be forgotten that, in these evils, we are not alone in the world, or that, if one should attempt to escape these wrongs by emigration to other lands, it would be but flying to ills we wot not of.

Every nation is entitled to be judged by its best work. This is the principle in ranking an artist or an author, and this is what we, as people, have a right to demand in all judgments passed upon our institutions. Moreover, no people can be fairly condemned for evils which they themselves see and acknowledge, and which they are struggling to remove. It is those who are enamored of their vices, or insensible to their evil conditions, that deserve the sharp sting of the satirist; those who are casting about for the means whereby to escape from bad conditions are entitled to encouragement and co-operation. But it is no new thing among satirists for them to fiercely denounce vices after every one has acknowledged them to be vices, and to send all their arrows at those who have thrown down their arms.

There is, no doubt, a less effective general administration of affairs here than abroad; but, before we take this too much to heart, it would be well to inquire into the compensating circumstances. We should scarcely be the gainers if we substituted the slovenly streets of our cities for the elegant boulevards of Paris, if, in so doing, we should have to saddle ourselves with Napoleonism. It is not difficult for arbitrary will to remedy a hundred minor evils; communities so governed always make the best show to the eye, and are superficially under far better regulation. There is no need of pointing out at what cost this elegance and outward serenity are purchased. One cannot deny the superiority in many particulars—by no means in all—of English law and administration; but it is clear we should be the losers if we bought with all this authority and smooth order, the supremacy of a class, the centralization of land and wealth, the impoverishment of the mass. It is not to be denied that we might have, and ought to have, many of the advantages of foreign systems, without losing any that we now possess; it is, moreover, certain that, in time, we shall attain many of them; but in Nature and law there are always compensations, and hence we should not be in despair, even if a government, in pursuit of its own principle of the largest liberty, the largest space for unrestrained individual action, should find it necessary to withhold its hands from some things that would be better if put under restrictions.

But it must be believed that the near future will bring great reforms in our national administration of affairs, so that our social system shall not be a fabric of petty tyrannies, while we still draw the breath of national freedom and independence. There has been great progress made of late in showing forth the discriminations, oppressions, and extortions of monopolies. The courts have already held that the people had rights which must be respected. It is quite fair to believe that the movement will go on until men are found with courage and skill to frame regulations which shall restrain public servants from assuming the place and prerogatives of masters.

There is good reason, then, for congratulation and rejoicing over our national progress. Our position in trade and manufactures, in fact, our industrial character generally, is the wonder and admiration of the world. Our homes are improving, our children are enjoying educational advantages which the world cannot equal. In all our boundaries there is peace and plenty, while elsewhere wars rage and famine brings unuttered woes. Of a surety the national holiday of July, 1882, will be a goodly day to celebrate, and if the public demonstrations be far from the homes of some of our readers, they have still the opportunity for patriotic conversation or musings which may stir the blood and cheer the heart with patriotic pride. Let all, therefore, take part in the celebration, each in his own way, and thus show appreciation of our goodly heritage—a land of freedom and abundance.

English and American Iron-clads.—It is a curious fact that the British admirality are experimenting with inclined armor to resist heavy guns, and what is still more curious, have come to the conclusion that the resisting power of an armor plate is greatly increased by giving it a considerable angle with the line of fire. Years ago, in the early days of iron-clads, it was found by our Government officers that at considerable degrees of inclination a very thin plate was capable of keeping out heavy shot, and this principle was extensively applied during the war to our iron-clads. This principle, however, was entirely disregarded in England, where the opinion prevailed that inclination was of very little value. This opinion was founded, however, upon insufficient data, the inclinations that were tried having been altogether too small to be effective. At the present time three and four-inch armor, inclined at very considerable angles, has been found to do so good work that further experiments are promised, and the opinion is gaining ground that a turret with highly inclined sides may, after all, be the turret of the future. If the principle can be successfully applied, the weight of the plates upon iron-clads can be greatly reduced, or what is the same thing, the resistance of the plates used greatly increased.

French Engineering.—France leads the world in engineering schemes, and seems determined to maintain it. Her latest proposition is to spend $300,000,000 in the construction of a ship canal from Bordeaux, on the Bay of Biscay, to Narbonne, on the Gulf of Lyons, a distance of 238 miles. This would make a direct connection between the Atlantic and Mediterranean, but should not be confounded with the scheme to join the Loire and Rhone by canal, and thus secure the same result. The mode of locomotion proposed is that of towing the vessels by steam engines running along the banks, the estimated time in traversing the canal being three days. The financial success of the Suez canal, the receipts of which, for 1881, were upwards of $3,000,000, will doubtless be an inducement to many to invest in this enterprise, and it is said to be receiving liberal encouragement from French and other capitalists.

The Great Coal Gas Engineering Scheme.—The gigantic undertaking for conveying coal-gas from the United States coal regions to the seaboard is said to be taking a more definite shape, but it has not yet been decided whether the works will be located in the Connellsville region or in the West Virginia coal fields. It is designed to have branches from the six-foot main to Baltimore, Philadelphia, Washington, Wilmington, New York, and other cities. The estimated cost of the works and pipes is $45,000,000, of which $25,000,000 will be furnished in cash and the balance in bonds.

The Largest Chain.—There has lately been made at Hull, England, a chain of Siemens steel, 180 yards long, containing more than 3,200 links, held together by about 850 steel pins. It is intended for lifting purposes, has an estimated strength of 60 tons, and is thought to be the largest chain of its kind ever made.

Soldering cast-iron, says the *Engineer*, is generally considered to be very difficult, but it seems to be only a question of thoroughly making bright the surface to be soldered, and using a good solder and a clean swab with muriatic acid. Sodium amalgam might be usefully employed for the purpose.

Reminiscence of Washington.

"You say," I remarked to the old negro who drove the hack, "that you were Gen. Washington's body servant?"

"Dat's so! Dat's jes so, mossa. I done waited on Washington sence he was so high—no bigger'n a small chile."

"You know the story, then, about the cherry tree and the hatchet?"

"Know it?" Why, I was dar on de spot. I seen Mossa Gawge climb de tree after de cherries, and I seen him fling de hatchet at de boys who was stonin' him. I done chase dem boys off de place myself."

"Do you remember his appearance as a man—what he looked like?"

"Yes, indeedy. He was a kinder short, chunky man; sorter fat and hearty lookin'. He had chin whiskers and mustache and spectacles. Mos' generally he wore a high hat; but I seed him in a fur cap wid ear warmers!"

"You were not with him, of course, when he crossed the Delaware—when he went across the Delaware river?"

"Wid him? Yes, sir; I was right dar. I was not more'n two feet off'n him as he druv across de bridge in his buggy! Dat's a fac'. I walked 'long side de off hind wheel of dat buggy all de way."

"You saw him, then, when he fought the British at Trenton?"

"Sho's you're born, I did. I held Mossa Gawge's coat an' hat while he fought the British at dat wery place. Mossa Gawge clinched him, and den dey rassled and rassled, and at first he frew Mossa Gawge, and den Mossa Gawge flung him and set on him, and done hammered him till he cried 'nuff! Mossa Gawge won dat fight. I seed him wid me own eyes! An' I come home wid him in de kyars!"

"You weren't with him, though, when he shot the apple off the boy's head?"

"Who wa'n't wid him? I wa'n't? I was de only pusson dar 'ceptin' one white man. I loaded Mossa Gawge's revolver an' han'ed it to him, an' picked up de apple an' et it soon as he knocked it off. Nobody can't tell dish yer ole niggah nuffin 'bout dat circumstance."

"You know all the General's relations, too, I suppose? Martin Luther and Peter the Hermit, and the rest?"

"Knowed um all. Many and many's de time I done waited on de table when Mossa Gawge had um to dinner. I remember dem two gemmen jes's well's if I'd seen um yesterday. Yes, sah; an' I druv um out often."

"I've frequently seen pictures of Washington in which he is represented sitting upon a white horse. Did he really ride a white horse, or don't you recall the color of his horse?"

"Why, bress your soul; 'call de color ob de hoss—'call de color ob it! Do you see dish yer nigh hoss dat I'm a drivin' now, right? Well, dat's de werry hoss Mossa Gawge used to ride. He lef' it to me in his will."

Just then we reached the station, and I dismounted from the hack and paid Washington's body servant for his services. No doubt a longer conversation with him would have revealed other new and startling facts relating to the "Father of his Country."—*Max Adeler in Phil. Post.*

To Prevent Decay of Wood Posts.—The decay of wood embedded in the earth is difficult to guard against, but, according to the *British Farmer's Gazette*, a simple precaution, costing neither money nor labor, will increase the durability of posts put in the ground by 50%. This is simply by taking care that the wood is inverted, *i. e.*, placed in the opposite direction to that in which the wood grew. Experiments have proved that oak posts put in the ground in the same position in which they grew, top upward, were rotten in 12 years, while their neighbors, cut from the same tree, and placed top downward in the soil, showed no signs of decay for several years afterward.

Impermeable Leather.—The following process for rendering leather impermeable, says the Manchester *Mechanical World*, is given by Mr. Jacques, of Hemning, near Sarrebourg. It depends on the property of soap solution being decomposed by acids, and being transformed into fatty acids which are insoluble in water. The leather is dipped before using in a solution containing from two and a half to five per cent. more soap dissolved in water. The tannic acid contained in the leather, more or less, according to the method of tanning, transforms the soap solution into insoluble fatty acids, and renders the leather perfectly impermeable.

Mechanics' Institute Exhibition.—The Seventeenth Industrial exhibition, given by the Mechanics' Institute, will be open at the pavilion for the reception of goods from and after Tuesday, August 1st. The exhibition will open to the public on Tuesday, August 15th, and will continue until Sept. 16th. All goods for competition must be entered by August 18th.

The N. P. C. R. R. will sell excursion round trip tickets to Russian River, good for five days, from July 1st, at the reduced rate of $3.50.

It is expected that the Postoffice Department will have a surplus of $1,000,000 at the close of the fiscal year, June 30th.

The Subdivision of the Electric Light.—In a letter to the editor of the London *Times*, Mr. W. H. Preece, the well-known English electrician, says: There is a great confusion between the problem of the subdivision of the electric "light" and that of the distribution of the electric "current." They are two totally different questions, which are generally mistaken for each other. If a given current, say that equivalent to one-horse power, will give a light, say of 2,000 candles, you cannot by any known means divide that light into 20 lamps of 100-candle power each. The best that has hitherto been done from one-hose power is to obtain 8 lamps of 16-candle power each. You can, however, distribute the current in any way you please. If one-horse power will give you 1 lamp of 2,000-candle power, or 8 lamps of 16 candle power, it is evident that two-horse power will give you 2 lamps of 2,000 candle power, and 16 small lamps; three-horse power, three lamps of 2,000 candle power, or 24 small ones, and so on directly by multiplication and distribution. Mr. Brush has shown how to multiply his lamps, and Mr. Edison has shown how to distribute his currents and multiply his lights; but no one has as yet attempted to solve the question of the subdivision of the electric light. The largest machine yet made—that of Edison—will maintain 1,200 incandescent lamps, giving 16-candle power each, or a total light of 192,000 candles, with an expenditure of 150-horse power. Such a power applied directly to the production of light ought to give a light of many million candles.

Gum from Algæ.—A new method of utilizing marine plants has been devised in France. The plants used are various forms of Atlantic and Pacific algæ, and the product obtained is a gum said to be variously useful in the arts, particularly in the manufacture of leather substitute. The plants are first washed with warm or cold water, or both, the water either being pure or containing 10% alcohol, or any of the following substances: Lime water, carbonate of soda, potash, carbonate of magnesia, or baryta, according to the smaller or larger quantity of cellulose or salts contained in the algæ, which has to be precipitated. Before the extraction of the gum the plants may be dried, ground, broken, etc., according to their nature and according to the requirements. For the extraction of the gum hot water is preferred to cold, and steam to hot water. The extraction takes place in a conical vessel, the plants being placed on a false bottom, through which steam or water is made to pass through the mass. The quantity of water or steam used varies with the quality of the plants—15 to 20 times the weight of the plants will be the best proportion. To facilitate the action of the water for the extraction the plants are subjected to maceration. In order to obtain pure and transparent algæ gum, this must be diluted with much water; then it is left to settle, the temperature being kept at 50° to 60° C. The gum gelatinizes by cooling.

A New Antiseptic.—Prof. Barff, an English chemist, is reported as having announced to the Society of Arts the discovery of a new compound which he calls boro-glyceride, consisting of glycerine, the water of which has been expelled and replaced by anhydrous boracic acid. The new antiseptic (the formula of which is $C_3 H_5 BO_3$), at ordinary temperatures, is a glacial mass, becoming semi-fluid when warmed, and freely soluble in hot water. The solutions employed by Prof. Barff in his numerous experiments on foods vary in strength from 1 in 20 to 1 in 60 parts of water. The London *Times* editorially says that the discoverer exhibited to his audience "a table covered with various articles of food preserved by this method—pigeons, turtle, fruits from Jamaica, sardines from Spain, lobsters, herrings, sprats, fowls, pheasants, a tongue, oysters, beef and mutton." These had "all been kept for periods ranging from a few weeks to several months, and in none of them, either to the taste or smell, was there the slightest evidence of decomposition."

Wooden Thread.—The manufacture of thread from wood for crochet and sewing purposes has, it is said, recently been commenced in the middle of Sweden. It is wound in balls by machinery, either by hand or by steam, which, with the labeling, takes one minute and 12 seconds, and the balls are packed up in cardboard boxes, generally 10 in a box. Plenty of orders from Sweden have come in, but as the works are not in proper order, there has hardly been time to complete them all. The production gives fair promise of success, and it is expected to be very important for home consumption.

Ebonizing Wood.—Some one connected with one of the largest furniture manufactories in New York has devised a new process of ebonizing cherry wood, which appears to be much superior to any other, and which is being used to great advantage by the firm. The process has not been patented, but is kept secret.

Testing Planer Knives.—A set of new knives should be carefully tested to see that they are correctly balanced, and kept so. A knife slightly out of balance throws the cylinder out, makes rough work and wears the bearing. This, when once started, grows rapidly worse, and getting the knives back to balance does not remedy the matter. Both the spindle and boxes are brought to that state where a machinist's services are necessary to re-turn and balance the cylinder.

How to Resuscitate Drowning Persons.

The State Board of Health has issued from Sacramento a circular respecting the resuscitation of persons supposed to be drowned, of which the following is a copy:

The season for deep water, especially sea, bathing being at hand, the State Board of Health issues the following advice and directions, which may be profitably adopted in case of accident by drowning. They are simple, always available, require no delay, and can be effectually practiced by any intelligent person until medical aid can be obtained. Many lives are annually lost by drowning through ignorance on the part of bystanders of the proper method of restoration, and many sacrificed by the use of inefficient and improper means. The plan of treatment is the "Diret method" suggested by Dr. Howard and adopted by the New York Life Saving Institution.

1. Instantly turn the patient downward, with a large, firm roll of clothing under his stomach and chest. Place one of his wrists or arms under his forehead, so as to keep his mouth off the ground. Press with all your weight, or with a force proportioned to the age of the patient, two or three times, for four or five seconds each time, upon the patient's back, below the shoulder-blades, so that the water may be pressed out of the lungs and stomach, and drained freely out of the mouth.

2. Quickly turn the patient, face upward, with the roll of clothing under his back, just below the shoulder-blades, so as to make the head hang back as low as possible. Place the patient's hands above his head, where they may be secured by a handkerchief or cord. Kneel with the patient between your knees, and fix your elbows firmly against your hips. Now, grasping the lower part of the patient's naked chest, squeeze his two sides together, pressing gradually forward with all your weight for about three seconds, until your face is nearly over the face of the patient. Then with a push suddenly jerk yourself back. Rest about three seconds; then begin again, repeating these bellows-blowing movements about 8 or 10 times a minute for at least one hour, or until the patient breathes naturally. By these alternate movements foul air is pressed out of the lungs and pure air is drawn in.

The above directions must be used on the spot the first instant the patient is taken from the water. Lose no time. A moment's delay and success may be hopeless. Observe that neither apparent death nor much delay in the appearance of the signs of life afford just grounds for despair. Perseverance is often rewarded by success, even after an apparently hopeless prolongation of insensibility. Act promptly and steadily, following closely the rules given. Prevent crowding around the patient. Fresh air is essential. Should the patient commence to breathe, be careful not to interrupt the first short natural breaths. If they be long apart, carefully continue between them the bellows-blowing movements as before. After breathing is regular, let the patient be rubbed dry and wrapped in warm blankets. As soon as the patient can certainly swallow, a little warm spirit and water may be given. This should be done cautiously, lest the patient may be choked. After restoration, let the patient be kept quiet and sleep encouraged.

The above rules are intended for adoption in the case of adults. For younger persons the force applied should be modified to suit the age, "the operator feeling his way as to how little or much he is doing, or may do, and regulating his course accordingly."

FAHRENKRUG'S ERADICATOR.—This natural mineral water was discovered by an accident. F. W. Hatch, M. D., permanent Secretary of the State Board of Health, says it is the most wonderful natural water supply which has ever been brought to his notice. The analysis of Dr. Price shows at once sulphur, salt, carbonate, alkaline and slightly ferruginous water. It is one of the remarkable discoveries of the age, and hundreds have been permanently cured of rheumatism, catarrhal affections, diseases of the kidneys and liver, dyspepsia and neuralgia, as appears from sworn testimonials A company has been incorporated to furnish this valuable mineral water under the name of California Volcanic Water Co., and establish a depot at the corner of Third and Howard streets. Bro. F. Renchler, of the Indianapolis Chair Manufacturing Co., is one of the incorporators.

WHAT IS MEANT BY 150,000,000 TONS OF COAL.—Not less than 154,184,300 tons of coal were taken out of British mines last year, and to do this work 495,000 men were employed. Sir Henry Bessemer has been endeavoring to make people realize what that quantity of coal really is. He says that if this coal were formed into cylindrical columns 50 ft. in diameter and 500 ft. in height, and if these were placed in a row their own diameter apart, they would make a colonnade 85 miles 750 yards long, the product of each working day being sufficient to make 14 such columns. Another method of giving some idea of the immense nature of the British coal industry is this: The coal extracted last year would make a wall 200 miles long, 100 ft. high and 41 ft. 11 inches thick, a mass exceeding that of the great wall of China by enough to add 346 miles to its length. And yet so vast are the British coal deposits it is estimated that they will yield the present output for 800 or 1,000 years to come.

The Earthquake.

The severest earthquake which has visited the State since 1868 arrived on Tuesday morning at about half-past five. It frightened timid people, but did no bodily harm, as far as we have heard. The most interest in the event seems to have been manifested in San Jose, where hundreds of people rushed into the streets, many of them in their night toilets. The vibration of the earth was, apparently, from east to west, and lasted, with decreasing severity, during about 20 seconds. There was first a severe shock or jerk, followed by a rolling movement and then a gradual settling. In many parts of the city the buildings suffered more or less, the plaster being loosened and the walls cracked. The court house withstood the shock without any injury, but the walls of Welch's brick building, on First street, those of the Home Mutual Insurance Company, on Santa Clara street, the Normal School and others were more or less cracked. The Normal School suffered the worst, the walls being cracked in several places; in one place a cross section of the wall being separated entirely from the main wall running east and west. The building, however, is not damaged so as to render it unsafe. In other places, further west, the shock is reported as much more severe. In the Santa Cruz mountains reports come of broken windows and over-turned chimneys. One man reported the shock so severe where he was, in the mountains, as to throw him to the ground. No persons are reported injured.

The vibrations seem to have been more marked near the coast. At Stockton the shock was very slight.

A PIANO TUNER'S EXPERIENCE.—There is no profession requiring more skill and none in which more frauds are practiced. Pianos should be tuned at least three times a year, when the practice is once in three years. Usually on some festive occasion Prof. Blank wishes the piano tuned to concert pitch, when the rattletrap will not stand it. In this case, when assured by a conscientious piano tuner that the bridge and strings will not stand it, the mountebank is ever ready to assure the simple people that he can do it; when in fact the piano is left in a worse condition, if not in a measure ruined. In any and all cities, either large or small, there are very few skillful, conscientious and reliable piano tuners. Bro. G. Rudolph, No. 107 Stockton St., has had an experience of 25 years in his profession, and is known to the professors of music as one of the best in the city of San Francisco.

FRANK P. LATSON & Co., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery St., under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc., and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

BRO. C. S. LAUMEISTER, proprietor of the Laumeister mills, 203, 205 and 207 Mission street, has added to his mills the best and latest improved machinery for the manufacture of breakfast cereals. His long experience and close attention given to this growing industry, with improved facilities, will be a warrant that this old and popular brand will be a guarantee that his meals and prepared cereals are the best in this market.

EXCURSION

TO ALASKA.

The August trip of the Steamship IDAHO to Alaska will be made a special feature of interest for tourists and pleasure seekers. In addition to her regular ports of call (Wrangel, Sitka, Harrisburg, etc.) it is intended she shall visit Glacier Bay and other points of special interest.

The trip from Puget Sound to Alaska, instead of being, as many imagine, rough and tempestuous, is made nearly the whole distance on inland waters, which are as smooth and unruffled as a mountain lake. The scenery is a magnificent panorama of wondrous grandeur. The noted and celebrated points of interest in California and other States dwarf into insignificance in comparison with the wonderful sights and towering mountains in this wonderland of glaciers, icebergs, Aurora Borealis and nightless day. Only a limited number of passengers can be taken from San Francisco, as a large number of tourists have engaged to go from Portland, Victoria and other northern ports.

Those desiring to engage passage will please register their names at the Company's Ticket Office, 214 Montgomery street. No name accepted unless accompanied by a deposit of $20 on account.

The fare for the round trip has been fixed at a low rate of $115, which includes meals and a berth.

Passengers will take the DAKOTA, which leaves Broadway Wharf July 29th, at 2 P M., and transfer to the IDAHO at Port Townsend about August 3d, reaching San Francisco on the return about August 25th.

GOODALL, PERKINS & CO.
General Agents.

A PUBLISHER WANTED.

A good printer, or a steady and able business man, with a good reputation and a little means, can purchase (at less than two-thirds its value) the whole or a part of a long and well-established and paying newspaper and job printing office, in one of the rising business centers of this State.

Principals only need apply, (and that soon) to DEWEY & CO., at the office of this paper.

P. S.—A first-class printer can secure a permanent situation by applying soon. Also, a steady country boy a situation as janitor.

Hardening Steel.

The effect of occluded gases in iron and steel, says *Engineering*, is now being carefully studied by metallurgists in general, and a committee of the Institution of Mechanical Engineers recently raised the question in one of its reports as to whether the hardening and tempering of iron and steel might not be produced by the expulsion of occluded gases during the heating process and their subsequent exclusion by the sudden cooling and contraction. Prof. Chandler Roberts has undertaken to answer this question, and by heating rods and steel in vacuo by means of the electric current, and suddenly quenching them in cool mercury, he demonstrates that steel will harden when there are no gases to absorb. The metal was, of course, robbed of its occluded gases by means of an air pump connected with the vacuum chamber, and the parts which were quenched in the mercury were found to be glass-hard, while those which did not reach the cold fluid were found to be quite soft. Prof. Roberts, therefore, concluded that gases do not play any part in the process of hardening and tempering. Prof. Hughes, who has made numerous experiments on the subject, believes that the temper of steel is due to the chemical union of the iron with the carbon. At low temperature this union takes place only in a slight degree, and hence in soft steel we have the carbon keeping aloof from the iron; but as the temperature is raised the combination is furthered, until, in the case of gray or hard steel, we have really a kind of diamond alloyed with iron. Sudden cooling is necessary to fix the combination, for in slow cooling the carbon separates from the iron. This theory is a very promising one, and is supported by a variety of facts, Mr. Stroh, for example, having observed that when an electric spark passes between two iron contact pieces and fuses them, the fused part gets diamond hard and will scratch a file.

MRS. DUNMIRE, Guiteau's divorced wife, denies seeking a pardon for Guiteau.

Riveting.

In a report on riveting in locomotive boiler work, made by a committee of the American Master Car Builders' Association, is found the following: The operation of "driving" rivets consists in placing a set on the end of the rivet, and sledging it down to form the head, the operation requiring two men to sledge—one to hold the set, one to manage the holder—and a boy to heat the rivets. The rivet is not struck direct by the sledges at any time during the operation of driving, but the head is formed entirely by driving the set down squarely on the end of it. To drive a rivet requires about 24 blows with the nine-pound or ten-pound sledges, at the rate of about 80 blows per minute; a flatter, with a face about one and one half inches square, is then placed on the lap alongside the rivet, and given five or six blows to close the sheets together; the set is then placed on the rivet head again, and given five or six more blows, and the rivet is finished, the whole operation of driving requiring about 35 seconds of time to the rivet. In practice we find that a riveting gang will drive in the seams of the shell of a boiler an average of 30 rivets per hour, or 300 per day, and in the seams of the fire-box, in throat and back sheets, dome, mud ring, braces, etc., an average of about 22 rivets per hour. This includes the time necessary for taking out bolts, drifting holes, adjusting the tools and work. In hand riveting, two riveters will drive, on an average, taking the whole boiler, only about 125 rivets per day, or 12½ per hour.

THE Oregon salmon packed to June 1st was 136,000 cases, about 330 lighter than last year up to that date. The number caught was up to the average, but a considerable proportion were small. The opinion prevails among cannery men that last year's pack, 550,000 cases, will nearly be reached this season. Eleven deaths by drowning among fishermen are reported to date.

Important Astronomical Observations.

Interesting and important results are reported from the English, French and Italian observers who went to the village of Soham, in lower Egypt, to observe from that point the solar eclipse of the 17th ultimo. The parties were favored with fine weather, and though the totality of the eclipse continued but 72 seconds, yet in that extremely short space of time very much of scientific interest was acquired.

The first thing noticed was a small comet very near the sun, which, from its location, could not have been the one which for some weeks has been attracting the attention of observers all over the world. The comet was photographed, and its picture will afford a study of much interest in the future.

The second, and much the most important item of interest, was the darkening of the lines of the spectrum, as reported by the French party, giving evidence of a lunar atmosphere. If this observation is substantiated, it will effect a revolution in the direction of lunar physics, and relegate our moon from her hitherto supposed state of death and desolation to one of at least comparative life and physical activity.

The third item of marked interest is the announcement that the spectrum of the sum's corona was photographed for the first time. If this was successfully done, we may from this hope for increased knowledge of the constitution of the sun's magnificent appendage, seen only in a total eclipse, so grandly beautiful as to make the beholder feel like veiling his eyes in the celestial presence. The corona, with its silvery light, its spreading wings, its circles, arches and curves stretching out into fathomless depths around the darkened sun, is considered as one of the most impressive and awe-inspiring sights in which celestial majesty and grandeur are ever embodied. Its constituents and office in solar economy are problems whose solution is much desired.

According to the *Scientific American*, the English expedition, with Prof. Lockyer as the chief director, laid out an organized plan of operations. Some of their points of observation were to note if the abundance and activity of the rosy protuberances gave proof of the present disturbed condition of the sun while passing through its maximum period of sun spots; to compare and detect the difference in the spectra of rosy flames and sun spots; to get an idea of the physics of the solar atmosphere—that is, to find what it looks like; to study—if the expression may be used—its circulatory system; and to determine its chemical nature, especially if the chemical elements existing in the sun are dissociated or separated by the intense temperature existing there. Special attention is now directed to solar physics and chemistry, in consequence of the bold and ingenious theory of Dr. Siemens on the conservation of solar energy.

Photography was greatly relied upon in the solution of these intricate problems, and so much have methods improved in the rapidity with which the image can be impressed on the sensitized plate that seconds will now record more than minutes did 20 years ago. The telescope and the spectroscope were combined with the photograph in the attack on the sun's surroundings during the eclipse.

There is every reason to hope for unusually noteworthy results to be obtained from this eclipse, observed with the best astronomical instruments the world can furnish, and with astronomers of world-wide renown to use them effectually under the cloudless sky and in the serene atmosphere of the station on the Nile. We have still to hear from other stations on the line of totality, and to wait for fuller details and photographs that will tell us still more of the good news from the observations of these scientific parties.

A BAD cold will run its course of about 10 days in spite of what may be done for it, unless remedial means are employed within 48 hours. Many a life will be spared by cutting a cold short off in the following manner: On the first day there is an unpleasant sensation of chilliness. The moment you observe this, go to your room, and keep it at such a temperature as will entirely prevent this chilly feeling, even if it requires 100° Fahr. Put your feet into hot water half-leg deep, adding hot water from time to time for a quarter of an hour, so that the water will be hotter when you take your feet out than when you put them in; then dry thoroughly and put on thick woolen stockings; for 24 hours eat no food, but drink freely of any kind of warm teas, and at the end of that time, if not sooner, the cold will be effectually broken, without any medicine whatever.

Points of Difference.

The chief difference between the old-line life-insurance company and the Fraternal Benefit Society is that in the latter you have a brother's care and protection, while in the former you submit yourself to the tender mercies of a corporation. It is pure maliciousness for any one to say that a Fraternal Society cannot manage an insurance department among its members. Why should they not be able to furnish insurance cheaper, if they do not calculate on an immense profit? It needs no long array of figures to prove that they can do so. Common sense will tell the unprejudiced that such is the case.

But if, perchance, the old-line company should be able to furnish its insurance just as cheap, how does it come about? In this way: Whenever it is possible for them to repudiate by any technicality they will do so; no mercy will be shown the policy holder, no kind regard for his interest. If a brother in a Fraternal Society is unfortunate, he is usually assisted in a substantial and friendly manner; but, if a policy-holder in an old-line insurance company is unfortunate, the probability is that he will be kicked out, lose his policy, and all that he has paid on it.

It is true, the policy holder is not bothered with Lodge meetings, but one is amply repaid for this annoyance, if annoyance some might choose to call it, in the friends and acquaintances one makes, and the business advantages offered, to say nothing of the fact that the secret society affords an excellent means of communication among strangers and in a strange land. That there are some fraternal societies being established which do not merit the confidence of thinking people, cannot be denied; but, in this, as in all other undertakings, we find chaff as well as grain. And in this connection, although we cherish the best of good wishes for the success of a limited number of other Orders, we certainly have a right to say that, taking into consideration the time we have been in existence, and the excellence of the abstract principles which form the foundation of our beloved Order, that we are second to no other organization. A deep consideration, too, of the rise and progress of the Order, would seem to indicate that the secret of our success lies not in our excellent beneficiary department, not in our mystic word, Protection, not in the noble Charity. It lies in a principle so ancient and so sacred that it should be whispered in your ear. But our very name betrays it, we are "Workmen"—all, high and low, rich and poor, officer and citizen, meet in our Lodge-rooms on a common level, and grasp the hands of one another; the rough, hard hand of toil is welcome in our halls, as the daintiest that wields the pen.

This, then, is the secret of our success, and this it is that, if we follow it, will lead us on to imperishable glory, henceforth and forever more. We are "Workmen," all in a common cause, and we recognize the fact that when the Supreme Master calls us to the throne above, the most that any one can say is, "I have been a good and faithful Workman, I scorned my brother not on earth. I await the commands of the Mighty Master."

WE had the pleasure of meeting Bro. C. P. Weldon, M. W. of Gilroy Lodge, 26. This Lodge has now 67 members and is increasing in members faster now than at any time since its organization.

THE average age of members admitted to the Order during the year 1881–82 was 36 years; average age of those dying, 40 years.

A Vista.

Our engraving shows a vista, such as can be obtained in many parts of California, for the the State has a wealth of hills and narrow valleys, as well as vast seas of area of unbroken level. One can climb the hillsides from north to south, and gain sights of lovely valleys, over

AT THE EDGE OF THE WOODLAND.

which farms are spreading, and where homes, churches and schools are being planted. He will find noble trees shading immense rocks, and he will not tramp far in some parts of the State before he may see the deer or hear them bounding through the forest before him. The scene is fit to awaken longings for the enjoyment of wild life. One can almost hear the sounds and inhale the fragrance of the forest.

WE met Bro. James Frizell, M. W. of Dixon Lodge, No. 50, at San Francisco Lodge room. Dixon Lodge is in a very thriving condition, and Bro. Frizell expects that the 60 mark will be reached this term.

LOS ALAMOS, No. 219, was instituted at Los Alamos, Santa Barbara county, June 9th, by Deputy Thomas Nixon, with 16 charter members. The following officers were elected: Ellery D. Perkins, P. M. W.; James A. Mitchell, M. W.; Alex. Leslie, F.; Peter S. Cayner, O.; John A. Purkiss, Rdr.; Henry Watkins, Fin.; Daniel Coiner, Rvr.; Thomas F. Johnson, G.; Samuel T. Coiner, I. W.; Joel Hilton, O. W.

W. I. MCKAY, Deputy, installed the officers of Bay View on Friday evening, July 9th. The Grand officers assisting were B. T. Ellis, G. P. M. W.; H. H. Russell, G. F.; Harry J. Lask, G. Guide. After installation services Harry J. Lask, in his happy manner, presented Bro. Geo. T. Shaw, P. M. W.; B. F. Ellis, P. M. W., and Henry Lehrke, Rvr., fine enameled watch charms. They were made by the artist, Bro. Gus Pohlman. On each is engraved the usual inscription. After this happy surprise the whole company sat down to a banquet which was prolonged until a late hour.

Vital Statistics.

The special committee on graded assessments, whose report and recommendations were received and adopted by the late Supreme Lodge, no doubt did the most sensible thing imaginable under the circumstances. They declared themselves to be unable, lacking, as as they did, both time and data on which to base any system. They, therefore, recommended that a standing committee of three be appointed, to be known as the "Statistical Committee," of which the Supreme Recorder shall be ex-officio chairman, whose duty it shall be to collect and compile such statistics as may be available, bearing on the mortality of co-operative and fraternal benefit associations, as the experience of the Order.

There is no doubt that this committee will collect much valuable and interesting information, not only to the members of our Order, but to the general public, also. It is well that this matter has thus begun early in the history of our Order, as in the far distant future it may prove not only a source of pleasure and instruction to the coming generations to look over the vital statistics of the past, but also a means of profit and advancement. Another matter which appears to be exciting some of our contemporaries is a supposed increase in the length of human life.

The Committee will no doubt be able to throw light on this subject, as it is one of universal interest. There appears, however, to be good reason to believe that our lease of life is being lengthened.

There has never been a time, since the Christian era began, when there were so many very old people as the last half of the nineteenth century exhibits. Men and women die at all ages now as they used to do, but most of them live longer, and more of them live to a great age, than was the case a century or more ago. Only the other day Mr. Wm. Gaylor Gordon died in Morrow county, O., aged 114 years! Scarcely less remarkable is the report in the papers of Mrs. Catharine Albert, who is still living near Bakersville, Coshocton county, O., at the age of 108 years! Many of the long-settled neighborhoods contain similar cases of the extension of life far beyond the allotted span. If these cases had occurred in 1782 they would have been historic, as famous instances of longevity; but now they attract scarcely more than a passing notice, for centenarians have become so common among the people that they have ceased to be regarded with wonder.

RELIEF COMMITTEE.—The semi-annual meeting of the Relief Committee was held at Pythian Castle, on Saturday evening, July 10th. Delegates from 18 Lodges were present. The reports of the Secretary and Treasurer were received and showed a great deal of work done. From the reports we make the following summary: During this term nine Workmen, who held membership outside of this city, have received pecuniary aid, 11 were secured positions, and eight were recommended, but failed to report. The efficient Secretary has sent 419 communications officially. There is now $235 in the Treasurer's hands. The following officers were elected: E. M. Reading, President; A. V. Thompson, Vice-President; C. C. Gilmore, Secretary; G. Winehill, Treasurer.

J. MEREDITH DAVIES, member of the Grand Lodge of the jurisdiction of Iowa, has withdrawn his membership, and will deposit his card in some of our city Lodges.

Home Miscellany.

Peace.

Ceaseless the sea waves throbbing leap
Against the dark rocks fierce and steep;
Yet they have islands crowned with palm,
And there are calm,
There lie and sleep.

Though the hills plead for gift of rain
To save their blossoms, oft in vain;
Yet they have springs whence rivers start
To find the heart
Of seas again.

Though friendship, at a man's earth-death,
Is poured in eulogizing breath;
It may be when he opens eyes
On angels wise
No word he saith.

—*Charles H. Shinn, in Californian.*

The New Cook.

"There is one thing you mustn't forget, Tom:"

"What's that, Emma?"

"Don't forget to go to the registry office and send me up a cook. The new girl is good for nothing, and the old one can't do everything. Young or old, man or woman, I don't care, only send me up a competent cook by 10 o'clock this morning."

"Don't look so desperate, sis; I'll remember it. I want things in pretty good style for Maxwell; he is used to it—is fond of good dinners; and I guess I'll send you a good, smart cook, Emma." Mr. Thomas Maye disappeared with a re-assuring nod. He had a proverbailly bad memory; pretty Emma Maye knew it very well, yet in this desperate emergency she trusted him.

During the two years she had had charge of her widowed brother's family they had been blessed by the most skillful of cooks; but Joan had taken a fancy to get married, and her place was hastily supplied by one who soon proved incapable.

Just at this juncture Mr. Maye received tidings that his dead wife's favorite brother, Arthur Maxwell, just returned from abroad, would pay him a visit. From the first, Emma had been nervous over the responsibility of entertaining this elegant young man, whom she had never seen. She was lovely and accomplished; but she could not cook—in fact, she had never tried.

It was 7:30 o'clock when Mr. Maye went to town. He took nothing but a cup of coffee at 7 o'clock, and lunched at his favorite restaurant at 11 o'clock. At 3:30 o'clock the Mayes dined, and Mr. Maxwell was expected by the 3:10 o'clock train.

"There!" sighed Emma, when, two hours after her brother's departure, the house was in its usual exquisite order, and the viands and flowers sent up for dinner; "if Tom doesn't forget, and if he sends up a good cook, everything will be nice enough."

She did not dare think of the possibility of Tom's having forgotten, or that of the cook not coming for any other reason; but when, precisely at 10 o'clock, the door-bell rang, a secret weight was lifted from her heart. She ran herself to answer the summons. A medium-sized, well-dressed, modest-looking young man stood at the entrance, and she brightened at sight of him.

"I am very glad you are so punctual; I was afraid I should be disappointed," she said, leading the way to the kitchen without an instant's delay. "Let me see—10 o'clock. I shall have to set you at work at once to prepare a first-class dinner. We are expecting company from London, my cook has left me, and I do not myself know anything about cooking. What is your name?" literally bereaving the young man of his hat and hanging it as high out of reach as possible.

His reply was rather faint, but she thought she caught it.

"Mac? You do not look like an Irishman. But it doesn't make any difference. Are you a good cook?"

The smile of the young man was rather puzzling. "I'll do my best," he said, pleasantly.

"You see, there's nothing in the house but cold chicken," continued Emma, unconsciously wringing her little hands as she continued to address the new cook, who listened very attentively. "But my brother has sent up some pigeons—to be roasted, I suppose?"

"Yes'm."

"Can you make a celery salad?"

"I think I can."

"And Mayonnaise sauce for the cold chicken?"

"Yes'm."

"Can you make French soup?"

"I can."

"Oh, well, I think you will do" (beginning to look relieved).

"Be sure the vegetables are not overdone, and the coffee good—my brother is very particular about his coffee. And we will have a Florentine pudding?" with an inquiring look.

"Yes'm," readily.

The new cook was already girding himself with one of the white towels that lay on the dresser, and casting a scrutinizing glance at the range fire.

Quite reassured in spirit, Emma was turning away when she stopped to add:

"I will lay the table myself to-day, Mac, and fill the fruit dishes and vases; but if you give satisfaction, I will entrust you with the key of the china closet, and you will have the entire care of the table."

And with a gracious nod, the young lady withdrew from the kitchen.

She piled the fruit dishes with rosy pears, golden oranges and white grapes; filled the vases with roses, lilies and ferns; set clusters of dainty glasses filled with amber jelly among the silver and china, and then, with a sigh of satisfaction at the result, ran away to dress.

"I'll not go near the kitchen to even smell the dinner. I don't know anything about cooking it, and will trust to luck. I have an idea that Mac is really capable—is going to prove a treasure. His dress was so neat, and he was so quiet and respectful," concluded Emma, leisurely arranging her hair.

Her new dress, with its abundant lace and cardinal ribbons, was very becoming, and fitted the petite, round figure so perfectly that Emma felt at peace with all the world.

"I have heard that Mr. Arthur Maxwell is very fastidious in the matter of ladies' dress," mused Emma, twisting her head over her shoulder to see the effect of her sash. "I wonder what his first impression of me will be? I should like to have poor Ally's brother like me."

At length the last bracelet was clasped, the last touch given, and retiring backwards from the mirror with a radiant face, Emma turned and ran up to the nursery to see the children dressed for company, and also to speak with the boys—and, it must be confessed, flirt a little with Mr. Vincent, the tutor, who was always at her service for this exercise.

There was a delightfully savory odor pervading the house when she came down and set out the wine and ice and made a few additions to the table.

She looked at her watch—3:5. Then she went softly to the end of the hall and listened to the lively clatter in the kitchen. She could hear Mac chatting pleasantly with the little housemaid, Nanny, and all seemed to be well in that direction.

At 3:10 she repaired to the drawing-room and took a seat overlooking the street.

Carriages came and carriages went, but none stopped at the entrance.

The little girls, brave in new ribbons, came down.

The boys and Mr. Vincent came down.

Mr. Maye's latch-key settled in the door; the dinner-bell rang.

"Not come?" asked Mr. Maye, at sight of Emma's disappointed face.

"No!" she pouted; "and such a nice dinner!"

"Very strange!" mused that gentleman, leading the way into the dining-room. "I hadn't the least doubt—Why, my dear fellow," seizing by the shoulders the new cook, who, acting also as butler, had just placed the soup-tureen upon the table—"my dear, dear fellow, why, how is this? Emma declared you hadn't come!"

That young lady grew as white as the tablecloth, and grasped a chair for support.

"That Mr. Arthur Maxwell! I—I thought it was the cook!"

"I came earlier than I expected, and in time to make myself useful to Miss Emma," laughed Mr. Maxwell, divesting himself of his white towel and bowing with grace to that young lady.

How could she have fallen into such an error?

"I was so terribly anxious—I didn't look at you twice. Mr. Maxwell, I hope you will forgive me!" stammered Emma, as red now as she had been pale.

"There is nothing to forgive, if my dinner turns out well," he added, laughing, evidently the sweetest-tempered man in the world. "I learned to cook when I was a student in Paris—a Frenchman taught me. I have been rather proud of my culinary skill, but I am a little out of practice now, and am not quite sure of the Florentine."

"Emma," cried Mr. Maye, "what does all this mean?"

"Why, John, you promised to send me up a man cook."

Mr. Maye clasped his hands tragically.

"Emma, I forgot it."

"Well, he came just at 10 o'clock. I thought he was the cook; I ushered him into the kitchen, among the pots and pans. I questioned him as to what he knew about cooking. I urged him to make all haste and serve the dinner; and—and I called him an Irishman!" sobbed Emma hysterically.

"No offense, Miss Emma. My grandfather, on my mother's side—Major Trelawny—was an Irishman," observed Mr. Maxwell, coolly. "And since I have done my best, won't you try the soup before it is cold?"

The others stared and Emma cried, but Mr. Maye laughed—laughed uproariously.

"The best joke of the season! Sit down, everybody! Emma, you foolish girl, don't cry. Arthur doesn't care. And as for your Florentine—Arthur, tell Nanny to bring it in. The proof of the pudding is in the eating, you know."

"Miss Emma won't cry when she tastes my soup," remarked Arthur, ladling it out promptly with an air of pride.

And then they all fell to tasting and praising, and urging Emma to taste and praise, until she laughed and cried altogether.

But Mr. Arthur was so delightful, so winning, and so witty, so kind to his agitated young hostess, and he'd cooked such an excellent dinner—from the pigeons to the pudding, everything was perfect.

By-and-by Emma was herself again.

"This has taught me a lesson," she said. "I never will be so desperately situated again. I will learn to cook."

"Let me teach you," said Arthur.

He did.—*Argosy.*

Flirtation.

I have often been astonished by considering the number of young people—and I regret that my regard for truth compels me to state, sometimes those of middle age—who participate in this dishonorable practice. Much of it is the result of never having seriously examined the subject. I propose to give some thoughts upon flirtation, with the hope that they will lead some one to think of it in its true light.

Flirtation is trifling in love. In the first place, flirting is wrong because it necessarily involves deception and theft. The object of flirting is to gain the affections of another by leading him or her to believe that they have received our love in return, when such is not the case. In other words, it is an effort to gain, through false pretenses, that for which nothing is given in return. This involves falsehood, both by word and act. Is it right for a person to perjure him or herself for the sake of gaining property? Certainly not. Surely it is not less disgraceful for one to make false statements merely for the pleasure it affords a degraded mind to trample upon the most sacred feelings of the human heart. It is plainly taught in the "Book of Books," and admitted by every unprejudiced mind, that falsehood is always sinful and dishonorable. An eminent author has said: "Every brave man is a man of his word; to such base vices he cannot stoop, and shuns more than death the shame of lying."

It is assumed by Christianity that people are to live for character; that they are to maintain their truthfulness and nobility of mind at the expense of personal comfort, reputation, and even life itself. If a man may sacrifice his word for any cause, for the same reason he may sacrifice any other moral virtue at will. Perfect truthfulness is the first essential to a perfect character. As society is now conducted it is exceedingly difficult for people to always speak the truth, but it can be, and is done.

Love is the deepest, most sacred feeling, of the human heart, and should never be regarded lightly; for true love is a solemn, a holy thing. Love, and love alone, should lead to courtship, which candor and sincerity should ever characterize. If a person has the right to trample upon and insult the most sacred feelings of another, merely for the sake of his own selfish gratification, has he not on equal right to deceive, impose upon and insult him in any other way he may see fit? Is it not better to take from others worldly goods, which, by effort, may be regained, than by falsity to snatch from them that which, when once lost, returns no more forever—a happy, trusting heart—so to shock their confidence in their fellow-creatures as to cause them ever afterward to regard others with a degree of suspicion which is seldom overcome.

Flirtation always causes pain to the honest party; it adds greatly to the suffering of others, hence it is wrong. No noble, generous person will willingly and unnecessarily cause another pain.

The woman who would encourage the attentions of an honest suitor, for the purpose of glorying in the knowledge of his disappointment, is unworthy of the holy name of woman, and should be, as Pope has aptly said: "Alive, ridiculous; and dead, forgot."

Reverse the picture; a female flirt is bad enough, but a male flirt ought, in justice, to be banished from good society. Few reach the years of maturity without feeling the influence of love, and often this is the turning point in life. Few people realize how many lives have been wrecked, how many hearts rendered reckless and desperate from having been the victim of some innocent (?) flirtation. But who has not seen the light-hearted and beautiful maiden, who, in love and confidence, had bestowed her affections upon a suitor whom, in her own sincerity of soul, she believed to be all that is noble and honorable, changed to a pale, distrustful woman when he whom she deemed so noble is revealed to her as a villian by the knowledge that he was "only flirting?"

How many intelligent, noble men have been driven to the verge of desperation by the shock of knowing that she who was their ideal of all that is true and womanly, and whom they held dearer than life, is a fickle coquet? People may say that if they have courage they will overcome such feelings, and often, after long and painful strife between the deepest feelings of the heart and a strong, brave will, the feeling is conquered, but memory will revert to the anguish which the struggle cost them. Then, there are others who have not power or strength of will to thus overcome their feelings. The world may sneer at them, nevertheless the human heart is a thing incomprehensible, and that often will not yield to the will. So the victim carries through life a saddened, disturbed heart.

Flirting is wrong, not only because it harms others, but because it destroys the goodness of mind of those who engage in it. To conscience, to nobility and purity of heart, it is a deadly poison. But, is it not right to trifle with a flirt for the sake of revenge? Because others do wrong is it any reason why one should sear and destroy one's own nobility of mind? Besides, God has said, "Vengeance is mine, I will repay."

As to a mutual flirtation, there is no such thing; it is a contradiction in terms. Flirtation is a trifling or deception in love; if there is no deception or love on the part of either party there can be no flirtation. In all cases of so-called mutual flirtation there is always a striving by each party to gain the affections of the other, and they usually result in hatred and pain to both parties.—*Julia M. Goodlett, in Rural Press.*

More Heroes.

The two men, William Bennett and Dennis Callahan, who lost their lives in the attempt to reach and rescue those confined in the Alta mine, have enrolled their names upon the scroll of heroes who were not born to die. They well knew the risk, and they went boldly forward. Facing the canon's mouth, or riding into the jaws of death, amid shouts and cheers, the trumpet's blare and crash of cymbals and drums, attended with all the pomp and circumstance of glorious war, is brave, but far braver is the man who faces the deadly gases and gurgling waters, and all the unknown choking fiends of darkness, to save life, and not to take it. Let no man say that heroism has left this world, while such men live and die for men. Their bravery hallowed the world they have left, and ennobles the lives of all beholders. All men are proud to call such heroes brothers.

Is it ever too late to add our voices to the general chorus in praise of a worthy act of a noble fellow creature. Although many have spoken in fitting words of such a noble act as that of the two men, Wm. Bennett and Dennis Callahan, mentioned above, it is meet that it should again be brought before the public mind for it to think of and relate to the children of the rising generation. The rehearsal of such deeds inspires young readers to cultivate their powers of endurance and bravery. Bravery that will cause a man to enter the terrible gases of a mine, to undertake the almost hopeless task of saving a brother, should be extolled from the house-top, and his praises sung by every tongue and pen in the land. Those living in the same place should be proud to say they had breathed the same air as supported such noble souls. C. D.

An "Incher."—"Yes, I went to church yesterday," said Job Shuttle, with a yawn. "Pretty good sermon, pretty fair; but what pleased me most was the antics of an inch worm that was roaming about the hat of a lady who sat in front of me. That little, pale green incher reminded me so much of the way we human worms get on in the world. You see, he was on the vane of the feather in the hat and he would get a good hold, and then reach up with his head and feel around and look the field over to see where he could make a good strike, just like a man looking for business; then he would throw himself soul and body on to a curl of the feather, which would bend and let him down with a thud, just like a man who has made a bad speculation; then he would wriggle and twist and feel around for a new hold, just like a man trying to 'fix things' with his creditors; then he would mount to the very topmost summit of the hat and stick his head up and swing all around, just like a newly-elected Congressman gazing over the heads of his constituents; finally he got along on the lower edge of the turned-up hat-brim, and then he made progress; he inched along, and inched along, making big strides right ahead, just like a man picking up money and making a fortune hand over fist; but the little incher wasn't satisfied. Just as he got as far as he could he 'broke all up' and tumbled, and we saw him no more; for all the world just like a man who has done his best for a little while and then 'flunked.'"

The Old Home.—A large proportion of our girls who read this will some day love and marry. It is well; it is right; but do not be in a hurry to be grown up and away from home. Life will never give you anything sweeter, better, happier than you have now—no love purer than your mother's, no care more kindly than father's, no companionship like that of your brothers and sisters. Even to the man who loves you, you will not be the little Lily who was a baby once—who learned to walk and prattle, and was prettier than any other baby ever was—nor the little girl who was so wonderful a genius when she played her first tune on the piano or worked her first book-mark. He who falls in love with you may have known twenty other pretty girls, and have been, perhaps, at some time, in love with half of them. In some things you will fall short of some one he has known. Your eyes will not be so fine as those of Miss Lavina, and you will never make cake as his mother does. Here at the old home you have been perfection; even if prudence kept your parents from saying so, they cannot believe anyone quite so nice as "our Lily." Then linger a little here—where some one else shoulders the burdens and shields you from life's worry, where the love is a love that does not change because of a new face, where the innocent days of childhood have been passed—your first and best home.—*Christian at Work.*

The experiment o propelling street cars by electricity was tried in London a few weeks ago. Under the seats of the car Faure accumulators were placed, and they were connected with electro-motors, which rotated the wheels of the car by means of pinions. The weight of the accumulators—3,000 pounds—was a decided objection, but five-horse power was obtainable for five hours. It is asserted that cars can be moved in this way at half the cost of horses.

For our Boys and Girls.

Our Puzzle Box.

Numerical Enigma.

I am composed of twelve letters:
My 12, 2, 10 is a personal pronoun;
My 1, 3, 11, 11 is filled to the limit of capacity;
My 6, 7, 5 is a trifle;
My 6, 3. 4, 5 is to injure;
My 8 is in perpetuity;
My whole is the gala day of a great nation—a day of national rejoicing.

MELANCTHON.

Syncopations.

1. Syncopate a portion of a wagon and obtain a bever-edge.
2. Syncopate to apprise of danger and obtain pallid.
3. Syncopate principal and obtain the human race.
4. Syncopate to supplicate and obtain a recompense.
5. Syncopate to reduce by friction and obtain a contest.
6. Syncopate to weave and obtain a small nail.

A. B. C.

Word Square.

1. The smallest portion.
2. Plain and frank.
3. A proof.
4. A species of small insects.

JENNIE.

Decapitations.

1. Behead tidy and leave to consume.
2. Behead combustion and leave anger.
3. Behead to be aware and leave the present time.

HELEN J. C.

Towns.

1. A preposition and fowls.
2. A conjunction, an interjection and a negation.
3. An article and a relative.
4. Recent and a kind of wine.
5. Angry, a pronoun and a relative.
6. A performance and upon.

PROBLEM.—Three sheep are placed in each of three pens, all being enclosed in a large pen.

Jennie and Floy.

"Don't you want to read to me a little while, Jennie, my poor old head is so tired?"

"Oh dear! grandma, you're always wanting me to read or do something for you when I'm busy," and Jennie Colman impatiently threw down the tidy she was embroidering, and with a heavy frown took up the paper her poor old grandmother had laid down.

"Never mind, dear; I can wait till Floy gets home," said grandma, sadly. "I didn't notice you were doing anything in particular."

"Well, I was," Jennie snapped out. "There's that tidy must be done Thursday for the fair, and it isn't hardly begun yet. Well, there's no use talking. What do you want me to read?"

"I don't want you to read at all, Jennie," said grandma, in a trembling voice. "I wouldn't have asked you if I had known you had anything to do. Go right on with your work."

"Oh, well, if you don't want me to, very well. I'm not at all anxious," and Jennie returned to her work.

Grandma sat awhile with closed eyes, thinking of the happy past, when there were always willing hands and happy hearts at her service, when suddenly a click of the gate-latch roused her from her musings, and a glad smile lighted up her tired old face.

"There's Floy!" she exclaimed brightly.

"Oh, yes, there's Floy, of course. You think Foy is almost an angel, I do believe, grandma Colman."

"Well, who don't love Floy?" grandma responded. "No one can help it."

And, inded, few could help loving the bright-faced young girl of 14 who came bounding into the room, seeming to bring with her a touch of the outside glow and brightness.

"Well, grandma, how do you feel? Is your head any better? Is there anything I can do for you?" And the rosy lips met grandma's, lovingly.

"No, dear, my head is no better, but you must sit down and get rested, and not be thinking what you can do for me the first thing."

"O, yes," said Jennie, impatiently, "of course Floy must not hurt herself. It don't make any difference about me."

"Jennie Colman!" burst forth Floy, indignantly; "I'd be ashamed to talk so to dear old grandmother. You know she thinks just as much of your comfort as she does of mine. But you think so much of yourself no one need worry about your getting along without any trouble."

"You look out for yourself, and I'll do the same," was Jennie's response.

Floy had hardly seated herself when she espied the paper grandma had been reading.

"Oh, sha'n't I read to you grandma, dear?" she asked. "I feel just like it."

"If you are not too tired," said the old lady, wistfully, I should like you to read a little while. I was in the middle of that article," pointing to the one she had been reading.

"All right," said Floy, cheerfully, though the article in question was dull reading for a girl of her age. She read patiently on, while Jennie sat sulkily bending over her emdroidery.

And which, think you, enjoyed the afternoon more—Floy, who gave up her own wishes to minister to her grandmother's, or Jennie, in her utter disregard of all but her own selfish desires? Which are you like, reader, and which do you wish to be like?

Household Hints

ORANGE MARMALADE.—Take 12 oranges of fair size, with smooth, highly-colored skins, score the peel off in quarters, taking with it as much of the white skin as you can without breaking the pulp. As you remove the peel put it in a basin of water. Put it all, when ready, into a stewpan, with water enough to cover the peal; change the water several times during the boiling process, and when the peel is quite soft and very tender, take it out of the pan and drain it in a hair seive. Spread out the peel, when nearly dry, on a pasteboard and cut it into fine shreds. Squeeze the oranges and add the juice of three or four lemons to every dozen oranges. The peel and juice must be weighed, and to every pound add a pound and a half of loaf sugar. Allow to this amount of sugar a pint and a half of water, obtained by washing and straining the pulp of oranges. Boil and skim carefully for 15 or 20 minutes, then add the washed pulp and juice, and boil until it commences to thicken, then put in the pulp and boil for 20 or 30 minutes, or until it jellies properly.

EARTHENWARE IN COOKING.—The flavor of food baked or boiled in earthenware is said, by those who have made the experiment, to be far superior to that of vegetable or animal food cooked in the same way in iron vessels, for the reason that iron is a conductor of heat, while earthenware is a non-conductor; consequently, food cooked in the latter is rarely ever burned, the degree of heat not varying perceptibly during the process of cooking, thus preserving the flavor of what is cooked, as well as uniformity throughout the substance of the meat, vegetables or grains, until the process of cooking is completed. So earthenware takes the premium, as it deserves to, and those who have found out how much better they can do their cooking in these vessels than in ironware, give pots and kettles a cold shoulder often.

FOR CORNING BEEF.—Cut the beef in small pieces, leaving out the large bones, pack solid in a six-gallon crock with a weight on top. Pour over the beef boiling hot brine, made as follows: Two gallons of water, three pounds of salt, one ounce of saltpeter, a pound of sugar and two large spoonfuls of baking soda. After two weeks, heat and skim the brine, and repeat the process whenever you think necessary, but never put the brine on hot after the first time. If the weather is hot you can add a handful of salt and soda at any time, and, like all pickling, be sure the brine covers the beef. If packed in a barrel, a large cloth should be securely tied over it in summer, to secure its contents from flies. The nicest vessel to put it into is a half-barrel earthen jar.

SWEET POTATO ROLLS.—Boil, and mash through a colander, two large sweet potatoes, adding to them a tablespoonful of butter or lard. Sift two quarts of flour into a bowl, make a hole in the center of it, and with two beaten eggs, a cup of fresh yeast and some boiled milk, make a sort of sponge, stirring the potatoes into it. After this has stood for an hour, mix it into a stiff dough and knead it well. When the dough is quite light, roll out and cut it into small round cakes, and let them stand a while before baking. The milk must be cooled after it is boiled, before mixing the sponge. Add some salt to the flour.

JUBILEE PONE.—Take one pint of corn-meal, and add to it a small teaspoonful of salt, two eggs well beaten, and half a teaspoonful of baking powder. Mix it into a batter with sweet milk, stirring very hard. Have a round tin pan, or an earthen turk's head, on the top of a stove, and when it is very hot throw in a heaping tablespoonful of lard or butter, and when it boils pour the mixture into it. Stir around lightly, and bake in a quick oven. As soon as the loaf is browned and the fat nearly absorbed, it is done, and must be served immediately,

NEW KETTLES.—The best way to prepare a new iron kettle for use is to fill it with clean potato peelings, boil them for an hour or more, then wash the kettle with hot water, wipe it dry, and rub it with a little lard; repeat the rubbing for half a dozen times after using. In this way you will prevent rust and all the annoyances liable to occur in the use of a new kettle.

CORN FRITTERS.—Grate one dozen ears of corn upon a coarse grater, and with a spoon scrape the cob in order to obtain the milk that adheres to it. Add salt, a tablespoonful of flour, two tablespoonfuls of milk, and two beaten eggs. Drop the mixture from a spoon into boiling fat, and fry them a nice brown. Drain them, and serve very hot.

STRAWBERRY JAM.—Cap large, ripe, firm strawberries, and to every pound of fruit allow three-quarters of a pound of pulverized sugar. Strew the sugar over the berries, and when it is dissolved put all in a porcelain-lined kettle, and cook slowly until the berries are clear and the whole begins to thicken. Seal up when cool in small glass jars.

Health Column.

The Advantages of Two Eyes.

In response to the question, "What is the use of having two eyes?" the answer has been given, "To have one left if the other is hurt. Much as we may admire the sagacious foresight of this youthful physiologist, it will not be found sufficient to rest contented with his ultimatum. He had evidently not tried his skill to find how unexpectedly he would miss the inkstand while endeavoring to dip his pen into it at arm's length with one eye closed. He had not thought of holding his finger a few inches in front of his face to find what part of the wall it would hide from each eye in succession, or how differently it would look when regarded from those two points of view separately, how much thicker it would appear when both eyes were open, how readily he could examine three sides of it at once, how much more definitely he could judge its distance, in a word how much more comprehensive was the information given by two eyes if used at the same moment. Assuming that he knows exactly how to account for the inversion of the retinal image and the erect appearance of the object there pictured, how our visual perceptions are only signs of what we momentarily feel on the retina, signs that generally represent the realities with a fair degree of accuracy, but may sometimes represent almost anything else on demand, how, if the eyes be healthy, we have no consciousness of possessing any retina at all, but instantly and unconsciously refer every retinal sensation to some external body whose existence we are obliged to assume, unless there be special arguments to convince us to the contrary—granting all this, our young physiologist has not thought of inquiring how it is that, although two retinal images are produced, we see but a single object, and this despite the fact that, like photographs of the same body simultaneously taken from different standpoints, these two images are necessarily dissimilar.—*Popular Science Monthly.*

RECKLESS USE OF HYPODERMIC INJECTIONS.—A recent painful case of death caused by a hypodermic injection of morphia directs attention afresh to the dangers of resorting to this most perilous mode of administering drugs designed to relieve pain. The public should be warned against the practice of employing remedies hypodermically. So formidable a "remedy" should on no account be used except under medical advice, and when deemed necessary it ought to be given by practitioners. We have repeatedly urged the profession to discountenance the recourse to injections under the skin, which is becoming general. It is a practice of extreme hazard, and we are of opinion that surgical instrument makers should refuse to sell the requisite apparatus to lay persons, and that medical men should forbid their use.—*London Lancet.*

CORNS CURED.—The safest, the most accessible and the most efficient cure of a corn on the toe, is to double a piece of thick soft buckskin, cut a hole in it large enough to receive the corn, and bind it around the toe. If, in addition to this, the foot is soaked in warm water for five or more minutes every morning and night, and a few drops of sweet or other oily substance are patiently rubbed in on the end after the soaking, the corn will almost infallibly become loose enough in a few days to be easily picked out with the finger nail; this saves the necessity of paring the corn, which operation has sometimes been followed with painful and dangerous symptoms. If the corn becomes inconvenient again, repeat the process at once.—*Good Health.*

POISONOUS BULLETS.—A German journal refers to a discovery made by M. Gros, of Paris, which tends to throw some light on the complaints which were made, but not seriously inquired into, during the Franco-German war, as to the use of poisoned bullets by the combatants on both sides. M. Gros explains that the construction of the modern breech-loading arms causes the bullet to convey with it a portion of the hydrocyanic acid, which the explosion of powder has caused to be accumulated in the barrel. Even if poisoning to a mortal extent does not take place, it is remarked that the healing of wounds is materially retarded by the circumstance.

SOFT BEDS.—Why should soft beds be considered unwholesome? Certainly they afford more comfort than hard ones. Hard beds should never be given to little children, and parents who suppose that such beds contribute to health by hardening and developing the constitutions are surely in error. Eminent physicians, both here and in England, concur in this opinion, and state that hard beds have often proved injurious to the shape of infants. Birds and animals cover their offspring with the softest material they can obtain, and also make soft beds for them. Why not do the same with our own young?

FORCING THE INTELLECT OF CHILDREN.—The *Medical and Surgical Reporter*, in a recent able editorial on this subject, contends that much injury is done by sending children to school too early, and holds, very properly, we think, that the portion of life prior to puberty should be devoted mainly to physical developments.

HOT WATER FOR INFANTS.—Recent cases are noted in the medical journals of tetanus, or lock-jaw, having occurred in infants on account of being bathed in too hot water. A single nurse reports several cases of the kind.

Worth Knowing.

GILDING LEATHER.—Dampen the skin with a sponge and water, and strain it tight with tacks on a board sufficiently large. When dry, size it with clear double size; then beat the whites of eggs with a wisp to a foam, and let them stand to settle; then take the books of leaf silver, and blow out the leaves of silver on a gilder's cushion; pass over the leather carefully with the egg size, and with a tip brush lay on the silver, closing any blister that may be left with a bunch of cotton. When dry, varnish over the silvered surface with yellow lacquer until it has assumed a fine gold color. The skin being thus gilded, may be cut into suitable strips or patterns. It should be carefully observed to have the skin well dried before sizing it. Bookbinders gild the edges, etc., of leather, in a different way. They first go over the part intended to be gilded with a sponge dipped in the glair of eggs (the whites beaten up to a froth and left to settle); then, being provided with a brass roller, on the edge of which the pattern is engraved, and fixed as a wheel in a handle, they place it before the fire till heated, so that, by applying a wetted finger, it will just hiss. While the roller is heating, they rub the part where the pattern is intended to come with an oiled rag or clean tallow, and lay strips of gold-leaf on it, pressing it down with cotton; then, with a steady hand, they run the roller along the edge of the leather, and wipe the superfluous gold off with an oiled rag, and the gold adheres in those parts where the impression of the roller has been made, while the rest will rub off with the oiled rag.—*Manufacturer and Builder.*

CURES FOR BALDNESS.—The *Chemists' Journal* says: Dr. Xavier Landerer, of Athens, has again been so obliging as to send us some notes from the cradle of pharmacy. Numberless remedies for baldness of French, English, German and American origin stock our markets, but none, according to Dr. Landerer, equal in efficiency the following, which he has used and prescribed for many years past: Prepare a tincture of the cups of the *Quercus ægilops*, which are known in commerce as valonia, and digest with it powdered cloves and cinnamon. Make a tincture by digesting the leaves of the *Laurus apollonis* in acid wine, and mix the two together. Before applying this remedy the skin of the head should be well washed with a decoction of saponaria root (*Saponaria levantica*), to cure any *exanthema pithyriatias* which may be present. Instead of pomatum or hair oil, laurel oil should be used, this being the usual hair oil in vogue among the ladies of the East. Dr. Landerer calls this remedy for baldness *alexitrichon*, or hair preserver.

CEMENT FOR LEATHER.—Many recipes have been given for a cement for joining leather; but the following is that which seems to have given the best satisfaction, especially for the construction of leather belting: Equal parts of comman glue and American isinglass are placed in a glue pot, water being added sufficient in quantity to cover the whole. After some 10 hours' soaking, the mixture is brought to a boiling heat, and pure tannin added, until the whole becomes of a ropy consistence, or like that of the white of eggs, and apply warm. The plan is to buff off the grain of the leather where it is to be cemented, rub the joint surfaces solidly together, let it dry for a few hours, and it is ready for use. If suitably put together no rivets are required, the cement being as strong as the leather.

IMITATION WOOD CARVINGS.—Ever since Blanchard invented the eccentric lathe, American mechanical ingenuity has been taxed to produce a wood carving machine that should be a sufficient substitute for hand labor, and although several carving lathes have been invented, for various reasons none of them have been an unqualified success, nor have proved of commercial value. More headway in substituting machine work for hand work has been made in other directions, and pressed wood ornaments, produced by dies and now largely used, supply an acceptable substitute for carvings on furniture of the cheaper grades.

INSURANCE AGAINST MACHINERY ACCIDENTS.—There is a company in Manchester, England, that insures engines against accidental breakdowns. The object of the company is to reduce breakdowns to a minimum; and their periodical nvestigations by indicator diagrams often lead o the discovery of unsuspected defects. A report recently made shows that of the breakdowns of the insured engines, 49% were due to accidental causes, 14% to the negligence of attendants, 20% to old flaws and defects, and 14% to weakness or faulty construction.

SOLDERING cast-iron, says the *Engineer*, is generally considered to be very difficult, but it seems to be only a question of thoroughly making bright the surface to be soldered, and using a good solder and a clean swab with muriatic acid. Sodium amalgam might be usefully employed for the purpose.

WELL-SEASONED POSTS, when thoroughly dried and then charred and dipped in hot tar, will remain rot and insect proof for many years in almost any kind of soil.

TO TIN SMALL CASTINGS, clean and boil them with scraps of block tin in a strong solution of cream of tartar.

Arizona

TOMBSTONE, No. 3, Arizona.—W. W. Baldwin, M. W.; J. Lenoir, F.; E. Drew, O.; W. D. Monmimen, Rdr.; F. W. Hatch, Fin.; J. C. Fitzhenry, Rvr.; W. J. Fell, G.; S. McClanan, I. W.; C. Recum, O. W.; D. Neagle, Trus.; N. A. Gilberson, Med. Ex. Reported by W. W. Baldwin.

J. D. THOMPSON, D. D. G. M. W. of District 4, assisted by A. V. Thompson, P. M. W. of Noe Valley, 185, acting as Grand Guide in installing the officers of the Lodges in his District, found a W. T. Thomson as Foreman in Myrtle, 42, a W. J. Thomson as Foreman in Yerba Buena, 14, and a N. C. Thompson as P. M. W. in Noe Valley, 185. In the Lodge the D. D. G. M. W. hails from, there are three Thompsons P. M. W., all spelled with a "p," and another Thompson with a "p," a high private. Two of the P. M. W. of Noe Valley are father and son, the father succeeding the son as P. M. W. It is regretted that the only remaining Lodge (Bernal, No. 9) in the Deputy's District had not a Thompson on which our worthy Deputy could bestow the toga of his office.

D. S. HIRSHBERG, P. M. W., as a business agent and collector, is reliable and trustworthy. Anything entrusted to his care, in his line, cannot be put in better hands. His office is 850 Broadway, room 14, Oakland.

A Story of the Revolution.

The Only Woman in the Town.

In Boston, at ten of the clock one April night, 1775, a church steeple had been climbed and a lantern hung out.

At ten, the same night, in mid-river of the Charles, oarsmen two, with passenger silent and grim, had seen the signal light out-swung, and rowed with speed for the Charlestown shore.

At eleven, the moon was risen, and the grim passenger, Paul Revere, had ridden up the Neck, encountered a foe, who opposed his ride into the country, and, after a brief delay, rode on, leaving a British officer lying in a clay pit.

At midnight a hundred ears had heard the flying horseman cry, "Up and arm. The regulars are coming out!"

You know the story well. You have heard how the wild alarm ran from voice to voice and echoed beneath every roof, until the men of Lexington and Concord were stirred and aroused with patriotic fear for the safety of the public stores that had been committed to their keeping.

You know how long ere the chill April day began to dawn, they had drawn, by horse power and by hand power, the cherished stores into safe hiding places in the depth of friendly forest coverts.

There is one thing about that day that you have not heard, and I will tell you now. It is how one little woman staid in the town of Concord, whence all the women save her had fled.

All the houses that were standing then are very old-fashioned now; but there was one dwelling-place on Concord common that was old-fashioned even then! It was the abode of Martha Moulton and "Uncle John." Just who "Uncle John" was, is not now known, but he was probably Martha Moulton's uncle. The uncle, it appears by record, was 85 years old, while the niece was only three-score and eleven.

Once and again that morning a friendly hand had pulled the latch string at Martha Moulton's kitchen entrance and offered to convey herself and treasures away, but, to either proffer, she had said: "No, I must stay until Uncle John gets the cricks out of his back, if all the British soldiers in the land march into town."

At last came Joe Devins, a lad of 15 years. Joe's two astonished eyes peered for a moment into Martha Moulton's kitchen, and then eyes and owner dashed into the room, to learn what the sight he there saw could mean.

"Whew! Mother Moulton, what are you doing?"

"I'm getting Uncle John his breakfast, to be sure, Joe," she answered. "Have you seen so many sights this morning that you don't know breakfast when you see it? Have a care there, for hot fat will burn," as she deftly poured the contents of a pan, fresh from the fire, into a dish.

Hungry Joe had been astir since the first drum had beat to arms at two of the clock. He gave one glance at the boiling cream and the slices of crisp pork swimming in it, as he gasped forth the words, 'Getting breakfast in Concord this morning! Mother Moulton, you must be crazy."

As the little woman bent to take up the breakfast, Joe, intent on doing some kindness for her in the way of saving treasures, asked, "Shan't I help you, Mother Moulton?"

"I reckon I am not so old that I can't lift a mite of corn bread," she replied, with chilling severity.

"Oh, I didn't mean to lift that thing," he made haste to explain, "but to carry off things and hide 'em away, as everybody else has been doing half the night. I know a first-rate place up in the woods. Used to be a honey tree, you know, and it's just as hollow as anything. Silver spoons and things would be just as safe in it—" but Joe's words were interrupted by unusual tumult on the street, and he ran off to learn the news, intending to return and get the breakfast that had been offered to him.

Presently he rushed back to the house, with cheeks aflame and eyes ablaze with excitement. "They're a coming!" he cried. "They're in sight down by the rocks. They see 'em marching, the men on the hill, do!"

"You don't mean that it's really true that the soldiers are coming here, right into our town?" cried Martha Moulton, rising in haste and bringing together with rapid flourishes to right and to left, every fragment of silver on it. Divining her intent, Uncle John, who was eating his breakfast, strove to hold fast his individual spoon, but she twitched it without ceremony out from his rheumatic old fingers, and ran next to the parlor cupboard, wherein lay her movable treasures.

"What in the world shall I do with them," she cried, returning with her apron well filled with treasures, and borne down by the weight thereof.

"Give 'em to me," cried Joe. "Here's a basket, drop 'em in, and I'll run like a brush fire through the town and across the old bridge, and hide 'em as safe as a weasel's nap."

Joe's finger's were creamy; his mouth was half filled with Johnny-cake, and his pocket on the right bulged to its utmost capacity with the same, as he held forth the basket; but the little woman was afraid to trust him, as she had been afraid to trust her neighbors.

"No! No!" she replied, to his repeated offers. "I know what I'll do. You, Joe Devins, stay right where you are till I come back, and, don't you ever look out of the window."

"Dear, dear me!" she cried, flushed and anxious when she was out of sight of Uncle John and Joe. I wish I'd given 'em to Col. Barrett when he was here before daylight, only, I was afraid I should never get sight of them again."

She drew off one of her stockings, filled it, tied the opening at the top with a string—plunged stocking and all into a pail full of water and proceeded to pour the contents into the well.

Just as the dark circle had closed over the blue stocking, Joe Devins' face peered down the depths by her side, and his voice sounded out the words: "O, Mother Moulton, the British will search the wells the very first thing. Of course, they expect to find things in wells!"

"Why didn't you tell me before, Joe? but now it is too late."

"I would, if I'd known what you was going to do; they'd been a sight safer in the honey tree."

"Yes, and what a fool I've been—flung my watch into the well with the spoons!"

"Well, well! Don't stand there looking," as she hovered over the high curb, with her hand on the bucket. Everybody will know, if you do, there."

Martha Moulton hurried back into the house. A smile broke suddenly over her fair face, displacing for a brief second every trace of care. "It's my only weapon, and I must use it," she said, making a stately courtesy to an imaginary guest, and straightway disappeared within an adjoining room. With buttoned door and dropped curtains the little woman made haste to array herself in her finest raiment. In five minutes she reappeared in the kitchen, a picture pleasant to look at. In all New England there could not be a more beautiful little old lady than Martha Moulton was that day. Her hair was guiltless now of cobwebs, but haloed her face with fluffy little curls of silvery whiteness, above which, like a crown, was a little cap of dotted muslin, pure as snow. Her erect figure, not a particle of the hard-working day in it now, carried well the folds of a sheeny, black silk gown, over which she had tied an apron as spotless as the cap.

As she fastened back her gown and hurried away the signs of the breakfast she had not eaten, the clear pink tints seemed to come out with added beauty of coloring in her cheeks; while her hair seemed fairer and whiter than at any moment in her three-score and 11 years.

Once more Joe Devins looked in. As he caught a glimpse of the picture she made, he paused to cry out: "All dressed up to meet the robbers! My, how fine you do look! I wouldn't. I'd go and hide behind the nubbins. They'll be here in less than five minutes now," he cried, "and I'm going over the North bridge to see what's going on there."

"O Joe, stay, won't you?" she urged, but the lad was gone, and she was left alone to meet the foe, comforting herself with the thought, "They'll treat me with more respect if I look respectable, and if I must die, I'll die good-looking, in my best clothes, anyhow."

She threw a few sticks of hickory wood on the embers, and then drew out the little round stand, on which the family Bible was always lying. Recollecting that the British soldiers probably belonged to the Church of England, she hurried away to fetch Uncle John's "prayer book."

"They'll have respect to me, if they find me reading that, I know," she thought. Having drawn the round stand within sight of the well, and where she could also command a view of the staircase, she sat and waited for coming events.

Uncle John was keeping watch of the advancing troops from an upper window.

"Martha," he called, "you'd better come up. They're close by now."

To tell the truth, Uncle John himself was a little afraid. That is to say, he hadn't quite courage enough to go down, and, perhaps, encounter his own rheumatism and the king's soldiers on the same stairway; and yet he felt that he must defend Martha as well as he could.

The rap of a musket, quick and ringing, on the front door, startled the little woman from her apparent devotions. She did not move at the call of anything so profane. It was the custom of the time to have the front door divided into two parts, the lower half and the upper half. The former was closed and made fast, the upper could be swung open at will.

The soldier, getting no reply, and doubtless thinking that the house was deserted, leaped over the chained lower half of the door.

At the clang of his bayonet against the brass trimmings, Martha Moulton groaned in spirit, for if there was any one thing that she deemed essential to her comfort in this life, it was to keep spotless, speckless, and in every way unharmed, the great knocker on her front door.

"Good, sound English metal, too," she thought, "that an English soldier ought to know how to respect."

As she heard the tramp of coming feet, she only bent the closer over the Book of Prayer that lay open on her knee. Not one word did she read or see; she was inwardly trembling, and outwardly watching the well and the staircase. But now, above all other sounds, broke the noise of Uncle John's staff thrashing the upper step of the staircase, and the shrill, tremulous cry of the old man defiant, doing his utmost for the defense of his castle.

The fingers that lay beneath the book tingled with desire to box the old man's ears, for the policy he was pursuing would be fatal to the treasure in garret and in well; but she was forced to silence and inactivity.

As the king's troops, Major Pitcairn at their head, reached the open door and saw the old lady, they paused. What could they do but look, for a moment, at the unexpected sight that met their view: a placid old lady in black silk and dotted muslin, with all the sweet solemnity of morning devotion hovering about the tidy apartment and seeming to center at the stand by which she sat—this pretty woman, with pink and white face surmounted with fleecy little curls and crinkles and wisps of floating whiteness, who looked up to meet their gaze with such innocent prayer-suffused eyes.

"Good morning, mother," said Major Pitcairn, raising his hat.

"Good morning, gentlemen and soldiers," returned Martha Moulton. "You will pardon my not meeting you at the door, when you see that I was occupied in rendering service to the Lord of all."

She reverently closed the book laid it on the table, and arose, with a stately bearing, to demand their wishes.

"We're hungry, good woman," spoke the commander, "and your hearth is the only hospitable one we've seen since we left Boston. With your good leave, I'll take a bit of this." And he stooped to lift up the johnny-cake that had been all this while on the hearth.

"I wish I had something better to offer you," she said, making haste to fetch plates and knives from the corner-cupboard; and all the while she was keeping eye-guard over the well. "I'm afraid the Concorders haven't left much for you to-day," she added, with a soft sigh of regret, as though she really felt sorry that such brave men and good soldiers had fallen on hard times in the ancient town.

At the moment she brought forth bread and baked beans, and was putting them on the table, a voice rang into the room, causing every eye to turn toward Uncle John. He had gotten down the stairs without uttering one audible groan, and was standing, one step above the floor of the room, brandishing and whirling his staff about in a manner to cause even rheumatism to flee the place, while at the top of his voice he cried out:

"Martha Moulton, how dare you feed these—these—monsters—in human form!"

"Don't mind him, gentlemen, please don't," she made haste to say; "he's old, very old—85 his last birthday—and—a little hoity-toity at times," pointing deftly with her finger in the region of the reasoning powers in her own shapely head.

Summoning Major Pitcairn by an offer of a dish of beans, she contrived to say under cover of it:

"You see, sir, I couldn't go away and leave him. He is almost distracted with rheumatism, and this excitement to-day will kill him I'm afraid."

Advancing toward the staircase with bold and soldierly front, Major Pitcairn said to Uncle John:

"Stand aside, old man, and we'll hold you harmless."

"I don't believe you will, you red-trimmed trooper, you," was the reply; and with a dexterous swing of the wooden staff, he mowed off and down three military hats.

Before any one had time to speak, Martha Moulton, adroitly stooping, as though to recover Major Pitcairn's hat, which had rolled to her feet, swung the stairway door into its place

THE HEROINE OF CONCORD.

with a resounding bang, and followed up that achievement with a swift turn of two large wooden buttons, one high up, and the other low down, on the door.

"There!" she said, "he is safe out of mischief for a while, and your heads are safe as well. Pardon a poor old man, who does not know what he is about."

"He seems to know remarkably well," exclaimed an officer.

Meanwhile, behind the strong door, Uncle John's wrath knew no bounds. In his frantic endeavors to burst the fastenings of the wooden buttons, rheumatic cramps seized him and carried the day, leaving him out of the battle.

Meanwhile, a portion of the soldiery clustered about the door. The King's horses were fed within five feet of the great brass knocker, while, within the house, the beautiful little old woman, in her Sunday-best raiment, tried to do the dismal honors of the day to the foes of her country. Watching her, one would have thought she was entertaining heroes returned from the achievement of valiant deeds, whereas in her own heart she knew full well that she was giving a little to save much.

Nothing could exceed the seeming alacrity with which she fetched water from the well for the officers; and when Major Pitcairn gallantly offered his men to do the service, the little soul was in alarm, she was so afraid that "somehow, in some way or another, the blue stocking would get hitched on to the bucket." She knew that she must to its rescue, and so she bravely acknowledged herself to have taken a vow (when, she did not say) to draw all the water that was taken from that well.

"A remnant of witchcraft," remarked a soldier within hearing.

"Do I look like a witch?" she demanded.

"If you do," replied Major Pitcairn, "I admire New England witches, and never would condemn one to be hung, or burned, or—smothered."

Martha Moulton never wore so brilliant a color on her aged cheeks as at that moment. She felt bitter shame at the ruse she had attempted; but silver spoons were precious, and, to escape the smile that went around at Major Pitcairn's words, she was only too glad to go again to the well, and dip slowly the high, overhanging sweep into the cool, clear, dark depths below.

During this time the cold, frosty morning spent itself into the brilliant, shining noon.

You know what happened at Concord on the 19th of April, in the year 1775. You have been told the story, how the men of Acton met and resisted the King's troops at the old North bridge; how brave Captain Davis and minuteman Hosmer fell; how the sound of their falling struck down to the very heart of mother earth, and caused her to send forth her brave sons to cry "Liberty or death!"

And the rest of the story—the 60 or more barrels of flour that the King's troops found and struck the heads from, leaving the flour in condition to be gathered again at nightfall; the arms and powder that they destroyed, the houses they burned—all these, are they not recorded in every child's history in the land?

While these things were going on, for a brief while, at midday, Martha Moulton found her home deserted. She had not forgotten poor, suffering, irate Uncle John in the regions above; and so, the very minute she had the chance, she made a strong cup of catnip tea (the real tea, you know, was brewing in Boston harbor).

She turned the buttons, and with a bit of trembling at her heart, such as she had not felt all day, she ventured up the stairs, bearing the steaming peace-offering before her.

Uncle John was writhing under the sharp thorns and twinges of his old enemy, and in no frame of mind to receive any overtures in the way of catnip tea; nevertheless, he was watching, as well as he was able, the motions of the enemy. As she drew near he cried out:

"Look out this window, and see. Much good all your scheming will do you."

She obeyed his command to look, and the sight she then saw caused her to let fall the cup of catnip tea and rush down the stairs, wringing her hands as she went, and crying out:

"Oh, dear! what shall I do? The house will burn and the box up garret. Everything's lost!"

Major Pitcairn, at that moment, was on the green in front of her door, giving orders.

Forgetting the dignified part she intended to play, forgetting everything but the supreme danger that was hovering in mid-air over her home—the old house wherein she had been born, and the only home she had ever known—she rushed out upon the green, amid the troops and surrounded by cavalry, and made her way to Major Pitcairn.

"The court house is on fire!" she cried, laying her hand upon the commander's arm.

He turned and looked at her. Major Pitcairn had recently learned that the task he had been set to do in the provincial towns that day was not an easy one; that, when hard pressed and trodden down, the despised rustics, in homespun dress, could sting even English soldiers; and thus it happened that, when he felt the touch of Mother Moulton's plump little old fingers on his military sleeve, he was not in the pleasant humor that he had been, when the same hand had ministered to his hunger in the early morning.

"Well, what of it? Let it burn! We won't hurt you, if you go in the house and stay there!"

She turned and glanced up at the court house. Already flames were issuing from it. "Go in the house and let it burn, indeed!" thought she. "He knows me, don't he? Oh, sir! for the love of heaven won't you stop it?" she said, entreatingly.

"Run in the house, good mother. That is a wise woman," he advised.

Down in her heart, and as the very outcome of lip and brain, she wanted to say, "You needn't 'mother' me, you murderous rascals!" but, remembering everything that was at stake, she crushed her wrath and buttoned it in as closely as she had Uncle John behind the door in the morning, and again, with swift gentleness, laid her hand on his arm.

He turned and looked at her. Vexed at her persistence, and extremely annoyed at intelligence that had just reached him from the North bridge, he said, imperiously, "Get away! or you'll be trodden down by the horses!"

"I can't go!" she cried, clasping his arm, and fairly clinging to it in her frenzy of excitement. "Oh, stop the fire, quick, quick! or my house will burn!"

"I have no time to put out your fires," he said, carelessly, shaking loose from her hold and turning to meet a messenger with news.

Poor little woman! What could she do? The wind was rising, and the fire grew. Flame was creeping out in a little blue curl in a new place, under the rafter's edge, and nobody cared. That was what increased the pressing misery of it all. It was so unlike a common country alarm, where everybody rushed up and down the streets, crying, "Fire! fire! f-i-r-e!" and went hurrying to and fro for pails of water to help put it out.

Until that moment the little woman did not know how utterly deserted she was.

In very despair, she ran to her house, seized two pails, filled them with greater haste than she had ever drawn water before, and, regardless of Uncle John's imprecations, carried them forth, one in either hand, the water dripping carelessly down the side breadths of her fair silk gown, her silvery curls tossed and tumbled in white confusion, her pleasant face aflame with eagerness, and her clear eyes suffused with tears.

Thus equipped with facts and feeling, she once more appeared to Major Pitcairn.

"Have you a mother in old England?" she cried. "If so, for her sake, stop this fire."

Her words touched his heart.

"And if I do—?" he answered.

"Then your johnny-cake on my hearth won't burn up," she said, with a quick little smile, adjusting her cap.

Major Pitcairn laughed, and two soldiers, at his command, seized the pails and made haste to the court house, followed by many more.

For awhile the fire seemed victorious, but, by brave effort, it was finally overcome, and the court house saved.

At a distance Joe Devins had noticed the smoke hovering like a little cloud, then sailing away still more like a cloud over the town; and he had made haste to the scene, arriving in time to venture on the roof, and do good service there.

After the fire was extinguished, he thought of Martha Moulton, and he could not help feeling a bit guilty at the consciousness that he had gone off and left her alone.

Going to the house he found her entertaining the king's troopers with the best food her humble store afforded.

She was so charmed with herself, and so utterly well pleased with the success of her pleading, that the little woman's nerves fairly quivered with jubilation; and, best of all, the blue stocking was still safe in the well, for had she not watched with her own eyes every time the bucket was dipped to fetch up water for the fire, having, somehow, got rid of the vow she had taken regarding the drawing of the water.

But now the feast was spent, and the soldiers were summoned to begin their painful march. Assembled on the green, all was ready, when Major Pitcairn, remembering the little woman who had ministered to his wants, returned to the house to say farewell.

'Twas but a step to her door, and but a moment since he had left it, but he found her crying; crying with joy, in the very chair where he had found her at prayers in the morning.

"I would like to say good-by," he said, "you've been very kind to me to-day."

With a quick dash or two of the dotted white apron (spotless no longer) to her eye, she arose. Major Pitcairn extended his hand, but she folded her own closely together, and said:

"I wish you a pleasant journey back to Boston, sir."

"Will you not shake hands with me before I go?"

"I can feed the enemy of my country, but shake hands with him, never!"

For the first time that day, the little woman's love of country seemed to rise triumphant within her, and drown every impulse to selfishness; or was it the nearness to safety that she felt? Human conduct is the result of so many motives that it is sometimes impossible to name the compound, although on that occasion Martha Moulton labelled it "Patriotism."

"And yet I put out the fire for you," he said.

"For your mother's sake, in old England, it was, you remember, sir."

"I remember," said Major Pitcairn, with a sigh, as he turned away.

"And for her sake I will shake hands with you," said Martha Moulton.

So he turned back, and across the threshold, in presence of the waiting troops, the commander of the expedition to Concord and the only woman in the town shook hands at parting.

Martha Moulton saw Major Pitcairn mount his horse; heard the order given for the march to begin, the march of which you all have heard. You know what a sorry time the red-coats had of it in getting back to Boston; how they were fought at, every inch of the way, and waylaid from behind every convenient tree-trunk, and shot at from tree-tops, and aimed at from upper windows, and besieged from behind stone walls, and, in short, made so miserable and harassed and overworn, that at last their depleted ranks, with the tongues of the men parched and hanging, were fain to lie down by the roadside and take what came next, even though it might be death. And then the dead they left behind them!

Ah! there's nothing wholesome to mind or body about war, until long, long after it is over, and the earth has had time to hide the blood, and send it forth in sweet blooms of liberty, with forget-me-nots springing thick between.

The men of that day are long dead. The same soil holds regulars and minute-men. England, who overruled, and the provinces, that put out brave hands to seize their rights, are good friends to-day, and have shaken hands over many a threshold of hearty thought and kind deeds since that time.

The tree of Liberty grows yet, stately and fair, for the men of the Revolution planted it well and surely. God himself hath given it increase. So we gather to-day, in this our story a forget-me-not more, from the old town of Concord.

When the troops had marched away, the weary little woman laid aside her silken gown, resumed her homespun dress, and immediately began to think of getting Uncle John down stairs again into his easy chair; but it required more aid than she could give to lift the fallen man. At last Joe Devins summoned returning neighbors, who came to the rescue, and the poor nubbins were left to the rats once more.

Joe climbed down the well and rescued the blue stocking, with its treasures unharmed, even to the precious watch, which watch was Martha Moulton's chief treasure, and one of very few in the town.

Martha Moulton was the heroine of the day. The house was beseiged by admiring men and women that night and for two or three days thereafter, but when, years later, she being older, and poorer, even to want, petitioned the General Court for a reward for the service she rendered in persuading Major Pitcairn to save the court house from burning, there was granted to her only $15, a poor little forget-me-not, it is true, but just enough to carry her story down the years, whereas, but for that, it might never have been wafted up and down the land.—*Wide Awake.*

Painless Death.—Mr. Giffard, an eminent French aeronaut, who secured enthanasia by an invention of his own for inhaling chloroform, has bequeathed to the Government a sum to be devoted to institutions in which persons suffering from painful and incurable maladies may be allowed, with the consent of the friends, to shorten life by pain killers under the direction of medical experts. Other parties laboring in the same direction, are agitating the matter of executing criminals in a painless manner. A correspondent of the Sacramento *Union*, Mr. John Eithel, communicates a long article to that paper, suggesting a powerful electric battery or the use of carbonic acid as a substitute for hanging. Either would be quite painless and very simple in use. With the former, death is instantaneous. In using the latter the subject should be placed under a receiver, which might be made quite artistic and inviting. As soon as the acid rose to the mouth and nose there would be a slight struggle and all would be over. In either method there would be cleanliness and decency, and no failures could occur. One writer concludes with the following paragraph: "All this would be far more humane than to hang by bungling hands. The law certainly does not mean to torture the murderer. It only wishes to end his life, and the more swiftly it is carried out the more effective and painless it will be to the victim. The age we live in demands a change soon, for even in the punishment by death there may be progress. Civilization demands a change, because science offers far more humane methods, but at the same time makes the methods far more feared by the criminal than the old style of hanging by the neck.

Seven Girls and Their Diamonds.—Seven young ladies were perceived in a horse-car, of whom not one had both gloves on, and none were wholly bare-handed. Of these four had gloves on their right hands and three on their left, and in every instance the ungloved hand lay in the lap above the other. All of the seven bare hands had diamond rings upon them; and whenever any attention was needed by the hair or raiment of the ladies, in every instance the ungloved hand was used to bestow it, and in the necessary movements the stones flashed and glittered very much. And when, as happened in process of time, the seven young ladies left the car, one after the other, four of them waved their left hand to the conductor to direct him to stop, and the other three agitated their right hand, and again the rings sparkled quite copiously. All of which was very curious and interesting to the scientific mind.—*Boston Journal.*

Electricity is now employed in the rectification of inferior alcohol, generated by a voltaic battery and a dynamo-electric machine.

Thinking and Working.

Many people, workmen, as well as others, fall into the error of supposing that no brain work is necessary or desirable in mechanical labor. It is found that by going through a certain number of physical operations, the manufactured product is turned out; that these movements become, after a time, so easy that they are performed almost automatically, and that it is only by practice that perfection is attained. For these reasons it is thought that all a person needs in his work is the education of the eye, ear or hand, and that, by the training of any or all of these, a person arrives at the proficiency which is indicated by the term "skilled." It is undoubtedly, true that no amount of thinking will enable the steel-worker to tell when the metal is heated to the proper degree, and that it is only by the readiness of the eye in detecting the heat by the color that proficiency in this direction is acquired. No amount of brain work can take the place of that exquisite sense of touch which enables the file-maker to make the lines upon his steel so numerous that they can scarcely be counted by the unaided eye. No amount of learning can locate for the engineer the defective working in his engine which his acute sense of hearing discovers, and in very many other lines of industry the degree of accuracy which is attained, solely by constant repetition of the work, is very wonderful.

The question is, however, whether, in these very departments, the mechanic would not increase his value, both to himself and employer, were he to think while performing his work. It is certain that he would, by the use of his mind more perfectly, honor the nature of which he is possessed. The power to think is given by some writers as the distinguishing characteristic which divides man from the brute creation, and, if this be true, it ought not to satisfy anyone that he is able to perform his work in that perfunctory manner in which the horse walks in the treadmill. If he does no more than this, he is an automatic machine, which needs only to be wound up and set in motion in order for it to perform the work for which it was made. It is this stolid satisfaction with which one regards the product of his labor, which prevents many from bettering their condition and from becoming of any other value to their day and generation than that which is estimated by the daily out-put of their handiwork.

We do not think that a man should despise his work, or that he should be satisfied with anything short of his utmost capabilities in this direction, but we do believe that workmen, while they continue in the foundry or shop, should be valuable members of society, by reason of their intelligence and influence. They need not graduate from their trade to be as much esteemed as any other class of persons. In addition to this duty that he owes to society, the workman should be a thinker, because it is by the exercise of his mind while at work that he may devise an improvement in machinery or a new use for material which will be an advantage to all, at the same time that it materially advances his pecuniary interests. There is no place better adapted to the exercise of inventive talent than the workshop, and no man can use it to better advantage than he who, by his practical knowledge, knows what can and what cannot be accomplished by a combination of the five mechanical powers.

Had all workmen labored only with their muscle, and allowed their minds to be inactive, the world would not now be reaping the benefits or enjoying the pleasures of many of the mechanical inventions of our day. Neither is there anything in the peculiar surroundings of mechanics which prevents them becoming as intelligent as any other class in the community. It is not possible, nor indeed desirable for men to take books with them at their work, as Elihu Burritt did, but, by a judicious course of reading after working hours, they may acquire food for reflection which will keep their minds active throughout the day. Thought rules the world, and we see no reason why the laboring classes should not be as regal rulers in this sense as any. Thinking and working combined will make of them a power, and will so change their position that the possession of wealth, and honor, and influence will no longer be blessings to be enjoyed by an exceptional few of their number.—*Industrial World.*

An Electric Flat iron.—This novel flat-iron is chambered out near its smoothing face, forming a cavity for the reception of an electrical resistance, the latter being connected by suitable wires with a galvanic battery. The face of the flat-iron is heated by the radiation from the electrical resistance. A layer of non-heat conducting material is placed above the cavity in the iron, to confine the heat to the face of the iron.

Rotary Files.—A Connecticut machanic has made a trial of rotary files for finishing planed surfaces. He is of the opinion that quicker and truer work can be done with these than with hand files, and that the surface is in better shape for truing with the scraper. His experiments have been confined to the planer, but he believes that his device may be properly and economically adapted to the lathe and milling machine.

Silver is the most perfect reflecting metal, absorbing less than three per cent. of the rays of light.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (¼ inch), per issue	$ .75
One Square per month	1,25
Two Squares, per issue	1.50
Two Squares per month	2.50

☞ For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, - - July 15, 1882.

The New Laws.

The legislation of the Supreme Lodge at its last sesion will be found in this issue of the WATCHMAN. Some of the most important enactments were discussed in the preceding issue. That a full understanding of the scope of the enactments of the Supreme Lodge may be had, it may not be amiss to say that all amendments to the beneficiary law by the Supreme Lodge affect the whole Order, separate jurisdictions as well as others, and in the way prescribed by the law, except that where the word "Supreme" occurs, the Grand jurisidiction use only the word "Grand." This explanation is made, because in some of the enactments the wording might lead to a different conclusion. The law in regard to suspension and reinstatements will therefore be in effect, as follows, in this jurisdiction.

Delinquents are divided into three classes.

1. Those in arrears for 3 months and 20 days.
2. Those in arrears for over 3 months and 20 days, and under 6 months and 20 days.
3. Those over 6 months and 20 days, and 20 days.

Reinstatement in the first division or class can only be effected by:

1. Paying just the same amount into the beneficiary fund that would have been required of the member, had he remained in good standing.
2. Such payment must be reported to the Lodge at a stated meeting thereof.
3. The Lodge shall then vote on the application for reinstatement, and if a majority of the members present vote in favor therof, the M. W. must declare the reinstatement.

Reinstatement of a member in the second division requires:

1. A re-examination by the Medical Examiner of the Lodge and a favorable report thereon by said officer.
2. He shall pay all assessments for which he would have been liable, had he remained in good standing.
3. A majority of the Lodge then voting in favor of the application for reinstatement, the M. W. will declare the member reinstated. In case the beneficiary certificates of an entire Lodge have been suspended under the beneficiary laws, and when the same have remained suspended for the space of three months, from and after the date of said suspension, it shall be the duty of the Grand Master Workman to suspend the charter of said Lodge, and should the members thereof desire to be reinstated at any time within the period of six months from the date when their beneficiary certificates were suspended, they must obtain the consent of the Grand Master Workman thereto, and must comply with the provisions of Sec. 13, of the Beneficiary Article.

Those coming in the third division have lost all rights, of whatever kind they once had, in the Order. They are known as persons "suspended from the Order." The same thing occurres when a member is suspended for six month's arrearages of dues, or when suspended for six months as a penalty on trial and conviction for an offense under our laws. The requirements for reinstatement are these:

1. An application, as in case of a new member, re-examination and favorable report of the Lodge Examiner and Medical Board of Grand Lodge.
2. Payment of arrearges to the beneficiary fund *up to the time of suspension from the Order.* In no case can it be more than for six month's arrearages, and if such arrearages amount to more than eight dollars, only eight dollars can be collected therefor.
3. Payment of not less than two dollars to the general fund of the Lodge.
4. Payment of any arrears for dues up to the time of suspension from the Order. The arrearages for dues may be more than what would accrue in six months, for a Lodge is not obliged to suspend a member for six month's arrearages of dues, and sometimes on suspension from the Order the member owes for more than six months. But dues cannot be computed after the time a member was suspended from the Order.
5. A ball-ballot and favorable result, as in case of original application.
6. If accepted, the reinstated member must pay one dollar for next call on the beneficiary fund, after his reinstatement. If rejected, the moneys paid, except for medical examination, must be returned to the applicant.

All Medical Examiner's reports, after disposal by the Lodge, should be transmitted to the Grand Recorder, to be placed on file and made a matter of record.

For the law in relation to the reinstatement of members of a defunct Lodge, see the text, Laws of General Application, No. 36, found in the Supreme Lodge circular.

The other matters contained in the circular sufficiently explain themselves. We believe that what was done by the Supreme Lodge at its last session was done wisely and well, but actual experience alone can fully determine this.

New Hall Dedication.

Fidelity Lodge, No 136, assembled in large numbers at their new quarters, Fidelity hall, No. 218 Post St., on Wednesday, the 5th inst. This Lodge room is one of the largest and handsomest in the State, and no expense has been spared to make it convenient and comfortable. The ante-rooms are large, well arranged, and in every respect suitable for the purposes designed.

Shortly after the Lodge was opened the Grand Lodge Officers were announced as being in readiness to install the officers, after which they were received with honors, and District Deputy Fish at once proceeded with the installation. This interesting ceremony being over, the business of the Lodge was soon dispatched until "Good of the Order" was reached, when the newly installed Master Workman announced that he would retire from his position temporarily, and invited Past Master Symmes, as Chairman of the Entertainment Committee, to occupy his seat. Bro. Symmes took the chair, and after a few pleasant preliminary remarks, announced a piano solo by Bro. Seib, as the first on the programme. It is needless to say that Prof. Seib's efforts were such as to show the work of a true and accomplished artist. Bro. Swan, a member of Friendship Lodge, was then called upon, and rendered in excellent style a song that was acceptable to all. Prof. Eastman of Mission San Jose Lodge, No. 56, then recited in an easy and graceful manner, the "Charcoal Man," which was well received. Past Master Reading, Inside Watchman-elect, was then introduced, and proceeded to deliver his excellent address on "Fraternal Societies." During the delivery of the address Bro. Reading held his highly pleased audience for a half hour, and was frequently and loudly applauded. After the address Bros. J. T. Cutting and G. H. Stewart favored the Lodge with songs, and after an hour of real, genuine solid enjoyment and instruction the successful entertainment was brought to a happy close. Long live Fidelity Lodge, No. 136.

WM. H. BARNES, G. M. W., returned from the East on the 6th. During his absence, as usual, he was kept busy by the public and his brethren, delivering addresses in various places. Among these was a lecture to the prisoners at the Cincinnati prison, by invitation of the Directors, and an address before a mass meeting of the children in Milledgeville, Georgia. At Atlanta, Georgia, Brooklyn, New York city and Chicago, Illinois, he was the recipient of marked attention from his brethren of the I. O. O. F., and the press of these various points speak in enthusiastic terms of his orations on the occasions named. At Cincinnati he visited American Lodge, No. 9, in company with Grand Recorder Pratt, and in Boston, Mass., he conferred the degrees in, and addressed Beacon Lodge, No. 1, of that city, and was the guest of the Grand officers of that jurisdiction. Upon his return he has gone immediately to work, and has mapped out a large area to visit, and, as in the past, the order will be to keep the fires burning brightly throughout the State.

BRO. FRANK STEWART has kindly consented to assist in the entertainment to be given by San Francisco, No. 4, on Wednesday evening, July 19th, to aid a distressed Workman. Frank plays a whole band at once, and is a fine vocalist. It is worth the price of admission to hear this unique performance.

The Order.

The tenth annual session of the Supreme Lodge, A. O. U. W., met June 6, 1882. It is a time eminently suited to reflection. Fourteen years ago the A. O. U. W. arose in its infancy. It has now arrived at a certain stage of maturity, and it becomes both pleasant and instructive to review its past. The Order was established by J. J. Upchurch, at Meadville, Pennsylvania, October 27, 1868. It was 1873 before there were 2,000 members in the United States, in which year, February 11th, the first session of the Supreme Lodge was held at Cincinnati, only Pennsylvania, Ohio and Kentucky being represented, with four representatives each. At the tenth annual session 21 jurisdictions were represented, including every State and Territory in the United States, besides the provinces of Canada. The membership now reaches 107,000. This Order has spread like the vine which was brought out of Egypt. Its branches extend all over the land, and many are the bunches of ripe and perfect fruit it has borne. The weary traveler or sojourning stranger finds comfort and refreshment beneath its kindly shade, the violence of grief is softened by its goodly offering of fruit, while still it is dropping the seed of everlasting life. The first Lodge of the Order organized in this State was California No. 1, of Oakland. Horace G. Pratt, present Grand Recorder of this State, was one of the early members of the Order. He came to this State and founded California No. 1, August 21, 1875. The Grand Lodge of this State was formed Nov. 13, 1877, with ten Lodges and 335 members. California was declared a separate jurisdiction July 16, 1878, with 2,000 members. There are now in this jurisdiction above 15,000 members. For the year 1881-82 $1,503,555 was paid by the Order in death benefits. The following condensed tables, extracted from the report of the Supreme Recorder, will show the same interesting statistics:

Tables Showing Condition of the Order for 1881-'82.

GRAND LODGES.	Average Membership.	Average No. of deaths per 1,000.	Total amount paid on death losses during year.
Pennsylvania	12 525	8.22	$ 204,016.00
Ohio	2,990	18 30	66,539.00

Total	101,685	764		

General Average.

Average duration of membership of those who have died during the year 1881-'82	2 yrs 4 mos 16 days
Average length of time intervening between death of members and payment of loss for the year 1881-'82	2 mos 11 days
General average of assessments for the entire Order for the year 1881-'82	17 1-7
General average membership for the entire Order for the year 1881-'82	93,302
Average death rate per 1,000 members for the year 1881-'82	8.18
Average monthly disbursements of beneficiary fund for the year 1881-'82	$125,296.32
Average membership by Lodges for the entire Order for the year 1881-'82	43
Average age of members admitted to membership for the year 1881-'82	36 years
Average age of members suspended and withdrawn for the year 1881-82	34 years
Average age of members who have died for the year 1881-'82	40 years
Average age of membership for the entire Order for the year 1881-'82	38 years

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41. St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. PRATT, G. R.

WM. C. FLINT, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

THERE seems to be a considerable increase of enthusiasm amongst our Lodges all along the line, notwithstanding our heavy death rate. The new law requiring all medical examinations to be passed upon by the examining board before any degrees can be conferred on an applicant is getting to be better understood, and works as smoothly as could be expected. A good deal of time could be saved if all Lodges, on receipt of a Medical Examiner's report, would appoint an examining committee and then forward the paper at once to the Grand Recorder. In most cases it would be returned in time for next Lodge meeting, when the committee could be ready to report. But no committee should report on an application till they had thoroughly examined the physician's report to ascertain, so far as they are able, whether truthful answers were made by the applicant to the questions asked. Of this matter committees can usually tell better than the physician. When all is said and done the Lodge physician and Lodge are far better judges of the fitness of an applicant to become a member of the Order than all the Chief Medical Examiners and boards in the world. The chief and almost only good of such supervising power is simply to see whether, according to the Lodge Examiner's report, the candidate comes within the rules of eligibility. If he does not he must be rejected; but, otherwise approved. This is almost the invariable rule. Hence the great necessity of correct reports on applicants.

THE great majority of our Recorders are prompt and efficient in their duties, but a few are chronic delinquents. As a result every month we are compelled to be constantly changing our books to correct errors, and make estimates of membership in reporting to the Supreme Lodge where we ought to have exact figures. Monthly reports should be sent in promptly on the first of each month and never delayed longer than a week, except in cases of positive inability. Good Recorders should never be changed if they can be persuaded to serve, but bad ones cannot be got rid of too soon. Success, present and future, must come of work well performed. The Recorder and Financier are the two most important officers in a Lodge. A Lodge may get along very fairly with a poor Master, but a failure in either the office of Recorder or Financier will demoralize the whole body and neutralize the best efforts of all the other officers put together. We have many Recorders and Financiers who have held their positions for many years, and will no doubt continue therein so long as they are able to serve; at any rate it is to be hoped they will. And their respective Lodges should not be niggardly towards them. An increase of salary now and then will, in most cases, be found an excellent investment of a littlemoney that will bring abundant interest.

THE laws passed at the recent session of the Supreme Lodge will be sent out in leaflet form to all our Lodges with the assessment notices for next month.

WE shall have not less than two assessments for August. Let every good Workman be prepared for it.

DON'T let your membership run down. If you lose a member from any cause, fill his place with at least one good man, if such can be found, and generally he can with very little exertion. Full ranks make few assessments, and vice versa.

IF you wish to wear the greatest invention of the age in the shoe line, get a pair of Bro. P. Kelly's patent boot and shoe combined. He also manufactures ladies' fine shoes. Call at 218 Kearny street.

FIDELITY SOCIAL CLUB, an offshoot of Fidelity, 136, A. O. U. W., and Fidelity Lodge, K. of H., has elected the following officers for this year: President, J. G. Geisting; Vice-President, John W. Rourke; Secretary, E. F. Beals; Treasurer, J. B. Russell. It was agreed to give an entertainment on the third Wednesday in August.

E. F. LOUD, Deputy Grand Master, has issued a call for a general meeting to be held in Fidelity hall, 216 Post street, on Wednesday evening, July 26th. This is to be an official visit of a number of the Grand officers and general gathering of Workmen in the new hall, which is large enough to accommodate all that may attend.

SAN FRANCISCO LODGE, No. 4, will give an entertainment in Cosmopolitan hall, B. B. building, on Wednesday evening, 19th instant. The tickets of admission will be put at 50 cents, and the gross proceeds will be given to Bro. Kern, who lately met with an accident and had his leg broken.

FIDELITY, 136, conferred the J. W. degree on three candidates Wednesday evening, July 12th.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "good of the Order."

San Francisco, No. 4.

The pioneer Lodge of this city has had a season of prosperity during the last term that is worthy of mention. Its whole history from its organization has shown careful attention and close scrutiny taken as to membership, seeking quality rather than numbers. This Lodge has reached the 150 mark, been organized over five years and lost but one member by death. The retiring M. W., D. C. Breed, has won for himself an honored position in this Lodge, equal to any of the worthy officers who have preceded him. On Wednesday evening, July 5th, the J. W. degree was conferred on one candidate, and the M. W. degree on two. The Grand Officers, consisting of E. Danforth, acting as Grand Master; W. S. Hout, P. G. M.; F. Fuller, G. F.; A. W. Prevost, G. O., and George Jordan, G. G., installed the officers elect, each one being at his post. The ceremonies of installation were performed with a degree of precision and dignity that was alike pleasing and impressive. This very interesting meeting was closed by inaugurating an entertainment on Wednesday evening, 19th instant, the proceeds of which will be given to help Bro. Kern, of this Lodge, who, a short time since had his leg broken.

Harmony, 9.

This pioneer has made a fine record during the last six months. Bro. F. Blight, the acting P. M. W., with the able corps of assistants, have labored very hard to make this the banner Lodge in this jurisdiction, which in many respects has no superior. The Lodge meetings are always well attended, and the officers, as a rule, are always at their posts. It is a singular coincidence that the increase in members has been 37 for each of the last two terms, which brought them up at present to over 250 Workmen in good standing. The new term has started off with bright prospects. On July 10th several propositions were received, and the J. W. degree given to seven candidates, whose average age was 34 years. It is safe to anticipate their membership to reach over 300 by the end of this term. It is always pleasant and interesting to attend the Lodge meetings of Harmony, No. 9, and on each evening you may always find a number of visitors.

Bernal, 19.

On Monday evening, July 3d, the installation services were perfored by J. D. Thompson, District Deputy. The following Grand Officers assisted A. A. Egelston, G. P. M. W.: G. Powell, G. F.; Geo. Haughton, G. O.; E. T. Thompson acting as Grand Guide. The installation services were given in a dignified and impressive manner from memory, without reading from the ritual. The District Deputy, Bros. Egleston, Powell, Delano, Henderson, Richmond, Lamont, Culin, Worth and Sanchez, at the close made short speeches that were very acceptable to the brethren.

Spartan Lodge, 36.

Lodge prosperous and rapidly increasing; number of members, 166. Officers perform their work promptly and accurately. Four Junior Workmen will be initiated July 15th.

Magnolia, 41.

Magnolia Lodge, 41, celebrated their fourth anniversary at Covenant hall, B'nai B'rith building, on Wednesday evening, July 12th. There was a very large and select attendance. The hall was elaborately trimmed and festooned. Golden letters were suspended across the stage —"Welcome, Magnolia, 41, A.O. U. W., 1878—1882." Spirited and real enjoyable dancing was kept up until 11 o'clock, when supper was had in the banquet-room. There was quite a number of distinguished persons present, and the ladies were dressed in very fine style. Blumenberg's band discoursed good music to this happy company, and the opinion was freely expressed that Magnolia's fourth anniversary party was one of the best that has been given this year. A programme of 16 dances, with extras, carried the time to the "wee sma' hours," and the efficient committee, with their fine rosettes and goodly labors, rested on their laurels. We herewith give the several committees: Committee of Arrangements—J. Davis, A. N. Levy, C. Brind, H. P. Terry, J. Hoesch. Reception Committee—John Tyler, J. Rafferty, Geo. Dietterle, L. Stark, F. Kitz. Floor Manager—H. P. Terry. Floor Committee—W. E. Cody, B. F. Jacobs, Wm. Hoesch, M. Warschauer.

Sts. John, 73.

The officers of Sts. John, 73, were installed by Deputy Fish, with the following Grand Officers assisting, W. B. Smith, P. G. M. W.; Henry Wolfsohn, G. F.; G. Schoenwald, G. O.; Frank Rossbach, G. G. The services performed were of a highly interesting character, given with grace, precision and dignity, the Deputy giving the ritual from memory. At the close each of the Grand Officers made acceptable remarks, particularly the speech of Deputy Fish, which was of exceeding merit and eloquence. Brothers Jephson, Prince, and Fletcher, on the part of Sts. John Lodge, were quite happy in responsive words, and a very interesting meeting was had.

Friendship, 179.

This young Lodge will celebrate their second anniversary on Wednesday evening, July 19th. The exercises will be literary and musical, and we may expect a choice programme,

Excelsior, 126.

On Thursday evening, July 12th, we paid Excelsior, No. 126, a visit. This was entertainment night, and Bros. Fiske and Dr. Sobey related their late experience in the country, which was quite interesting. Geo. A. Bordwell, F., gave a reading, followed by an original essay by Sam Booth, P. M. W.; Frank S. Poland, D. D., read a humorous piece, followed by a sentimental song, by request, by the Grand Master; Bro. Howard, O., closed the entertainment by reading an interesting character piece. Wm. H. Barnes, G. M. W., then gave a succinct history of some interesting facts, the prominent features of our Order in the East, and the legislative enactments of the Supreme Lodge. This thriving subordinate has 600 carefully selected volumes in their library, and $67 in the hands of Bro. Silas White, librarian, which was, by vote of the Lodge, ordered to be expended in purchasing new books.

Memorial, 174.

Bro. F. S. Poland, Deputy, assisted by Sam Booth, G. P. M. W., J. F. Jenness, G. F., G. Bardwell, G. O., and C. N. Payson, G. G., installed the officers-elect of Memorial, 174, on Monday evening, July 10th. The service of installation was in every way of the highest degree of excellence. The ritual was given from memory, and in a very pleasing manner. At the close a short time was spent in hearty congratulations and speech making. Memorial is composed largely of young men, and we believe it still maintains the position of having the lowest average age of any Lodge in this jurisdiction. The worthy brethren who have acted as Master Workmen in this Lodge have been among the most useful in our Order. The present Master Workman, Bro. Frank A. Brooks, entered upon his duties, and from what we saw of his official action, he will be worthy of the honored position he occupies.

Triumph, 180.

This young Lodge has now attained a membership of 150, and has not been organized two years. Their Lodge meeting on Tuesday evening, July 11th, was a very interesting one. The J. W. degree was conferred on one candidate, and one member was admitted by card. The business of the Lodge was carried on correctly and with dispatch, and the secret and ritualistic work was given letter perfect in a very pleasing and effective manner. I. W. McKay, Deputy and charter member of this Lodge, with the assistance of an able corps of assistants, installed the officers-elect, after which Bro. C. G. Jackson, in a short and appropriate speech, presented the acting P. M. W., Jas. G. Boobar with a gold P. M. W. badge, on the back of which is engraved the following: "Presented to P. M. W., J. G. Boobar, by the members of Triumgh Lodge, No. 180, A. O. U. W., July 11, 1882." This was a real surprise to Bro. Boobar, but the souvenir was accepted with good grace and properly responded to. Several distinguished brethren present, at the close made congratulatory speeches, and ended a very triumphant meeting. We are also in receipt of a spirited description of this installation meeting from "One of Triumph," but, owing to lack of space, cannot publish it all. In concluding, he says: "But the shorest speech of the evening was that of H. H. Russel—for example, see shortest verse in the Bible. However, we were all happy in our good work, and full of determination for future progress, with many good wishes for the beloved A. O. U. W. and the success of the PACIFIC STATES WATCHMAN."

Installation of Officers of Golden Dawn Lodge, D. of H., No. 10, and Visit of Silver Spray, No. 3.

On Saturday evening, July 8th, the officers of the above Lodge were installed, by District Deputy, Frank S. Poland, assisted by the following Past Officers of Silver Spray: Sisters McDonald, Thompson, Jones and McNear. A delegation of 26 members from Silver Spray were present. During recess the good things provided by Golden Dawn were partaken of, under the head of "Good of the Order." Brother Reading made some pleasant remarks, expressing the good wishes of Silver Spray to the Mission Lodge, which he knew was reciprocated by the whole of Silver Spray. Bro. Black made some humorous remarks, and after a few words from Sister Jones, Sister Black gave a song and piano accompaniment. Bro. Gunnison, of No. 10, returned thanks for the visit and expressed a wish that the ladies of Silver Spray would be often seen within the Lodge of Golden Dawn. Bro. S. Booth gave a song, accompanied by his daughter on the piano, and after some remarks by Bros. Filmore and McDonald and Sisters McDonald, McNear and Thompson, and a piano solo by Bro. Pierce, a very pleasant evening was brought to a close.

Silver Spray, D. of H.

The installation services in Silver Spray Lodge were of a very interesting character, and the officers and visitors from Golden Dawn and Aurora were quite numerous, filling the cosy hall to overflowing. After the installation services, E. M. Reading presented the P. W. S. of H. with a gold jewel in the shape of a heart, on which is inscribed "*Ta litha cumi;*" on the opposite side is engraved "Ellen Jones, W. W. T. Q. E." The speech of Bro. Reading was quite appropriate and complimentary, saying that Sister Jones had passed all the chairs. Bro. F. Fillmore, in his quaint manner, then presented the P. W. S. of H. with an elaborate floral offering and a large flower basket. During the evening Bro. and Sister Clark, with the inimitable Bro. Booth, entertained the large company with a fine song, and answered several recalls. Sister E. Holland, P. W. S. of H. of Aurora, extended an invitation to all to be present at their installation on the 18th inst. This intellectual feast was finished by a banquet that was worthy of the occasion. This was one of the gala days in the history of Silver Spray Lodge, and a very enjoyable evening for all who were present. The following officers were installed: Mrs. E. Jones, P. W. S. of H.; Mrs. C. H. Caldwell, W. S. of H.; Mrs. F. Lord, S. of H.; Mrs. C. Sanson, S. of C.; Miss L. McNear, S. Secretary; Mrs. A. E. Macdonald, S. Treas.; Miss Belle Lyle, S. Usher; F. Eillmore, I. W.; R. Mayo. O. W.

Lodge Locals.

Yolo, 22.

S. M. Griggs, Recorder of Yolo Lodge, No. 22, writes as follows: Enclosed please find list of officers, which were installed Tuesday evening, July 11, 1882. Our Lodge now numbers 103 members. We have had no deaths in our Lodge, and never had occasion to expell any member.

Healdsburg, 31.

The brethren in the A. O. U. W. of Healdsburg were delighted with a visit on Friday evening, June 30, by brethren from abroad. From Santa Rosa came the Master, John Miller; Master-elect, George Hall; Overseer, Alex. Laughlin; Guide, F. Fick; Inside Watchman, John Muller, and Bros. M. Schramm, Dr. Warboys, H. Pfiester, Ed. Colgan. From Cloverdale, William Davis, Overseer-elect; Frank Spencer, Rvr., and Bro. John B. Cooley. A party of 10 were coming from the latter place, but sickness prevented all from attending. The degrees were conferred in the Lodge-room, and after supper in the Sotoyome house, speeches were indulged in, of a very happy and fraternal character. Healdsburg has a large Lodge, with expert officers in the Recorder's and Financier's chairs, which is essential to an Order guaranteeing $2,000 to the widows or heirs of deceased members. It is expected that Santa Rosa and Cloverdale Lodges will carry away the laurels hereafter. The following officers of Healdsburg Lodge were elected, and will be installed next Friday night by L. A. Jordan, P. M. W., for A. G. Burnett, D. D. G. M. W., who will be called away to install at Petaluma: John D. Hassett, P. M. W.; Wm. Tull, M. W.; C. F. Montgomery, F.; E. K. Vaughn, O.; Joseph Fitch, G.; A. A. York, I. W.; Peter Dervin, O. W.; J. Luedke, Rdr.; C. D. Carter, Fin.; J. L. Bates, Rvr. The Lodge has 100 members, is growing, and has abundant funds.—*Russian River Flag, July 6th.*

Lincoln, 83.

A correspondent writes us that the celebration given at Lincoln under the auspices of the A. O. U. W. was a grand affair. The programme opened with a procession of horribles, which was quite a success. Three prizes were given, one of $12.50, one of $7.50, and one of $5. A person representing a bear took the first prize; the second was awarded to Girard Peters, for personating G. D. Aldrich. The Declaration was read by J. F. Gladding; the oration was delivered by Judge Ronald, and Mr. J. A. Filcher, of the Auburn *Herald*, read the poem. After these exercises followed the barbecue dinner, consisting of roast beef and mutton, bread, cheese and pickles. Dancing and eating ice cream were the principal features of the afternoon, and were kept up till about six o'clock. Some say there was the largest crowd here in the day time ever seen in Lincoln. In the evening a grand ball wound up the celebration.

Wilmington, 130.

EDITORS WATCHMAN:—Inclosed I have the pleasure to send you the names of our new officers. Bro. P. M. W. Bush installed the officers here, Saturday, July 1st. Our D. D. G. M. W., Bro. I. A. Dunsmoor, would not come. We are doing well in the Lodge, always a good attendance, and officers that attend to their duty. Since Dec. 31, 1881, we have had eight new members by initiation and one by card; we have now 44 M. W., and three applications for membership; so I think that before the end of this term we will be near 50 M. W.—J. F. C. JOHNSON, Recorder, Wilmington, July 3, 1882.

Banner, 131.

We are pleased to learn from J. Steinmetz, Recorder of Banner Lodge, No. 131, Plymouth, that the Lodge is in a prosperous condition financially and otherwise.

Amador, 133.

EDITORS WATCHMAN:—Our Lodge is not growing any, but it is owing to our being very particular about getting members of the right article. Bro. D. R. Miller, our first Foreman, met with a very painful accident last Thursday, while going from his wagon and blacksmith shop, in Amador, to his home, in Digtown. His horse became frightened by a passing band of goats, when the horse, buggy and driver were thrown over a bank nine feet high, and fell among a lot of broken dishes, rocks, etc. A neighbor saw him go over, and assistance was at hand in a few minutes. On taking him out, it was found that his leg was broken above the knee, a cut was on his head, and he was bruised generally. He is now in his own home, nursed by a loving wife and family. He complains of a severe pain in his back. Bro. J. A. Greenwood, of our Lodge, met with a painful accident by sticking a pick in his left foot. It is a painful wound, but Bro. G. is improving. Bro. John Brewer, of our Lodge died suddenly July 8th, of heart disease. His wife has been dead several years. He leaves a daughter, aged 17, and a son, aged 14. In addition to the $2,000 in our Order, he is also a member of the Workman's Guarantee Fund, and is entitled to another $1,000 there, making $3,000 in all. Yours, in C. H. & P., JOHN R. TREGLOAN, Recorder of 133, Amador, July 8, 1882.

Blue Canyon, No. 184.

We are in receipt of a brief note from Mr. J. F. Boldon, M. W. of Blue Canyon Lodge, stating that everything is running smoothly, and that he hopes to be able to send us something of interest soon. From personal acquaintance with members of Blue Canyon Lodge we can say that it has some excellent gentlemen on its roll.

San Fernando, 214.

EDITORS WATCHMAN:—San Fernando Lodge, No. 214, A. O. U. W., re-elected the old board of officers, to be installed at regular meeting, Saturday evening, July 8th. We have 26 members, with two additional applications. All are enthusiastic Workmen, and work for the good of the Order.—Yours in C. H. & P., EL. HAMMOND, San Fernando, July 3, 1882.

Oakland Lodge Locals.

Presentation at Keystone.

Notwithstanding it being the nation's holiday, all the officers elect were present for installation. After the order of business was completed, and the Recorder, Bro. Charles E. Alden, who is also D. D. G. M. W., had retired to the ante-room to prepare for installation, he was recalled by Bro. Thorn and introduced to the Overseer, Bro. Kilpatrick, who, after a few cutting remarks in the form of a sharp lecture, and for the purpose of making Bro. Alden feel as miserable as possible, told him to present himself at the M. W.'s station. Bro. Menges, acting M. W., rose and said: "It is my pleasure, and yet embarrassing duty, on behalf of Keystone Lodge, No. 64, to present you with this badge; please accept it as a token of our love and esteem for you, and of our appreciation for your long, faithful and efficient services in the high offices of honor and trust you have so ably filled, and may it inspire you to a happy and noble career, in future." Bro. Alden was very much surprised, and in a few fitting remarks thanked his brother Workmen for the honor they had conferred on him by presenting him with such a beautiful gift. The badge, which is a P. M. W.'s, is a beautiful piece of workmanship, and has engraved on the back, "Presented to Chas. E. Alden, P. M. W., by the members of Keystone Lodge, No. 64, A. O U. W., July 4, 1882." It is encased in a handsome Russia leather case lined with rose-colored silk. The badge is of gold and enamel—as handsome as any we have seen. Bro. Alden has been in one or other of the chairs since Keystone was organized, and never misses a meeting. He was one of the members of the recent Grand Lodge, and has received as a reward for his attention to the A. O. U. W. the fitting honor of the District Deputyship. Bro. Alden is one of the mainstays of Keystone Lodge, being always at his post and always active in the interests of the Order. The testimonial presented was only a slight token of the esteem in which he is held by his fellow Workmen.

MECHANICS' INSTITUTE EXHIBITION. — The Seventeenth Industrial exhibition, given by the Mechanics' Institute, will be open at the pavilion for the reception of goods from and after Tuesday, August 1st. The exhibition will open to the public on Tuesday, August 15th, and will continue until Sept. 16th. All goods for competition must be entered by August 18th.

Business Announcements.

Kid Gloves a Specialty.

FURNITURE.

H. Schellhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

About Obtaining Patents.

Patents Are Virtually Contracts

Between inventors and the public. The consideration flowing from both parties to the contract is expressly fixed by statute. The Government requires the following consideration in every case: First, that an applicant for a patent shall disclose a new and useful improvement, of which he is the first and original inventor. Second, that the invention has not been patented, or published in a printed publication, prior to the date of his *invention*. Third, that the invention has not been in public use, or on sale, more than two years prior to his application for a patent. Fourth, that the invention shall be properly described and claimed in the specification forming a part of the patent. Provided an inventor complies strictly with these conditions, the Government guarantees that the inventor shall have the exclusive right to make, use and sell the thing invented for the term of 17 years.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, that it may afford him complete protection for his invention during the life of his patent.

Secure a Good Patent

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. This question can often be answered gratuitously by us immediately on receiving full information of the invention, by reason of our long and extensive practice as patent solicitors and editors and publishers of first class scientific and industrial journals during the past 20 years and over. When the question of priority of invention is not so readily to be determined, it is generally best to make what is termed a "preliminary examination" by searching through the patent office reports among the patents in the class to which the invention relates, and referring to our extensive patent library, containing compilations of special classes of American and foreign inventions, mechanical dictionaries, scientific encyclopedias, files of scientific and mechanical newspapers, and an immense number of patent applications by inventors of the Pacific coast, carefully filed by this office since 1860.

If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive for the small fee of $5 for the examination a verbal or written report showing definitely whereby his invention has been anticipated, thereby saving him further expense and perhaps much time, useless delay, anxiety, etc.

To avoid all unnecessary delay, however, in securing patents at the earliest moment practicable, inventors will do well to forward a model, drawing, or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with $15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately, and forwarded to the inventor for his signature. When the inventor receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps to be taken.] When the patent is allowed, the inventor will be duly notified, and on sencing the final Government fee of $20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretence of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give a case up as long as there is a chance to obtain a patent. The Agency charge is from $25 to $30, or sometimes more, if the invention is intricate or complicated, or requires much labor. Drawings cost from $5 upward, according to their number and the time employed; and, if a model is sent, the express charges upon this and the papers must be added. The total cost, in addition to Government fees, rarely exceeds $40, and for this we do all we can without appealing the case.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients sufficient to make the experiment, and also of the manufactured article itself must be furnished.

Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are considered more satisfactory to the Patent Office than the old and more cumbersome system of storing up an immense bulk of almost numberless models.

Drawings or sketches sufficient to illustrate clearly the invention, with a sufficient description to enable us to make a full set of perfect drawings for the Patent Office is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it for our use.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or very poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sales had the invention been fully portrayed by artistic and skillfully executed drawings. Again, when patents of this character are brought into court, the uncertainty and ambiguity of the drawings enable the opposing experts to mystify the judges as to the construction or combination of parts intended to be covered by the patentee. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken that the invention is fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

In the Patent Office

The application is assigned to the Examiner having charge of the class to which the invention relates. The case must then take its turn with others in the order of filing, and in due time is carefully examined to test the novelty of the invention. If the Examiner fails to find any thing that anticipates the invention, a patent is immediately allowed, provided the specification and claims are drafted in proper form. Should the Examiner find a prior patent which, in his opinion, anticipates one or more of the claims in the application, a letter of rejection is sent to the attorney in charge of the case; and if the attorney coincides with the views of the Examiner, the claims rejected are erased. In preparing applications for patents, an attorney should be careful to familiarize himself with the class of inventions to which the application pertains, so that the specification and claims may be drafted as nearly perfect in the first instance as is possible. This course saves much time in prosecuting the application to a patent.

When claims are improperly rejected on patents which do not anticipate the spirit or wording of the claims, proper steps are immediately taken to convince the Examiner of his error. This is done, in most part, by personal arguments, as the differences in construction, operation, function and results are more readily discovered and appreciated by an oral presentation of the facts than can possibly be done by relying solely on written arguments. In order that the Patent Office record of the patent shall be complete, an oral argument is generally supplemented by a manuscript brief, that others, in examining the files at any future time, may clearly comprehend the position taken by the Examiner and attorney in prosecuting the case to patent.

In addition to our own personal attention to the interests of our clients here, we have, for over 12 years past, had constantly in association with us in Washington, one of the soundest legal counselors and ablest of practitioners in patent business in this country, who carefully attends in person to our business at the Patent Office and has attained success in a most marked degree.

Perfect Claims.

The value and force of a patent are dependent on its claims. A patent may disclose to the public the most important and valuable invention, and yet the claim be of such meager scope that the patent is actually worthless. When the claims of a patent are so loosely drafted that infringers can flood the market with improvements, differing from the improvement disclosed by the patent only in slight changes in construction and arrangements of parts, such a patent is valueless to the owner, as it fails to afford him that exclusive and complete protection guaranteed by the Patent Law. Hence it is that the greatest care, skill and perseverance are required, first in properly drafting the claims in the first instance, and, second, in prosecuting the application before the Patent Office, and maintaining the rights of the inventor to claims as broad and sweeping as the invention will warrant. This latter is no easy task. The Examiners of the Patent Office serve in the capacity of attorneys guarding the interests of the public. It is their sworn duty to exercise the greatest care and watchfulness, that patentees do not secure claims of greater scope than they are justly entitled to. It is but natural that Examiners are sometimes in error as to just what scope should be accredited an invention. Although the Examiners act under honest convictions in cases where they refuse an inventor his just rights, yet it is the duty of the attorney to maintain the claims of his client, if he is convinced that they are just and proper. To succeed in this requires the display of tact, firmness and ability; and when the Examiner is made to see that the inventor is honestly and fairly entitled to the claims which have been rejected, he will almost invariably recede from his former action, and allow the case.

Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. (continuously editors and publishers of the MINING AND SCIENTIFIC PRESS, nearly from its early commencement in 1860) offer comparatively far better facilities to the local inventors of the Pacific States and Territories than are possessed by any other agents in America. Members of the firm give personal attention to the applications entrusted to their care. They have been longer in practice in patent soliciting than most agents who are still personally engaged in the business. They have secured more U. S. and foreign patents in the past 20 years (with very few exceptions) than any other firm still existing. Their practice has been successful and long continued that the great majority of inventions on this side of the American continent have been patented through their agency, thus affording them great and valuable experience, by thorough information of the true principles and points of novelty in the inventions, whether general in character or peculiarly local to this coast.

The extensive business combination and experience of this firm is undoubtedly one of the most fortunate in existence for affording inventors prompt and reliable advice and the best possible facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention in one or more of our influential and reliable newspapers, affording just the circulation that is best calculated to widely inform the class of readers most specially interested in the subject of his invention.

Saving of Time, Etc.

Inventors on this coast will find that owing to our familiarity with inventions and local affairs of this coast, we can more readily and fully comprehend their wants, and thus save much of the time ordinarily consumed in preliminary writing back and forth when distant agencies are employed.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee is $10 additional.

To enable us to prepare caveat papers, we only require a sketch and description of the invention.

Rejected Applications.

Inventors who have rejected cases (prepared either by themselves, or for them by other agents), who desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so.

DEWEY & CO.,
Patent Solicitors, Office of MINING AND SCIENTIFIC PRESS,

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation, etc., to the publishers of this paper.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M. P. OWEN—Santa Cruz county.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
B. W. CROWELL—San Luis Obispo and Santa Barbara counties..

Rooms and Board in Oakland.

Rooms (with or without board) can be had in Oakland on reasonable terms, with a family of English people, location, a pleasant one within 3 blocks of Postoffice. Good references furnished and required. Call or address No. 1274 Franklin St., Oakland, or enquire at the office of this paper.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

DO NOT DELAY.—Send us your subscriptions promptly. Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.

IMPORTANT RECOMMENDATIONS.
Remarkable Cure of Dropsy.
VALLEJO, June, 1882.
I suffered intensely with dropsy, and was induced by Mr. Edgecomb to try Anderson's Springs, he having been cured there, after undergoing frightful agonies, being tapped three times before he reached there; and I am deeply grateful for taking his advice, for such a beneficial effect had the Springs on me, that I am now entirely cured, and advise all who may be suffering to try Anderson's Springs. KATE MACKAY.
Sight Restored.
A candid and well-known gentlemen of San Francisco certifies briefly as follows:
May 31, 1882.
"I was cured of inflammation of the eyes at Anderon's Springs, Lake county." M. J. DURNEY, 425 Brannan St., S. F.
Many other cases of Dropsy and Paralysis, Rheumatism, Swelling of Limbs, and various other obstinate cases of chronic diseases have been cured from year to year, at the above-named springs, which are located in Lake county, 19 miles from Calistoga. Special regard is paid to the diet of guests, who are liberally furnished with good home cooking, etc. Send for further information. Address
ANDERSON & PATRIQUIN,
Anderson's Springs, Lake Co., - via Calistoga, Cal.

Mining and Scientific Press.
THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.
Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.
Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.
The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.
New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.
As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.
Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.
Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

ROOMS TO LET.

Sunny Rooms, FURNISHED or UNFURNISHED en suite, with or without Board.

204 McALLISTER, COR. OF HYDE.

California Inventors Should consult DEWEY & CO., AMERICAN AND FOREIGN PATENT SOLICITORS, for obtaining Patents and Caveats. Established in 1860. Their long experience as journalists and large practice as patent attorneys enables them to offer Pacific Coast inventors far better service than they can obtain elsewhere. Send for free circulars of information. Office of the MINING AND SCIENTIFIC PRESS and PACIFIC RURAL PRESS, No. 252 Market St., S. F. Elevator, 12 Front St.

ELECTRIC CURRENT PRODUCED BY THE ACTION OF LIGHT.—The following account is given of Mr. P. Laur's experiments in relation to the above: A glass vessel is placed in a dark chamber and filled with a solution of 100 parts of water, 15 of common salt and 7 of sulphate of copper. A porous vase filled with mercury is placed in this solution, and two electrodes, one of platinum and another of sulphuret of silver, are inserted, the first into the mercury, the second into a cupric solution. These two electrodes are connected with a galvanometer; the apparatus is placed in the sun and the dark chamber shut. As soon as the circuit is closed the galvanometer needle turns in a direction which shows that the silver sulphuret is positive; when the needle comes to rest the shutter is opened, and the needle is immediately repelled, soon coming to a new position of equilibrium; on closing the shutter again the needle slowly retrogrades toward its first position. When the needle is placed in the open air, if a cloud passes before the sun the movements of the needle show the variations of luminous intensity. The movements are attributed to the reduction of the silver sulphuret by the cupric protochloride, a reduction which takes place only under the action of the sun's rays.

ACID RESISTING CEMENT.—To make a cement for glass that will resist acids: Take 10½ lbs. of pulverized stone and glass, and mix with it 4¾ lbs. of sulphur. Subject the mixture to such a moderate degree of heat that the sulphur melts. Stir until the whole becomes homogeneous, and then run it into molds. When required for use it is to be heated to 248°, at which temperature it melts, and may be employed in the usual manner. It resists the action of acids, never changes in the air, and is not affected in in boiling water. At 230° it is said to be as hard as stone.

THE Trustees of Nevada City have passed an ordinance which requires each laundry establishment in the place to pay a license of $30 a quarter. All the laundries there were carried on by Chinamen. The result of the tax has been, we are told, to make the Mongolian cleaners of clothing quit the town.

A FRESH outbreak against the Jews has occurred at Balta.

DIASTASE IN THE WHITE OF EGGS.—It is well known that malt contains a substance capable of converting starch into sugar, to which the name of diastase has been given. A substance resembling diastase has been discovered in the albumen of the egg by F. Selmi, the original discoverer of ptomaines, or poisonous alkaloids, in dead bodies. Previous to his death, in August, 1881, he wrote the following letter to Ercolani: Various considerations have induced me to assume that egg albumen contained a body that would change starch into sugar. In fact, I found that a filtered aqueous solution of albumen, when digested with a solution of soluble starch, induced this change very rapidly. This confirmed my suspicion, and I attempted to isolate this body from ordinary albumen. This I succeeded in doing by treating the albumen with three parts of water and precipitating the solution with a sufficient quantity of concentrated alcohol. The diastatic substance is in the soluble portion of it, as I was able to prove by experiments, by redissolving the albumen that had been precipitated, and making comparative experiments with that and with the substance that remained in solution after expelling the alcohol at a low temperature. The existence of a diastatic substance in egg albumen is of great physiological importance, which may be stated as follows: The albumen contains glucose, and the yelk of egg contains starch; the latter is changed into sugar when it reaches the albumen, and is thus converted into nourishment.

A NEW THEORY OF THE FORMATION OF COAL.—After a protracted microscopic study of coal, Prof. Reinch has come to the conclusion that coal was not derived from land plants, but chiefly from microscopic forms of "a lower order of protoplasm." He holds that plants of a higher order have contributed but a fraction of the mass of coal veins, however numerous they may have been in some instances. In a recent lecture, stating his conclusion, Prof. Reinsch referred to the fact that Dr. Muck, of Bochum, held that algæ have mainly contributed to the formation of coal, and that marine plants were rarely found in coal, because of their tendency to decompose, and that calcareous remains of mollusks disappeared on account of the rapid formation of carbonic acid during the process of carbonization.

Cigars.

Formation of New Lodges in the A. O. U. W.

EDITORS WATCHMAN :—Permit me, through the medium of your valuable and widely-read paper, to call the attention of subordinate Lodges of the A. O. U. W. to the rumor which prevails at the present time, that certain parties are again in the field, and hard at work for the purpose of forming a new Lodge of the A. O. U. W., in this city. This, in the face of a similar effort which has but recently been defeated by the almost unanimous voice of the Lodges of San Francisco, is an assurance on the part of those who are superintending this job, for which they would deserve the thanks of the whole Order, were it not that for all intents and purposes we have Lodges enough in this city for double the number of members that we now have on our rolls; besides, should they succeed in their efforts, would be an act of great injustice to most of our Lodges, who enjoy but a very limited membership and a proportionate meagre attendance at their meetings. But the main object in creating these new Lodges seems to be the admission of a large number of applicants at greatly reduced and nominal figures, as so called charter members, thereby depriving existing Lodges of that income to their general fund, which an increase of membership would secure to them.

Our noble and beloved Order stands at present foremost in rank and members, far above any other beneficial Order on this coast, and, perhaps, in the world; its foundation rests as solid and secure as the Rock of Gibraltar, and its usefulness will outlive generations to come, hence the priviledge to become one of us, ought to be considered one of the greatest honors that can be bestowed upon men, and should not be figured by dollars and cents. To those who will not join us because they consider our fees too high, let me say : In God's name keep out of our Order and don't urge others in forming new Lodges, whereby you would save a few dollars, which otherwise would help to replenish the almost empty coffers of most Lodges.

To all soreheads and office hunters, who have been disappointed on election day, I give the following advice : Double your good conduct and zeal for the welfare of your several Lodges, and your ambition and efforts to hold office will eventually be crowned with success; don't show the cloven foot by taking your clearance cards, and then follow the reputable business of Lodge builders, which business has of late been a very unprofitable one.

My brothers, if you take the above fully into consideration, I have no fear what your decision will be should your consent be asked for the formation of a new Lodge in this city.

Fraternally Yours,
S. HOFFMAN.

Aurora, No. 13, Nevada.

The following is from a Lodge where they have nothing to write about. However, it makes an excellent substitute:

EDITORS WATCHMAN:—I herewith return list of officers of No. 13, of Nevada. Would be pleased to respond to your invitation as to items, but in Aurora, facts are wandering and fancies are stillborn. In a measure we are prototypes of Lord Macaulay's New Zealander—lost and pondering among ruins of past "rich finds" and antiquated fossils of "flush days." The "hope eternal," etc., of Pope has its last and final abiding home here; but its practical realizations have only the substance of a phantom. Our Lodge membership is now 14, with a chance for additions, but unless the "population boom" comes our way, 30 names on our roll call means "good enough." In sincerity, the tone and ability of your paper is admirable. Its careful perusal infuses the spirit of its teaching into the "sincere of purpose," and its knowledge of our history and daily transactions throughout the Union is a great factor in keeping us in the front rank of modern progressive societies. Had I the facts here to build upon, I would be doubly happy to be enrolled on your regular list of contributors. Man so seldom makes his conditions and the events attending them, that in my case no exception can be noted. With highest regards and the hand of goodfellowship, I am, fraternally,

H. T. TUCKER, Recorder.

Aurora, Esmeralda Co., Nev., July 3, 1882.

BROS DAVENPORT & RICH, wholesale and retail dealers in eggs, fruit, vegetables, butter, cheese, honey, etc., at stalls 13, 14 and 34, Center market, carry a large stock of the best quality of products in their line. Point Reyes butter and ranch eggs are given special attention, as also choice potatoes. Having telephone connection, orders can be given, which will be filled promptly, and at the lowest market rates.

BRO. J. H. CONGDON, formerly with the house of Miller & Co., opened a general produce and commission business at No. 6 Stewart street, a year ago. His is now one of the leading produce and commission houses of this city,

WE met Bro. Frank M. Cohn, Financier of Unity Lodge, No. 25, Oregon, in Valley Lodge, No. 30, on Wednesday evening, July 12th.

THE increase in membership was about 200 for June in this jurisdiction.

"Clear Lake and Calistoga."

The Clear Lake and Calistoga Stage route has become a very popular one for health and pleasure seekers going to the many springs and other resorts in Lake county, and lately the stages to Lakeport have been well filled. Anderson, Harbin, Adams, Howard, Siegler, Gordon, Bartlett, Highland and Pierson springs, Soda Bay, Blue Lakes, Middletown, Lower Lake, Sulphur Banks, Kelseyville, Lakeport, Great Western and Oat Hill and other quicksilver mines are all reached by the popular stage line under the veteran management of W. F. Fisher, whose headquarters are at his Lodi stables, Calistoga. The route from San Francisco to Calistoga is a delightful one, taking the Central Pacific Railroad ferry to Oakland, along the eastern shore of the bay, passing Berkeley, San Pablo, to the Vallejo landing; across the Straits of Carquinez, with fine marine and distant mountain views; passing Vallejo, with Mare Island and its Government works in view; up the valley to Napa; thence pass the thrifty towns of Napa valley and through its rich fields of grain, vines and orchards, bordered on the east side by hills clothed in rich verdure, with a top fringe of evergreen trees, picturesque in the extreme as they face the traveler in bold relief in front of their skyward home. The stage from Calistoga passes a mile or two across the valley and immediately begins the ascent of Mt. St. Helena, and for five miles up to the summit of the ridge, and down the mountain pass a like distance, the scenery is grand and picturesque in qualities rarely equalled or excelled elsewhere. Still farther and higher over Cobb mountain to Clear Lake and Lakeport—and, in fact, throughout most parts of Lake county—the roads abound with grand scenery and delightful views of charming brooks, lakes or meadows.

NEW METHOD OF PIANO TEACHING.—Mr. John Cooper, of this city, has issued a very useful little book, which will be appreciated by all who have ever taught the organ or piano, and will be appreciated also by those who are learning. It is particularly applied to teaching the scales. Each major and minor scale is given in musical signs in the usual way, and under each is a graphic representation of the keyboard so marked as to indicate to the eye the proper notes to be struck in running the scale, and also the fingers to be used for each hand in each note. The diagrams will impart to the young student a correct and practical knowledge in fingering, and facilty of performing. They are based on the knowledge that the young intellect may be reached more easily through the eye than the ear. It is really teaching music by pictorial illustrations, just as other things are taught by illustrations. Each diagram is self-explanatory, and presents to the pupil at a single glance much more information than can be conveyed by many paragraphs of descriptive matter. Each diagram for its respective scale tells which note to begin and finish on, which are the proper sharps or flats for the key under consideration, and also the proper fingering. There is a short introduction on music, the notes, etc. On the diagram round marks indicate naturals; square ones, sharps or flats; figures on the rounds or squares indicate the proper fingering. There could be nothing simpler than this, and it will be a great help, indeed, to both teacher and taught. It is a decided advance step.

AT ANDERSON SPRINGS, Lake county, the season so far has been a very lively one. Several new cottages, added to the place since last season, have been substantially filled with genial and home-like guests. The hotel and its surroundings have also been decidedly improved, making the place more than ever desirable to those who appreciate good home living, unadulterated with worse than useless fictions and fashions. Dr. Anderson, his mother, and several sisters, proprietors of the Springs, give their personal attention to the place. They contemplate further important improvements another season.

THE Standard Soap Co., 204 Sacramento street, under the management of Bro. J. J. Applegate, is one of the industries of California of which we may be proud. The variety, excellence and standard worth of their soaps for toilet or domestic use place them in the very front rank, not only in this State, but of any in the United States. The Standard soap palace, at 637 Market street, is one of the attractions for the ladies. Toilet soap that will cure skin diseases, and soap that will preserve healthy skin, can be procured here, as also that for kitchen, laundry and household use.

BRO. A. P. ADAMS, patentee and manufacturer of pure compressed coffee, 51 Fremont street, corner of Mission, has enlarged his capacity for manufacturing this preparation for making delicious coffee. The demand is increasing largely, and all leading grocers keep "Compressed Coffee" in stock.

THE City Parcel Delivery Co., No. 3 Post, is carried on by Bro. H. C. Dodge and Geo. D. Ross. They are prompt and reliable men, and any business entrusted to their care will be attended to in the best manner.

A Little More Care Needed Somewhere.

EDITORS WATCHMAN:—I have to-day received Assessment Notice No. 11; and while I am not among those who think all the deaths in our Order ought to be charged to the carelessness or ignorance of the Medical Examiner, in order to protect our Order and stimulate our Examiners to greater caution, allow me to call attention to this notice. I do so the more cheerfully because it is generally assumed that nearly, if not quite all the medical wisdom and intelligence of the country resides in San Francisco :

First.—I find on this notice nine deaths, seven of which occurred in San Francisco.

Second.—The second on the list joined the Order January 7, 1882, and died May 15, 1882, *i. e.*, four months and eight days after joining the Order, of "general ascites." Now, I doubt that man's being healthy when examined; nay, more; I venture the assertion that he was not, and could not have been. Then, again, the reported cause of his death is incorrect. There is no such a thing known to the profession as "general ascites." "Ascites" is a collection, or an effusion of fluid within the abdomen. "Ascites" proper is a dropsy of the peritoneum. That is local; hence, it cannot be general.

Third.—No. 69 dies of "tuberculosis." While the philology of this term would justify its use to designate phthisis pulmonalis, custom has not as yet authorized its use. Hence, it is not in Webster, and but few members have access to Dunglison; and even he is not definite, and refers its signification back to "tubercle," which simply means a tumor. Would it not be more satisfactory to the Order at large if brethren making out these death reports would try and talk plain English, and in this particular exercise a little more care? We will say nothing about the consumption, as we in "charity" assume it must have been acute, without any antecedent tendency.

Fourth.—No. 70 dies from "general parises." Now, I will admit you San Francisco people are a wonderful people—so much so that if I could stand your climate I would like to live among you. But do tell us poor, ignorant Stocktonians what "parises" is, especially as it is becoming "general." Is it likely to spread to Stockton? Is it a sequel of smallpox, measles or leprosy? Webster doesn't tell us, Dungleson can't, and Cleveland is silent. Had this poor brother been abroad and returnd with too much "Paris," and the physician, to express this superabundance, added the characteristic "es," as expressive of the fact? True, we have the medical term, "paresis;" but it could not be that, as that is only a slight paralysis, affecting motion, not sensation, and is always incomplete. Brethren, please be more definite. Now, brother, I submit, "general ascites," "tuberculosis," "general parises," "heart disease," and "apoplexy," all on one card, out of nine deaths, don't look well, does it? We need a "little more care" in examination and definition. Let us have it, please.

Yours, in C. H. & P.,
J. A. MILLER, M. D., D. D.

Tribute of Respect.

[IN MEMORIAM.]

NORTH TEMESCAL, June 19, 1882.

At the last meeting of Silver Star Lodge, No. 2., D. of H., A. O. U. W., the following resolutions were adopted:

WHEREAS, God, in his mysterious Providence, has seen fit to sorely afflict our brother, Freeman H. Lewis, by removing, in the first roseate dawn of womanhood, his beloved wife, therefore be it

Resolved, That we, the members of Silver Star Lodge, No. 2, D. of H, A. O. U. W., tender to our bereaved brother our heart-felt sympathy in this, his hour of sorrow. And though we know that words are vain to heal the aching heart, we desire to point him "just across the river," to the eternal home prepared for those who love Him, where there are no partings, and the "weary are at rest."

Resolved, That a copy of this slight token of our respect be sent to our stricken brother, and also be inscribed upon our minutes, and a copy be also sent to the PACIFIC STATES WATCHMAN for publication.

MRS. F. W. BILLINGTON, Secretary.

THE finest selection of new goods in Majolica, fish globe stands, new designs in crockery and glassware, flower baskets and fancy goods, are now displayed in the wholesale and retail store of Messrs. Mangeinheim, Sternheim & Co., 27 and 29 Sutter, and 528 and 530 Market street, below Montgomery. This new line of goods was selected by Mr. Sternheim, on his recent continental visit, and includes all the newest designs and latest paterns. Parties wishing to purchase will do well to examine stock and get prices.

THE California Commercial College, 417 Kearny street, under the supervision of Profs. C. N. Andrews and G. B. Bernard, has taken a position in the front rank of our educational institutions. Each of these gentlemen have had a large experience in several of the leading schools of this State, and personally instruct their pupils. We recommend this model school as one of the best in this State to procure a thorough and reliable business education or a preparatory academic course.

BRO. B. LEZANSKY, wholesale and retail dealer in millinery, 134 Sixth St., has a fine stock of latest styles of hats and bonnets. Having advantages in location and a large experience in this business, enables him to furnish the latest styles and paterns at bedrock prices.

A Rural Commemoration.

One of those pleasant impromptu celebrations, such as occur naturally in the rural districts without much effort on the part of any one in particular, occurred at Anderson's Springs, on the Fourth. Ex-Supervisor Fay acted as President; Father Joseph Gallagher, Chaplain; Captain A. C. Freese, Orator; Dr. Roche, Poet; Miss Sarah O'Donnell lead the audience in singing "America;" Miss Louisa Freese read the "Declaration of Independence" admirably; Miss Beckie O'Donnell gave a popular recitation. Among other sentiments offered was the following, appropriate to the place of celebration:

LAKE COUNTY,
The grandest health and pleasure ground of California. Its hills are the sublimest; its forest "plumage" the handsomest; its crystal lakes and brooks the purest; its atmosphere the clearest; its skies the fairest and bluest; its starry firmament the most prolific and brilliant; and its patriotic sons and daughters the sturdiest pioneers of all our glorious Yankee nation.

A large number of the guests of the Springs, with neighboring citizens, were present, and it was generally conceded that all duties were well performed. Dr. A. Anderson photographed the procession and the audience as assembled. Many enjoyed the afternoon in strutting about the Springs and the fine natural park in the heart of which they are located. A lively country dance closed at 12 P. M., the rare pleasures of the occasion.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

HOW TO STOP THIS PAPER.—It is not a herculean task to stop this paper. Notify the publishers by *letter*. If it comes beyond the time desired, you can depend upon it we do not know that the subscriber wants it stopped. So be sure and send us notice by *letter*.

ANDERSON'S SPRINGS,
LAKE COUNTY, CAL.

Nineteen miles from Calistoga, Napa county. Five miles from Middleton, and ten miles from the GREAT GEYSERS, between which and Anderson Springs, there are good Wagon Roads.

Hot Sulphur and Steam Baths

For the Cure of Rheumatism, Paralysis, St. Vitus' Dance, Dropsy, Etc. Cold Sulphur for Dyspepsia Diseases of the Stomach and Kidneys.

Scenery Unsurpassed. Climate Mild and Equable.

Consumptives generally improved in health, and asthmatics are invariably relieved. Trout Fishing in the grounds. Deer hunting in the immediate vicinity. New Cottages for the better accommodation of guests. Cooking good.

IMPORTANT RECOMMENDATIONS.
Remarkable Cure of Dropsy.

VALLEJO, June, 1882.

I suffered intensely with dropsy, and was induced by Mr. Edgecomb to try Anderson's Springs, he having been cured there, after undergoing frightful agonies, being tapped three times before he reached there; and I am deeply grateful for taking his advice, for such a beneficial effect had the Springs on me, that I am now entirely cured, and advise all who may be suffering to try Anderson's Springs. KATE MACKAY.

Sight Restored.

A candid and well-known gentlemen of San Francisco certifies briefly as follows:

May 31, 1882.

"I was cured of inflammation of the eyes at Anderson's Springs, Lake county." M. J. DURNEY, 425 Brannan St., S. F.

Many other cases of Dropsy and Paralysis, Rheumatism, Swelling of Limbs, and various other obstinate cases of chronic diseases have been cured from year to year, at the above-named Springs, which are located in Lake county, 19 miles from Calistoga. Special regard is paid to the diet of guests, who are liberally furnished with good home cooking, etc Send for further information. Address

ANDERSON & PATRIQUIN.
Anderson's Springs, Lake Co, - via Calistoga, Cal.

A Song of Nature.

By the gurgling stream as it winds along
On its way to the valley below,
It sounds in my ears like a long lost song
Of childhood's sweet day, long ago.

The smooth worn bowlders, like long-lost friends,
Familiar in times long past,
Stand forth to my view and with my vision blends,
And my youth seems again in my grasp.

Like life's blood a dancing through eager young veins,
The water runs rapidly past,
Portraying this life with its joys and pains;
Returning, no, never, alas!

But here, by this stream, is a treasure more rare,
That will heal all diseases and pain,
Even fountains of life-giving water are there,
Not supplied by the winds nor the rain.

But dear mother earth, from her bosom supplies
These springs that were hid from our sight;
They strengthen our heart and open our eyes,
And fill us with youthful delight.

And even the rocks at this wonderful spot
Breathes soft on our bruises and pain,
Their medical vapor, exceedingly hot,
And this bathing is never in vain.

These waters of life and this medical breath,
Are free to the great and the small,
At Anderson's Springs, saving from death
The blind, halt and maimed, one and all.

Unto God be all praise who created the earth
With these blessings so rich unto men,
Who even now slowly are finding their worth,
And do bless him in turn again.

—W. A. CLARK.

SPARKS FROM CAST-IRON GEARS.—In regard to the question whether the friction of cast-iron gears will produce sparks, a subject previously mentioned in our columns, a correspondent of the *American Miller* writes as follows: I once had a pair of miter wheels running in the pit of my burst frame, driving two pair of runners. They were small wheels, some 2 feet in diameter, with about 7 inches face, both of them having the same number of cogs. One of them was on the upright shaft, it not being true on account of its having a coupling off. I took them apart in order to have the toe of the upright shaft worked on, and I forgot to number the cogs. I had been running them some time, and they had worn with shoulders. I kept them well greased; a pretty large pile of grease had accumulated right under the wheels. After having the toe of the shaft repaired, I put them in gear again and started them to work. Having failed to put the cogs in the same places as they were before, it caused them to come in contact with the shoulders, and, the friction being heavy, it caused them to rub or grind out sparks, which set the pile of grease on fire, and would have burned the mill if I had not discovered it in time. I have very little doubt but that a great many mill fires may be traced to the throwing of sparks by gears. There was no possibility of a fire starting in my mill except by these wheels. The insurance companies are laboring under a very great mistake if they think that cast-iron gearing will not produce sparks, and the fact above mentioned should be known among machinists.

ACID IN MACHINE OILS.—One of the simplest and readiest off-hand methods of detecting whether a sample of machine oil contains free acid, is to cover some oxide of copper in a glass with a layer of the oil (coppersmith's ash will answer the purpose. If the oil contains either free, fatty or resinous acid, the cuprous oxide will be attacked, and the oil will show in a short time a distinct green coloration. Gentle heating facilitates this action.

A NOVEL STEAM ENGINE.—A new steam engine, in which the use of steam is economized, and in which a constant equal pressure or strain upon the driving shaft is secured, has recently been patented. The invention is an improvement in the class of steam engines, having more than one movable piston working in the same cylinder, each of which is separately connected by the crank shaft. The cylinder of the engine has three pistons, the rod of the central piston passing through the center of the inner piston. The rods of the outer piston pass through the inner piston, and are secured thereto at equal distances from the rod of the center piston. These rods also pass through, but are not attached to the central piston; and by this construction the movement of this piston is steadied, and it will be seen that the movements of the outer and inner pistons are made synchronous. When steam is admitted through the port between the central and outer pistons, they will be forced apart in opposite directions until the exhaust port allows the escape of the steam, when the steam is admitted between the central and inner pistons, and the central piston will be moved back, the central piston moving in one direction while the end pistons move in the opposite, and as the cranks of the central and end pistons are set opposite, it will be seen that by the movements of the three pistons the crank shaft is at the same moment pushed and pulled in opposite directions, and the strain upon the crank shaft is equal in both directions.

THE SUN'S HEAT.—In a paper read by Dr. C. W. Siemens before the English Royal Society lately, the ground was taken that all the heat and energy sent from the sun find their way back to the great solar center, which thus suffers no diminution of its forces.

COLOR PRINTING.—A European firm has patented a newspaper press which, it is claimed, prints in four or five different colors at the same time. It is somewhat similar to presses used in printing wall paper.

The Pacific Rural Press

[Established in San Francisco in 1870.]

This is the leading farming journal on the western half of the continent, and second to none in America. It is well printed and illustrated, weekly. Contains an unusual amount of fresh, original farm, household and family circle literature. Careful attention is paid to giving full and reliable weekly market reports. The following are among its ably conducted departments: Editorials on agricultural and other timely and important subjects of live interest to farmers and their families; agricultural, and other useful and ornamental illustrations; correspondence from various quarters of our new and rich developing fields of agriculture on the Pacific coast, embracing new hints and ideas from progressive men and women in all branches of rural industry; Horticulture; Floriculture; The Garden; The Home Circle; The Grange; Young Folks; Domestic Economy; Good Health; Entomological; Sheep and Wool; The Dairy; The Stock Yard; Poultry Yard; The Swine Yard; The Apiary; The Vineyard; Queries and Replies; New Inventions (and illustrations of new and improved machinery); Agricultural Notes; Items of General News, etc. Its columns are studiously filled with chaste, interesting, fresh and useful reading, devoid of questionable literature for old or young and fancifully alluring clap-trap advertisements. Send for sample copies.

Subscriptions, *in advance*, $3 a year. Agents wanted, on liberal pay. DEWEY & Co., Publishers.

No. 252 Market St., S. F., Cal.

"Water Hammer" Action in Earthquakes.

In a recent paper on the causes of volcanic action, Prof. Prestwich assumes the existence of hot reservoirs or cavities filled with molten rock, and cold reservoirs or cavities, nearer the surface, filled with water; and he supposes the shrinkage of the earth to squeeze up the molten rock till it meets with the water, which then explodes, producing a volcano.

Mr. Thomas Mudd suggests, in the *Geological Magazine*, that the conditions described by Professor Prestwich must give rise to the "water hammer" action familiar to engineers. Water hammer action manifests itself where steam has to be conveyed to considerable distances from its source without any return communication or easy vent. It occurs in this way: The steam, on being turned into the cold pipes, is quickly condensed, and in a short time a quantity of water is formed. The steam condensing most quickly at the end furthest from the inlet, there is there formed a partial vacuum. The steam, rushing forward in consequence, gathers up the water into a plug, which fills the sectional area of the pipe, and forms, indeed, a water piston. This water piston is dashed by the force of the steam against the end of the pipe, producing a severe shock, accompanied by a loud report; and then follows, by natural sequence, a rebound, which must be a rebound of a compound character, made up in part of the rebound of the steam, in part of the rebound of the water, and in part of the effort of the water to regain its level by gravity. The first two are probably of momentary existence, but the last takes time, and proceeds with a measured swing like a mighty pendulum. When the force of the return wave is spent, and the steam again gets the advantage, condensation having in the meantime been going on behind the return wave, this piston of water advances a second time, and is dashed with increased fury against the obstruction in the pipe. This action, in a few strokes, arrives at its maximum, and thence, if the pipe has been able to withstand the shocks, gradually diminishes and dies away.

ABOUT 20 female copyists at the Navy Department, Washington, have been dropped from the rolls on account of the failure of Congress to provide for their payment.

Absorption of Metallic Oxides by Plants.

Prof. F. C. Philips recently read an interesting paper before the Engineers' Society of Western Pennsylvania, treating upon the absorption of metallic oxides by plants. The paper contained the history of what is known and thought about the effect of metallurgical works on adjacent vegetation, and the influence of poisonous oxides in the soil. A summary of experiments was added, made upon a great number of young plants, with the object of determining whether any injurious effects are produced upon them by being grown in soil impregnated with certain metallic oxides, and whether plants in a perfectly healthy condition will absorb such oxides through their roots.

The following conclusions were arrived at: 1. That healthy plants, grown under favorable circumstances, may absorb through their roots small quantities of lead, zinc, copper and arsenic. 2. That the lead and zinc may enter the tissues in this way without causing any disturbance in the growth, nutrition and functions of the plant. 3. That compounds of copper and arsenic exert a distinctly poisonous influence, tending, when present in large quantities, to check the formation of roots, and resulting in the ultimate destruction of the plant, or in the reduction of its vitality to such an extent as to interfere with the nutrition and growth. In the case of the heavy metals, copper, zinc, arsenic and lead, it seems to be probable that their oxides may, under certain circumstances, become deposited in the tissues of the plant.

PRESSURES IN BOILERS AT SEA.—There seems to be no limit at the present time to the increased pressures used in boilers at sea. It is said that a new steamer building for the French government is to be fitted with engines intended to utilize a working pressure of 142 lbs. per square inch. They are expected to indicate 3,800-horse power. The boilers to supply steam are of a pattern which has already been tried in a government dispatch boat, and it seems that they are entirely satisfactory after several years of use. It is expected that these boilers will be able to furnish steam for the engines without forced draft.

THE crop of oranges and lemons in the south country this year will be an immense one.

EXCURSION
TO ALASKA.

The August trip of the Steamship IDAHO to Alaska will be made a special feature of interest for tourists and pleasure seekers. In addition to her regular ports of call (Wrangel, Sitka, Harrisburg, etc.) it is intended she shall visit Glacier Bay and other points of special interest.

The trip from Puget Sound to Alaska, instead of being, as many imagine, rough and tempestuous, is made nearly the whole distance on inland waters, which are as smooth and unruffled as a mountain lake. The scenery is a magnificent panorama of wondrous grandeur. The noted and celebrated points of interest in California and other States dwarf into insignificance in comparison with the wonderful sights and towering mountains in this wonderland of glaciers, icebergs, Aurora Borealis and nightless day. Only a limited number of passengers can be taken from San Francisco, as a large number of tourists have engaged to go from Portland, Victoria and other northern ports.

Those desiring to engage passage will please register their names at the Company's Ticket Office, 214 Montgomery street. No name accepted unless accompanied by a deposit of $20 on account.

The fare for the round trip has been fixed at a low rate of $115, which includes meals and a berth.

Passengers will take the DAKOTA, which leaves Broadway Wharf July 29th, at 2 P M., and transfer to the IDAHO at Port Townsend about August 3d, reaching San Francisco on the return about August 25th.

DEER HUNTING IN THE MOUNTAINS—A DEAD SHOT AT THE LEADER.

Home Miscellany.

The Child and the Judge.

Written for the RURAL PRESS by M. W.

A bright little boy, with ragged clothes,
And shoes that scarce kept out the snows,
Approached the judge in his high-backed chair,
And, bashful, paused a moment there.

"Judge, your honor," he said with a sigh,
As he slowly raised his childish eyes,
"I haven't done nothing that's wrong, I vow,
I always tried to be good, but now

"I want to give myself up like a thief,
Because, I think, 'twill be a relief,
For I don't want to live, as the rest, in the street,
And learn to swear, to lie and to cheat.

"No sir, my mother and father are dead;
They died when I was a babe, it is said,
So I live with my aunt, who drinks a great deal,
And beats me because I will not steal.

"To-day she drove me away from the door,
And told me never to come back more;
And now nobody 'll take me in,
Because my clothes is ragged and thin.

"I can't get work, and I've nothing to eat,
Unless I beg it, or steal in the street;
Isn't there a place where I can go,
Where they'll treat me kindly and I can grow

"To be a good, a great and learned man?
Oh! please, Judge, send me there if you can."
The Judge removes his tear-dimmed glasses,
While o'er his eyes his hand he passes.

"I will see, my boy," he kindly said,
"That you want not for learning nor bread,
'Tis a cold, hard world, but there's room for you,
There's work for honest hands and true."

July 11, 1882.

Circumstantial Evidence.

Mr. Pritchard lifted him out of the wagon and set him down on the door-step. What a little fellow he was, and what a wondering, pleased look there was in his eyes! He had on coarse shoes, a check apron, and his pretty brown hair was cropped close under the shabby cap. It was almost too cold a day for such a little fellow to be out without a coat. Mrs. Pritchard took him by the hand to lead him in, and the little hand clung confidingly to hers.

"What's your name, dear?" she asked, pleasantly.

"Tommy Bobbitt," he answered, readily. "Am I going to stay here?"

"Folks all dead," said Mr. Pritchard. "Mother went a month or so back. I told them over to the county house we'd take him and try him; and if he suited, we'd keep him and do well by him. We don't know what kind of stock he is yet; but if I find any mean, dishonest tricks in him, back he goes. We don't want to adopt a boy and set by him, and have him sting us like a serpent in our old age."

"Oh! I know Tommy will be a nice little boy," said the wife, kindly.

The Pritchards were farming people and well-to-do. They had never had a child of their own, and, after much consideration, had decided to adopt a boy when a suitable one could be found. Word reached them that a child four years old had recently been left upon the town, and Mr. Pritchard, on driving over to see about it, had brought the little fellow home on trial.

Nobody knew how dreary and forlorn a life it had been in the county house for a little four-year-old boy, suddenly left friendless. He had wandered, shivering, in the yard, sometimes picking up here and there a red leaf to play with. He had hung around in the big, cheerless room, where a few decrepit old women sat, because in the men's room there was a loutish, half-witted fellow, who frightened him. Nights he slept with a dreadful boy, years older than himself, who said things to scare him, and who pulled all the bed-clothes away and kicked in his sleep. And nobody knew how his little heart had ached for the dear mother, who, though very poor and unfortunate, had sheltered him to the last.

But now, in his warm new home, he had brightened into a rosy, pretty boy. He had new shoes and stockings, and Mrs. Pritchard made him the little coat, with a motherly instinct growing in her heart with every stitch. He learned the different rooms, and ran about them fearlessly; he made funny little speeches; he jumped and laughed like other happy boys, and climbed boldly upon farmer Pritchard's knee when that good man sat down to take his ease after supper.

"He's got meat in him," said the farmer, nodding approvingly; "but I don't know whether he's honest yet. That's the thing, to my mind."

Tommy had been there a week—had one week of sunshine—when the black cloud came down upon him.

Farmer Pritchard had a cough, which was apt to trouble him at night, and on the bureau near the head of his bed he kept a few gum-drops, which he could reach out and get to soothe his throat when the coughing came on. One afternoon, chancing to go into the bedroom, his eye fell upon the little paper bag, and he saw there was not a single gum-drop there.

"That rogue, Tommy, has been here," he said to himself. "I know there were 5 or 6 when I went to bed last night, and, for a wonder, I did not have to take a single one. Tommy! Tommy! Look here! Have you been getting my gum-drops?"

Tommy, who was playing in the door-yard, looked up brightly, and said: "No, I did not get any."

"Did you take them, Lucy?" asked the farmer, turning to his wife.

Mrs. Pritchard had not touched them, and her heart sank as she said so; for who was there left to do so but little Tommy? Her husband's face grew grave.

"Tommy," he said, "you need not be afraid to tell the truth. Didn't you take the gum-drops?"

"No, I didn't," replied Tommy, readily.

"Oh, yes, you did, Tommy. Now tell the truth."

"No, I didn't."

"This is bad, very bad, indeed," said Mr. Pritchard, sternly. "This is what I have been afraid of."

"O, Tommy," pleaded Mrs. Pritchard, "if you took them, do say so."

"If he took them!" repeated her husband. "Why, it is as clear as daylight. He has been running in and out of the room all the morning."

But Tommy still denied the deed, though the farmer commanded and his wife implored. But Mr. Pritchard's face grew ominous.

"I'll give you till noon to tell the truth," he said, "and then, if you don't confess—why, I'll have nothing to do with a boy that lies. We'll ride back to the poor-house this very afternoon."

"O, Joseph," said Mrs. Pritchard, following her husband into the entry, "he is so little! Give him one more trial."

"Lucy," he said, firmly, "when a youngster can tell a falsehood like that with so calm a face, he is ready to tell them by the dozen. I tell you its in the blood. I'll have nothing to do with a boy that lies. Perhaps the fear of going back may bring him to his senses."

He went out to his work and Mrs. Pritchard returned to Tommy and talked with him a long time, very kindly and persuasively, but all to no effect. He replied as often as she asked him, that he had not touched the gum drops. At last she gave it up, and with sad misgivings resumed her occupations; while Tommy went to playing with the cat upon the floor.

At noon, Farmer Pritchard came into the house and had dinner. After dinner he called Tommy to him.

"Tommy," he asked, "did you take the gum-drops?"

"No; I didn't," said Tommy.

"Very well," said the farmer, "my horse is harnessed. Lucy, put the boy's cap on. I shall carry him back to the poor-house because he will not tell the truth."

"Why, I don't want to go back," said Tommy very soberly.

But still he denied taking the gum-drops. Mr. Pritchard told his wife to get the boy ready. She cried as she brought out his little warm coat and cap and put them on him. But Tommy did not cry. He felt that an injustice had been done him, and he knit his baby brow and held his little lips tight. The horse was brought around; Mr. Pritchard came in for the boy. I think he believed up to the last moment that Tommy would confess, but the little fellow stood steadfast.

He was lifted into the wagon. Such a little boy he looked as they drove away. The wind blew cold, and he had to hold on to his cap. Nothing was said as they drove along, though Farmer Pritchard really felt a little sorry that he had gone so far. But Tommy had no hope to bear him up. He only knew that all the happy life of the past few days was over—snatched from him suddenly. He thought of the cold, forlorn house to which he was returning, and shuddered. The helpless old women, the jeering boys, the nights of terror; all these he thought of, when, with pale face and blue lips, he was taken from the wagon and sent up to the house. Farmer Pritchard watched him as he went up the steps, all slow, forlorn little boy. He went in. The matron came out for an explanation. It was given, and the farmer drove away.

He drove home. It was not a pleasant ride. He missed his little companion; but he reasoned obdurately with himself, that he had done all for the best. His wife met him tenderly at the door. The kitchen looked lonely as they went into it together. A top lay in one corner, a primer was on the footstool. Mrs. Pritchard put them out of sight. The farmer laid a fresh lot of gum-drops on his bureau at night, and thought grimly that these were safe. He retired early, not knowing what else to do; but his sleep was broken.

Mrs. Pritchard could not sleep at all. The tears stole through her closed eyelids long after the candle was put out and the house still. She was thinking of the poor little boy, even then, perhaps, cowering in his cold bed with terror.

Suddenly a curious, small sound attracted her attention. It was repeated again and again, and now and then there was a tiny rustle of paper. The sound came from the bureau. She listened intently, and her heart beat loud with excitement. She knew that sound well.

"Joseph!" she whispered. "Joseph!"

"What, Lucy," said her husband, in a voice that sounded as if he, too, had been lying awake.

"Do you hear that noise, Joseph? It's mice!"

"I know it. What of it?"

It's mice, Joseph, and they're after your gum-drops."

"Good gracious, Lucy!" groaned Farmer Pritchard upon his pillow. It flashed upon him instantly. He, and not Tommy, was the sinner. The noise stopped. The little depredators were frightened, but soon began again; and a rare feast they made of it.

It seemed as if that night would never end. The farmer heard every hour the clock struck, and at five he got up and made a fire in the kitchen. His wife arose at the same time and began to get breakfast.

"I won't wait for breakfast," he said. "You can have it hot and ready when we get back. I'll harness up and start now, so as to get over there by dawn."

In a few moments the wheels rolled noiselessly over the frozen ground out on the road, and away drove Mr. Pritchard in the morning starlight.

Mrs. Pritchard brought out the top and the primer again, and made the kitchen look its very cheerfulest. Then she got breakfast. She baked potatoes, and broiled a chicken, and made fritters. She put the nicest syrup on the table, and a plate of jelly tarts. She laid Tommy's plate and fork in their place, and set up his chair. The sun had risen, and the bright beams fell across the table. She went to the door and looked up the road.

Yes, they are coming! They drove into the yard; they stopped at the door; and the wondering, smiling little Tommy was lifted down into Mrs. Pritchard's eager arms. She held him very tight.

"Oh! my lamb! my blessing!" she murmured, woman-like.

"Come, let's have breakfast now," said the farmer cheerfully. "This little chap's hungry. He's our own little boy now, Lucy. He's never going from us again."—*Selected.*

Help for the Helpless.

The Boys' and Girls' Aid Society, which meets at 68 Clementina street, San Francisco, closed its eighth year of service in June, 1882. The aim of the society is to aid boys and girls in every possible way; to rescue homeless, neglected, or abused children. It provides in its own quarters temporarily for such, furnishes homes and employment, maintains reading-rooms, a library, a gymnasium, classes for instruction, lectures and entertainment, and encourages industry, frugality and the saving of earnings among its boys and girls.

In a letter from the Superintendent, Edmond T. Dooley, of July 15th, he states that since May 1st, more than a score have been rescued directly from the courts and the prisons, and twice as many beside have been started on more hopeful careers. Certainly, if the good results of the society for six weeks are such as this, it should receive practical encouragement.

For the coming year, there is to be a new departure, which is outlined in the superintendent's address. It is, to supplant, as far as possible, the institutional methods of dealing with juvenile delinquents by family care and discipline. Normal development in the child can only be effected by the family circle. This work, stated in a general way, is, in a peculiar sense, to oppose true home life to that of the street, institution, and every other sort of existence, in rescuing the wayward and neglected, and encouraging the lowly who are struggling, among the boys and girls, wherever they can be reached.

Boys and girls who must work for a living, should be given the advantages of the swimming baths, the library, reading-rooms and gymnasium. They should also be taught the value of money and encouraged in saving their earnings, and should be given talks on every-day subjects of practical importance to them. A sewing-school should be organized, for which additional teachers will be needed. A school for instruction in cooking would also be of value. The superintendent states that boys who are employed during the day can be lodged for about ten cents per night, and given all the privileges of the society. A competent lady has volunteered to take charge of a singing-school, which is to be started during the present month. There are a number of children on hand for adoption, and many needing employment or homes, without legal adoption. Ladies and gentlemen who will volunteer to be correspondents of the society are needed in every district; persons who would give information in regard to applicants for children and through whom children placed in their vicinity, or children in distress, might appeal to the society. Funds are always needed for the progress of the good work, and donations of clothing for both sexes will further the noble undertaking.

Mother.

What a world of love is shown in that one word! How lightly we look upon that loving care with which she guides our erring feet and watches, with feeling, which none but a mother can know, the expansion of our youth to years of discretion! How little do we, in the youthful sound of pleasure and folly, heed her wise advice! We may not think of it in youth, but it will be recalled to us in after years, when the dark grave has placed her beyond our reach and we hear her gentle voice no more. How deeply, then, we regret the many deeds we have done, contrary to her loving advice! How we long for her back again, that we may do over what we have done amiss! But, alas! when once gone, we can never call her back, and our hearts become sad with the mournful reflection.

THE majority for the prohibition amendment in Iowa was 29,751; total number of votes cast, 281,381.

FRANCE will join with England in protecting the Suez canal.

The Nervous Economy in Man and Insects.

Mr. Grant Allen writes in *Knowledge* that the nerves (worth mentioning) in the human body which are not under the control of the brain are those of the heart and other internal organs; and over these parts, as everybody knows, we have not any voluntary power. But all our limbs and muscles are moved in accordance with impulses sent down from the brain, so that, for example, when I have made up my mind to send a telegram to a friend, my legs take me duly to the telegraph office, my hand writes the proper message, and my tongue undertakes the necessary arrangements with the clerk. But, in the insect's body there is no such regular subordination of all the parts composing the nervous system to a single central organ or head office. The largest knot of nerve matter, it is true, is generally to be found in the neighborhood of the sense organs, and it receives direct nerve bundles from the eyes, antannæ, mouth, and other chief adjacent parts; but the wings and legs are moved by separate knots of nerve cells, connected by a sort of spinal cord with the head, but capable of acting quite independently on their own account.

Thus, if we cut off a wasp's head and stick it on a needle in front of some sugar and water, the mouth will greedily begin to eat the sweet syrup, apparently unconscious of the fact that it has lost its stomach, and that the food is quietly dropping out of the gullet at the other end as fast as it is swallowed. So, too, if we decapitate that queer Mediterranean insect, the praying mantis, the headless body will still stand catching flies with outstretched arms, and fumbling about for its mouth, when it has caught one, evidently much surprised to find that its head is unaccountably missing. In fact, whatever may be the case with man, the insect, at least, is really a conscious automation. It sees or smells food, and it is at once impelled by its nervous constitution to eat it. It receives a sense-impression from the bright hue of a flower, and it is irresistibly attracted toward it, as the moth is to the candle. It has no power of deliberation, no ability even to move its own limbs in unaccustomed manners. Its whole life is governed for it by its fixed nervous constitution, and by the stimulations it receives from outside. And so, though the world probably appears much the same to the beetle as to us, the nature of its life is very different. It acts like a piece of clockwork mechanism, wound up to perform a certain number of fixed movements, and incapable of ever going beyond the narrow circle for which it is designed.

Restoring Engravings.

It is a great mistake to bleach an old engraving with chloride of lime and oxalic acid, or either one of these chemicals, as has been done. If such powerful bleaching agents are employed, they should be used very cautiously, as will be indicated further on. The "old" appearance of an engraving is one of the things that it should possess, and it is bad taste to attempt to rejuvinate it to make it appear like a new print. The only treatment that an old engraving should receive is a careful washing in pure cold water. This, if properly done, will remove from the print all that ought to be removed—dirt, dust, fly specks, and the like. To do this properly, a piece of ordinary mosquito-netting should be taken, large enough to accommodate the print, and the ends stitched over so as to allow of the insertion of a stick of wood (a section of a broomstick will answer), to serve as a convenient holder. The print should be laid flat on this, immersed in a bath of clean water, and from time to time moved to and fro under a gentle stream of water directed upon the soiled places. The mosquito-netting will serve to support the paper and prevent its tearing. If left long enough in the water, and carefully handled in the manner described, the dirt, dust and specks will be found to be very effectually removed, and the print very much improved in appearance. If the paper is much defaced with yellowish or brownish spots—a characteristic which is very common to old English prints—it may be advantageous to apply chloride of lime carefully with a camel's-hair pencil to one spot after another, watching its effect closely, and washing off immediately in a stream of water; and thus pencil out the spots until the paper has a uniform tint, commencing at the unimportant places to get into the right way of doing it, and working cautiously up to the important places. This, however, is only a suggestion. If former treatment has injured the surface of the paper, which is very likely, it may perhaps be improved by going over its surface with a very dilute starch solution, and afterwards calendering the paper by passing through a copper-plate printer's press, which may restore the surface and give the print a more lustrous appearance. But this we will not vouch for, and only offer it as a suggestion. —*Manufacturer and Builder.*

LUMINOUS PHOTOGRAPHS.—A film is made of perchloride of iron and tartaric acid on a surface of softened glass; when it has been exposed, sulphide of calcium, rubbed to a very fine powder through a sieve, is dusted over it. The image is formed in the same way as if it had been dusted with any other powder, and it can then be transferred to paper.

MELANCTHON.

Blanks.

[Fill the blanks with words alike in pronunciation, but unlike in spelling and meaning.]

1. He said the ——— would not ——— well.
2. Thomas poured the contents of the small ——— upon the ———.
3. The ——— rode all ——— without stopping for rest.
4. The driver said he would ——— certain legends of the place when they came in ——— of the ——— of the destroyed house.

JERRY.

Metagram.

First, I am an article of food; curtail me and I am a coin; curtail again and I am an adverb; next behead me and there is nothing left.

AUNT SARAH.

Hidden Double-Word Square.

1. I have news for all, whether good or bad.
2. What a great ado men often make about the most trivial matters.
3. Come, Nellie, are you amenable to the law or not?
4. A barren tract was all the eye could see, with here and there a dwarfed bush or tree struggling for existence on the sterile soil.

Hidden in the above are words containing the following significations, in the form of a word square:

Across.—1. Verbal. 2. A cupola. 3. A sign. 4. House-hire.

Downward.—1. A scent. 2. An ancient empire. 3. A devotional term. 4. A quadragesimal fast.

NETTIE.

Answers to Last Puzzles.

NUMERICAL ENIGMA.—The fourth of July.

SYNCOPATIONS.—1. Axle, ale. 2. Warn, wan. 3. Main, man. 4. Pray, pay. 5. Wear, war. 6. Braid, brad.

WORD SQUARE.—
I O T A
O P E N
T E S T
A N T S

DECAPITATIONS.—1. Neat, eat. 2. Fire, ire. 3. Know, now.

TOWNS.—1. At-hens. 2. Or-o-no. 3. New-port. 4. Mad-i-son. 5. Act-on.

A Sunny Day.

EDITORS PRESS:—Seeing in your paper a poem written by a girl of 14 years, I thought I would send you one as well, though it is not nearly so good as her's:

Come out, for the sun is shining,
Why should thy heart be sad?
Why sit in the house repining?
Come out in the sun and be glad.
Birds are singing,
Flowers are springing,
And all things seem to say
"Away with thy tears
And foolish fears,
Come out in the sun and be gay."

Come out, soft breezes are blowing
From the not far distant sea;
Near by a streamlet is flowing,
Come sit on its banks with me.
Its murmuring song,
As it hurries along,
Shall charm away our fears;
And as it glideth slow,
With music low,
It shall carry away our tears.

Thus the stream of life is flowing,
Carrying our sorrows into the past;
They float away without our knowing,
Till, beyond our reach, they seem joys at last.
But the sun is shining
And all repining;
Before it fades away
We will leave all sorrow
Until to morrow
And be merry and glad to-day.

"Gem's" poem is better than this, I am sure.

PHYLLIS, aged 14 years.

Santa Cruz.

Zoological.

N. C. relates: The two Mott boys had recently purchased a new "bull dog," and were out hunting with him. The dog found and attacked a skunk, and, as is usual in such cases, received a liberal showering. When the boys came up to where he was, they found him rolling himself on the ground and in the dust, in vain endeavors to rid himself of the unwholesome odor, whereupon one of the boys, observing his distress, burst forth laughing at him. This so enraged "Bull" that he was about to make the young man understand it was no laughing matter, and it was with much difficulty that he was induced to desist.

P. C. relates that he was in the barn after dark, working among his horses, when it happened that, the barn being alive with rats, one of the horses stepped on one of the rats, and it began to squeal. No sooner did this occur than he was surrounded by a thousand of the infuriated pests, coming to the rescue of their distressed comrade, and obliged to beat a hasty retreat.

D. relates: Having seen what at first appeared to him to be a snake with two tails, but on being disturbed, the anomaly dispersed in two different directions. It proved to be one snake swallowing another. The process had almost been concluded when they were disturbed. The snake which had been swallowed seemed to be as lively as usual afterwards.

The bite of a skunk is said to be as poisonous as that of a rattlesnake.

It is said that rats may be driven away from a place by tying a string about the neck of one.

Household Hints

Emery Paper.

In applying the emery paper for very fine work use at first No. 1 paper both along and across the work, and repeat the process with No. 0, No. 00, No. 000, or No. 0000, according to the polish required, bearing in mind that the more the emery cloth or paper has been used the finer is the polish it will give, the reason being that it becomes coated with a glazed surface, composed of particles of the metal it has been rubbing; and all metals polish finer and brighter with such a surface than with any other. If the above grades of emery cloth or paper cannot be readily obtained, take the finest grade at hand, and wear it down by using it on a rod or piece of metal in a lathe at a high speed, wiping the rod once during the latter part of the operation with a piece of rag or waste, slightly oiled, which will cause the oil to pass to the emery paper, and the latter to retain the particles of metal upon its surface. If this method of polishing be carefully executed, the work may be kept very true and even, and possess a finer finish and polish than by applying oil-stone or by any other known method.

Before commencing any piece of work, measure it all over; and if it has a rectangular part, apply the square to it so as to be assured, before any work has been done to it, that it will clean up to the required dimensions.

JENNY LIND CAKE.—One pound of pulverized sugar, one pound flour, seven ounces butter, five eggs, one teacup sweet milk, one even teaspoon soda, three of cream of tartar. Stir butter and sugar to a cream, then add the yelks of the eggs well beaten, next the milk, and then the flour in which the cream of tartar has been sifted; after this the whites of the eggs, beaten to a stiff froth, and last the soda, dissolved in a teaspoon of cold water. Three even teaspoons of baking powder may be used in place of the soda and cream of tartar, and should be sifted in the flour. This recipe makes excellent layer cakes, and will make two loaves of nice cake. For a chocolate cake make an icing not quite as thick as plain icing. Flavor with vanilla and stir in grated chocolate.

OLD-FASHIONED LOAF CAKE.—Take three quarts of sifted (and well-heaped) flour, a pint of soft butter, one quart of sugar, five gills of new milk, half a pint of yeast, three eggs, two pounds of raisins, a teaspoonful of soda, a gill of brandy or wine, two teaspoons cinnamon and two of nutmeg. Scald the milk, cool to blood-warm, add the yeast, then the flour, to which all the butter and half the sugar have been added; then mix together and let rise until light. It is better to set this spunge over night, and in the mourning add the ingredients (flour and raisins) and let rise again. When light, fill the baking pans and let it rise again. Bake in a moderate oven. This recipe makes three large loaves, and is a standard, economical loaf cake.

TO KEEP NAILS FROM RUSTING.—When nails are used in a position in which they are greatly subjected to air and moisture, it will always pay to prepare them in such a manner that they will not easily rust. This may be accomplished without any difficulty by heating a quantity of nails on a shovel, and throwing them, while hot, into a vessel containing coarse oil or melted grease. The nails should be so hot that the grease will be made to smoke freely. Cut nails prepared in this manner are improved in every respect. They are rendered tougher, and they will outlast any kind of wood, even though buried in the ground, while unprepared nails are completely destroyed in a very short time.

BREWIS.—Take stale bread and break or cut into small pieces; put a quart of the pieces into a frying-pan; pour over it one pint of fresh milk, and cover light; put on the stove for about 10 minutes, when it is not too hot, then remove the cover and break in one egg; add a piece of butter the size of a nut, a little salt and pepper; stir with a fork for a minute or two, and serve. This, with scrambled or poached eggs, makes a nice dish for breakfast.

HATTIE'S LOAF CAKE.—Two cups of sugar, one cup of butter, three and a half cups of flour, one scant cup of sweet milk, five eggs, one heaping teaspoonful of baking powder; beat the whites of two eggs to a stiff froth, add half a cup of pulverized sugar, six tablespoonfuls of grated chocolate, two teaspoonfuls of vanilla. After putting this on the top of the cake, set it in the oven to harden.

OX-TAIL SOUP.—Take two tails, wash and put into a kettle with about one gallon of cold water and a little salt. Skim off the broth. When the meat is well cooked, take out the bones and add a little onion, carrot and tomatoes. It is better made the day before using, so that the fat can be taken from the top. Add vegetables next day, and boil an hour and a half longer.

Health Column.

The Removal of Scars and Cicatrices.

The *Journal of Pharmacy* furnishes from good sources the following hints on this topic: The cicatrices, scars, or marks left by various diseases, burns, or wounds of divers kinds, are often less obstinately permanent than is generally supposed; and from some facts which have lately come under our notice, we are inclined to think that their prevention or removal in many cases may be accomplished by some mild but effectual antiseptic.

Among the exemplifications of the efficacy of the formula we are enabled to lay before our readers is the case of a gentleman of our acquaintance, whose face was so severely burned by the violent spurting of a quantity of melted lead (owing to a workman having incautiously dropped a wet pipe into it), that his eyes were only saved by pebble spectacles from utter destruction.

At first, of course, carron oil was the sole application; and, as for weeks afterward particles of the granulated metal had literally to be dug out of the flesh, a deeply-scarred countenance was naturally predicted by all, except the patient himself. One mark, of an almost imperceptible character, alone remained after the expiration of 6 months, owing, as our friend says, to the whole face being bathed 2 or 3 times a day, as soon as the oil treatment could be discontinued, with a lotion of the simplest character, as is seen by glancing at its constituents.

Lint soaked in the same solution, and allowed to remain on some little time, will frequently mitigate the visible results of small-pox, and we have known one case of ringworm treated in this way to leave no scar whatever, while a sister of the latter patient, who had had the same disease in a lesser degree, but had not employed this lotion, still retains the evidences of the fact. The following is a convenient formula for a wash: Borax, ½ ounce; salicylic acid, 12 grains; glycerine, 3 drachms; rose water, 6 ounces.

Rare-done Meat Injurious.

There are no indications that the mania for undercooked beefsteaks is on the decline; in restaurants only such are served. This refers to robust people, but weakly persons continue to patronize pounded raw chops and steaks, and the juice of uncooked meat. M. Toussaint exposes the grave dangers of patronizing such a dietary, as, if the meat is unsound, the germs of disease will inevitably pass into the system. He states no contagious malady possesses greater virulence than tubercular affections, or consumption, and that is the form of the disease most to be encountered in meat sent to the market. In the slaughter-houses, an ox, etc., is not rejected as unfit for food, unless the lung be entirely affected, but gray granulations may still exist and produce infection.

M. Toussaint took the lung of a cow not very much affected with consumption; he placed it under a press and collected the juice; he inoculated rabbits and young pigs with the liquid as it came from the press, and after he had heated another portion to 114° Fahr., the result was, all the subjects died within a very short period. He extracted the juice in the same manner from the thigh of a pig, dead from consumption, previously cooking the flesh, to correspond with that served in hotels, etc., according to the latest fashion. Then he inoculated rabbits with such grilled juice, and they invariably died of consumption. There are cases where the consumption of raw meat is necessary; here duty suggests to ascertain well the origin of such meat; in all other cases it is prudent to only eat meats suitably cooked; that is, meat whose interior has been acted upon by a temperature of 150° or 160°.—*Kansas City Science Review.*

LOSS OF MEMORY BY THE AGED.—Mr. Winthrop has his mental faculties in full vigor. His Yorktown oration will be remembered as a proof of this. We have had two notable examples of the decay of memory in great men in the case of Mr. Adams and Mr. Emerson. There is a complete blank in Mr. Adams' mind often as regards the more immediate past, which made him an easy prey to the scoundrel who has just had five years' sentence in the State prison for swindling him. Mr. Emerson's lack of memory took another form. He could not remember the names, either of persons or things, when he undertook to converse; but this did not involve an incapacity for ordinary reasoning. There is a pleasant story showing that something of the element of humor remained with him during his time of difficulty in this respect. He was going out one day, and his daughter saw him searching for something to take with him. He could not name it. She mentioned two or three articles, to which he returned a negative. At length he turned to her with a twinkle in his eye, and said, "It is the thing that people take away." She at once brought him his umbrella, and all was right. Mr. Holmes, who is two years past 70, was asked the other day if he had this trouble about remembering. He replied, not at all, except possibly in the case of persons. This statement may readily be credited when it is remembered that he is active as a lecturer before the Massachusetts Medical College, and gives no less than 70 lectures in a season to his students.

Worth Knowing.

PHOTOGRAPHY AT THE BOTTOM OF THE SEA.—Dr. Neumayer has recently exhibited before the Berlin Geographical Society a photographic apparatus designed for the determination of the temperature of the currents at great depths in the ocean. The invention is composed of a copper box, hermetically sealed and furnished with an exterior appendex, made like a rudder. In the interior is a mercury thermometer and a compass, each enclosed in a glass receptacle, in which are admitted traces of nitrogen gas. A small electric battery completes the apparatus. When the latter is allowed to descend attached to a sounding line, the action of the current on its rudder causes it to assume a parallel direction, thus indicating the set of the flow by the relative position of compass, needle and rudder. The thermometer, of course, shows the surrounding temperature. In order to fix these indications, a piece of photographic paper is suitably disposed near the glass cases containing the instruments. Then, at the proper time, a current of electricity is established through the gas in the receptacles, causing an intense violent fight, capable of acting chemically upon the paper for a sufficient length of time to allow of the photography thereon of the shadows of the compass needle and of the mercury column. Within three minutes, it is said, the operation is complete, when the apparatus is hoisted and the paper removed.

ELECTRIC LIGHTS IN SEA FISHING.—A French paper reports a trial by government permission of an electric lure for sea fish. It consists of an electric light in a glass globe with a device for sinking it to the desired depth. As soon as the light is turned on the sea in its vicinity is illuminated brilliantly, and the fish, over whom light is well known to exercise an irresistible influence at night, come eagerly, and sometimes in large schools, within the rays. They may be seen from above disporting themselves in the unaccustomed brightness, and little dreaming of the sinister purpose with which the little fete is organized for them. It is then that other fishing boats, armed with nets, come up and set to work at the unconscious victims, which they surround as well as they can without interfering with the apparatus connected with the lighted globe. It may be supposed that this device is calculated to operate with much deadly effect whenever it is used; and there seems to be much doubt whether it will ever be allowed as a recognized kind of fishing within territorial waters. Indeed, the license granted by the government is said to be merely provisional, and for the purpose of testing the new machine.

TO COLLECT THE ODORS OF FLOWERS—Roses, and all flowers containing perfumed oils, may be made to yield their aromatic qualities by steeping the petals or flower leaves in a saucer, or in a flat dish of water, and setting it in the sun. The petals should be entirely covered with the water, which should be soft, or rain water. A sufficient quantity should be allowed for evaporation, and the vessel should be left undisturbed a few days. At the end of this time a film will be found floating on the top. This is the essential oil of the flower, and every particle of it is impregnated with the odor peculiar to the flower. It should be taken up carefully and put in tiny vials, which should be allowed to remain open till all watery particles are evaporated. A very small portion of this will perfume glove boxes, apparel, etc., and will last a long time.

PAINTING ZINC.—A difficulty is often experienced in causing oil-colors to adhere to sheet zinc. Boettger recommends the employment of a mordant, so to speak, of the following composition: One quart of chloride of copper, one of nitrate of copper, and one of sal-ammoniac, are to be dissolved in 64 parts of water, to which solution is to be added one part of commercial hydrochloric acid. The sheets of zinc are to be brushed over with this liquid, which gives them a deep black color. In the course of from 12 to 24 hours they become dry, and to their now dirty-gray surface a coat of any oil-color will firmly adhere. Some sheets of zinc, prepared in this way, and afterwards painted, have been found to entirely withstand all the atmospheric changes of winter and summer.

TO MAKE ARTIFICIAL SHAGREEN.—The substance known as shagreen, used in covering instrument cases, telescopes, sword hilts, etc., has generally been supposed to be derived from the skin of sharks and rays. We are now informed that an imitation is made in Russia, which can scarcely be distinguished from the original, and that this is prepared from the skins of horses, soaked in water and scraped, and while the skin is still soft, small seeds, such as mustard or chenopodium, are imbedded in it, and the surface afterwards shaved down. By dyeing with green, produced by the action of sal-ammoniac, or copper filings, and drying, the imitation in question is satisfactorily accomplished.

HINTS ON CANNING.—In canning fruit, if you hold your glass can in a wet towel it will not break when the boiling fruit is put into it. It need not be previously heated, but you must have the towel as high as the neck of the can and over the bottom. You can gather the ends of the towel in your hand to hold it by.

San Francisco Lodge Locals.

Recorders are invited to correspond Lodges may also find suitable reading here for "good of the Order."

San Francisco, 4.

A very enjoyable and select programme, for the benefit of Bro. Julius Kern, was rendered at the entertainment given by San Francisco, No. 4, at Cosmopolitan hall, B. B. building, Wednesday evening, July 19, 1882. The evening opened with selections on the piano by Miss Minnie Kelly. Miss Carrie Levy, the six-year-old daughter of Bro. Louis Levy, then rendered a recitation so elegantly and distinctly that she was loudly applauded, and, returning, gave another. Mr. Stewart then sang "Strolling by the Seaside," and accompanied himself on four instruments at the same time—guitar, harmonica, bells and drum. He was recalled several times and loudly applauded. Miss Ellen Coursen then sang in her usual effective manner, receiving an encore. Reading, "The Wounded Soldier," Miss Addie L. Ballou; song, Miss Linda Hoag, who sang with much precision and grace, and responded to an encore; song, Miss Fannie Cressy, "The Blue and the Gray," and on recall "My Grandmother's Old Arm Chair." Performances on the Jew's harp, Prof. Chasse, brought down the house, as did likewise the denticon solo of S. Thors. Besides these there were a tenor solo by Fraser Smith; a vocal solo by J. J. O'Neil; 'Original Creation of 'Perkins the Star,'" W. J. Leon; and feminine vocalization, Bamford, all of whom deserve credit for well doing. Bro. P. M. Reading also delivered an eloquent address.

Aurora, No. 8—D. of H. Installation.

Tuesday evening, July 18th, will be a memorable event in the history of Aurora, No. 8, at which time the new officers were installed, a select programme gone through, and a tubful of ice cream and a plentiful supply of coffee and cake annihilated. As Aurora meets at the same time and place as Olympic, 127, that Lodge was obliged to transact business early in the evening and give way to the swarm of fair ones and their escorts, visiting brothers and sisters from Silver Spray and Golden Dawn. After the installation ceremonies had been gone through with by M. W. Fish, D. D. G. M. W., in the pleasant and eloquent style peculiar to that brother, the literary programme opened with remarks on the history and state of the Order by Bro. E. M. Reading, of Silver Spray. Bro. A. R. Gunnison then made a few remarks. This was followed by an address from Bro. A. H. Cummings, which was elegant and classical in diction, graceful and eloquent in delivery. Next came a song from Sister Wilder, who was heartily applauded, and responded to the call with another. Recitation, Mrs. E. Holland, who cannot have too much credit for the easy, natural style in which she delivered the first recitation—a style which is often aimed at, but often overdone. She was encored, and responded to the call. Piano solo, Miss Raymond Haskell; song, Miss Van Blarcom; recitation, Bro. W. Dakin; song, Miss Viva Cummings; piano solo, Miss Hay; original essay, Dr. Dean; song, Alice Dixon; piano solo, Sister Congdon; comic song, Bro. Booth, of Dawn of Hope, who responded to an encore with a reading; song, Miss Bennett. All were well rendered. Closing remarks, Bro. Fish, after which the company betook themselves to the banqueting hall, and there disported amongst the ice cream and cake, which had been prepared for the occasion. On the whole, all think Aurora, No. 8, is entitled to the leading place among the D. of H. Lodges.

Valley, 30.

On July 27th two candidates received the J. W. degree, and three were given the M. W. degree. This Lodge stands far in the lead in point of numbers.

Unity, 27.

Unity, No. 27, held a very interesting meeting on July 25th. Five applications were received for the degrees, and six candidates were given the M. W. degree. The present M. W., Chas. Nelson, with the assistance of an efficient corps of officers, gave the written and unwritten work in a very creditable manner. There was a very large attendance, and the remarks of Bro. Danforth, Deputy, were quite interesting, partaking of fraternal criticism and heartfelt commendation for the successful career and prosperous condition of Unity, No. 27.

Sts. John, 73.

On Thursday evening, July 20th, C. J. Periam, P. M. W., was the recipient of a fine cane, a gift from Bro. Fletcher, the present M. W. This fine souvenir has a gold emblem of the Order set in the handle, and in every way is a choice gift. This was given as a reward for services rendered to Sts. John Lodge in bringing in new members.

Olympic, 127.

Olympic Lodge may well boast of an efficient and intelligent corps of officers, from Past Master Keating to Outside Watchman, S. F. Freeman, who never grumbles, but patiently and cheerfully bears the honors of his situation, and often wonders why some people should work so hard to get into office. F. W. Rossbach, the newly-elected M. W., is a live, energetic young man, and thoroughly understands the importance of his situation. Too much cannot be said in praise of the faithful and gentlemanly Recorder, R. H. Orton, and Financier, W. H. Barkley. Bro. E. Holland, Receiver, is thoroughly earnest in his convictions and alive to business. As Olympic's anniversary is fast approaching, a committee was appointed at the last meeting, with Bro. Holland, as Chairman, to make arrangements for its celebration. The death of Bro. A. McIntire was also announced. Bro. McIntire was Captain of the schooner *St. George*, which sailed last February from Port Townsend, Washington Territory, bound for the island of Kodiac, with a cargo of lumber. Nothing has been heard from any of the crew since, and it is supposed that all on board have perished, as the wrecked hull drifted ashore off Shoalwater Bay.

Friendship, 179.

Friendship Lodge gave her second anniversary entertainment, at Charity hall, 32 O'Farrell street, on the evening of Wednesday, July 19th, at which the following programme was carried out, under the auspices of the efficient committeemen: F. W. Swan, Geo Meyer, R. B. Kittredge, C. Schumacher, Chas. Creighton, Committee of Arrangements, and H. Gamba, J. W. Tamm, J. C. Fitschen, Reception Committee. Opening address, Dr. J. Grey Jewell; piano solo, waltz, Miss Carrie Millzner; recitation, "Emmet's Speech," Mr. H. S. Millzner; duet, "I would That My Love," Messrs. J. Owens and F. W. Swan; piano solo, Miss Mary Swan, niece of Bro. Swan; song, "The Bell Ringer;" zither quartet, the California Zither Club; song, "The Lover and the Bird," Miss Kate Finnegan, sister of Bro. Finnegan; recitation, Mr. W. B. Marschutz; trio, "Madre del Somno Amore," Miss A. Kasche and Messrs. E. J. Rose and R. Kuner. Part Second—Piano solo, Prof. H. C. Siebe, Organist of Fidelity Lodge; quartet, "The Two Roses," Messrs. Anderson, Swan, Organist of Friendship, and Nelsen; song, "Farewell," J. Owens; song, "Esmeralda," Miss Carrie Millzner, a Workman's daughter; duet, "The Fishers," Misses Edith and Rose Stanley; song, "My Sweetheart, When a Boy," F. W. Swan; duet, "The Fisherman," Messrs. Anderson and Nelsen; song, "The Nightingale's Trill," Miss A. Kasche; closing ode, tune, "Sweet Bye and Bye."

Triumph, 180.

The musical department in Triumph, 180, is among the best in the city. One commendable feature is that the vocalists of the Lodge meet and practice the odes.

Lodge Locals.

Santa Cruz, 46.

Bro. E. Danforth, D. D., installed the officers of Santa Cruz Lodge on Monday, July 17th, after which an elegant badge was presented to Bro. Danforth by the Lodge, Bro. O. W. Gordon, P. M. W., making the presentation in eloquent and appropriate language, to which Bro. Danforth responded in fine style.

Placer, 95

George D. Kellogg, Financier of Placer Lodge, writes: "We are gratified at the knowledge that we have so good an organization here, and that the meetings are well attended and a good degree of interest taken in the work. All seem to have a desire to do something for the good of the Order, and to insure us success in the future, we have elected an excellent corps of efficient officers to conduct us through the present term."

Southern California, 191.

EDITORS WATCHMAN:—While I am sending a list of our newly-elected officers, I thought I would say a word in regard to our Degree of Honor Lodge, recently instituted in this "City of the Angels," Fidelia, No. 11. This Lodge came into existence something over a month ago, and is flourishing finely, composed principally of Master Workmen from Los Angeles, No. 56, and Southern California, No. 191, the brothers, however, being in a minority, by a greater (numerical) preponderance of beauty and grace, as personified in our sister co-workers. Meetings to be held once a month, and it is the intention, after the routine of business is completed, to have a short programme of musical and literary exercises, and thus make each gathering a pleasant occasion of friendly intercourse and social enjoyment. We expect to have a very pleasant entertainment on the evening of August 8th. Respectfully Yours,

C. A. BASKERVILLE,

Los Angeles, July 15, 1882.

Butte City, 206

The following is from A. C. Heimbach, Recorder of Butte City Lodge 206:

EDITORS WATCHMAN:—Enclosed please find $2.50 as payment for your bill of May 18th, 1882, for 25 copies of the WATCHMAN. I am happy to say that 206 is in a flourishing condition, and, although we are not doing much now, still we are making preparations for a large increase of good material as soon as harvest is over. Our membership now is 40, and you can put us down for 60 good solid M. W. members before a year rolls around. Much interest is manifest at our coming election, and a full attendance is assured; but I do not mention this as an unusual occurance for Butte City Lodge, as it is noted for its regular attendance, and we can boast that it is one of our strongholds. The members of Butte City Lodge strive to make their meetings pleasant and are well rewarded for their efforts. The question is now being agitated among the brethern of our Lodge, that we offer some kind of short interesting entertainment at each meeting, which proposition is well received, and each member pledges himself that he will endeavor to do what he can toward making our meetings inviting and attractive.

Storey (Nevada), 3.

H. M. Zartman, Financier of Storey Lodge (Nevada), No. 3, writes: "On the 7th inst. the Lodge installed the officers for the ensuing term. All went well, with one exception. The Grand Master decided that J. H. Hubbs, our M. W., could not be installed P. M. W., not having served a majority of nights he was elected for, notwithstanding Bro. Hubbs had legal excuses for at least every night but one that he was absent. Bro. Hubbs served a term and a half as Foreman, and, during his last half term as Foreman, served some 10 or 12 nights as M. W. Bro. Hubbs is a young man competent to fill the position, and the members very much regret that he could not receive the honors of P. M. W. Our Lodge now numbers 119 members. We had four new applications at our last meeting, and I think our Lodge is in a fair way of gaining in numbers for the coming term. Times have been very dull here, but I think we are still able to hold our own with many other camps throughout the State. We often hear the argument that it is too expensive an Order. It is true that we paid 24 assessments last year, while some newer and less extensive Orders may have been somewhat lighter. That the A. O. U. W. has been tried for about 15 years and not found wanting, speaks well for the Order. Our jurisdiction is composed of Nevada, Utah, Idaho, Montana and Wyoming. Bro. J. W. Kinsley has organized six Lodges since our Grand Lodge met in May, and feels confident that by the time the next Grand Lodge meets, we will have a separate beneficiary jurisdiction. If so, we will be able to compete with any and all Orders for cheapness. But the greatest drawback and trouble with too many is that they want too much for a trifle or nothing. Almost every month our miners are called upon to donate to some widow or orphans that are left destitute by some fellow workman, yet hundreds refuse to do something for their families while here, and able to do so, and for the trifling sum of from $1.50 to $2.50 per month. But I am asking too much space, so I will close by promising to let you hear how we are progressing in the future."

Tombstone (Arizona), 8.

This Lodge was organized January 12, 1882, with 27 charter members. It now numbers 45, and is in a healthy, prosperous condition, financially and otherwise. Recently the new officers were installed, after which the newly-installed officers, together with the members of the Lodge and a few invited guests, adjourned to the Melrose restaurant, and were seated at tables which literally groaned under their burdens of delicious viands. There were present, besides the newly-installed officers, the following members of the Lodge: M. Present, M. J. Leonard, W. Higgins, J. B. Cameron, J. Bruce and L. Cropstein; Messrs. Kayser and Mather, of Nevada, and Romish and Chisholm, of California. The invited guests were: Thos. Atchison, M. E. Joyce, I. O. Smith, A. Wolf and J. O. Dunbar. An exceedingly pleasant time was passed, toasts, speeches, etc., filling in the intervals when knife, fork and spoon were idle. The occasion will long remain green in the memories of those who were fortunate enough to be present.

Oakland Lodge Locals.

Ivy, 4.

EDITORS WATCHMAN:—The installation of officers in Ivy Lodge, No. 4, Degree of Honor, took place on Thursday evening, July 20th, at A. O. U. W. hall. D. D. G. M. Chas. E. Alden officiating as master of ceremonies, assisted by J. A. Swenarton, and A. T. Eastland. Following are the names of the officers installed: Mrs. Sturrock, P. W. S. H.; Mrs. Markell, W. S. H.; Mrs. Simons, S. of H.; Miss T. Cavasso, S. of C.; Wm. Winney, Sec'y; Adele Cavasso, S. U.; Joseph Simons, I. W.; Mr. Markell, O. W. Quite a number of candidates were initiated in the Degree, and after the installation ceremonies, addresses were made by the officers, also by the D. D. G. M. W.; following this, a fine collation was spread by the sisters, after which the floor was cleared, and to music furnished by Prof. N. L. Le Noir, of Pacific, No. 7, those present indulged in the light fantastic for a few hours.

A Fraternal Visit to San Leandro, No. 12.

On Friday evening, July 21st, a fraternal visit was paid to No. 12 by the members of Ashler Lodge, No. 165, of Alameda, and Keystone, No. 64, of Oakland. After a cordial greeting was extended to us by No. 12, business was resumed, and on an invitation from Bro. Cheminant, D. D. G. M. W. of Alameda, Dist. No. 1, Bro. Chas. E. Alden, D. D G. M. W. of Alameda, Dist. No. 2, installed the Financier and Guide (who were not present at the regular installation) in his usual happy and impressive manner, having all his work committed to memory. After the installation, Bro. Alden was again invited to exemplify the unwritten work of the Junior Workman Degree, and was followed by Bro. Cheminant with the Master Workman Degree. Addresses were then made by Bros. Cheminant, Alden, Barton, Bryant, Tyrrill and others. After the close of business, the brothers repaired to a neighboring restaurant, and were there entertained by the San Leandroites, and had that hospitality shown to them for which the brothers of No. 12 are so noted. The "Favorite" being in readiness, we started for home, and after a pleasant and enjoyable ride, we arrived in Oakland at midnight, loud in our praise of the reception we had received at San Leandro.

Yours in C. H. & P., OAKLAND.

New Lodges.

EDITORS WATCHMAN:—In your issue of July 15th, Bro. Hoffman calls the attention of Lodges of this city to certain rumors, "that certain parties are again in the field and hard at work for the purpose of forming a new Lodge of the A. O. U. W. in this city." That certain parties are working for the laudable purpose of forming a new Lodge of the A. O. U. W. I acknowledge, and fully approve and believe that many "good and true" Workmen of this city will agree with me when fully informed of the reason and objects these gentlemen had in view for petitioning for a charter to organize a new Lodge of our noble Order in this city. A large portion of these gentlemen are members of a social club, and, as such, desire, with some of their intimate friends, to associate themselves with our great and noble Order. There is not one of the 53 applicants on that list who is now a member of the Order. Neither was there one of these 53 petitioners on the list (to which Bro. Hoffman refers) asking for a charter some months ago.

As none of these petitioners are members of the A. O. U. W., there can be no "soreheads" or disappointed "office hunters" among them. And, as our law provides that charter members shall pay $10 for degree fees, $2 for medical examination, $1 for beneficiary certificate and $1 to the beneficiary fund, making a total of $14, it cannot, therefore, be inferred that they consider our fees too high.

I cannot, for my life, see where the great injustice to the most of our Lodges would come in by granting these gentlemen their request for a charter. What is the condition of our city Lodges at present? There are 23 Lodges in the city—actually but 21, as two of them, No. 159 and No. 185, are so far removed from the center of the city that they cannot well expect a large membership at present. Of these 21 Lodges in the city, one of them has 99 members; three of them, from 105 to 110 members each, and the others range from 136 to 888 members.

The membership in this city June 30, 1882, was 4,521, making an average of 196 per Lodge. Nearly three years ago, when Excelsior Lodge was instituted, many of the members of the 15 Lodges, which then existed in this city, made the same objections to granting them a charter that is now being made in granting a charter to these gentlemen. Has the Order suffered for having granted them a charter? Has the Order suffered for having granted seven other charters since then? I think not. Neither have the older Lodges suffered from such grants. They have more than doubled their membership since then.

Now I ask, what reason, what good reason can be offered for refusing these gentlemen their request. If there are any objectionable names on the list, let some member point it out and have such name stricken out. But, in the name of humanity, don't strike off the whole on account of one or two. Remember the Golden rule of life, "As ye would that others should do unto you, do ye even so unto them."

My brothers, think well before you decide to withhold your consent to this most reasonable request. How many of these gentlemen can you bring into your Lodge? If your membership is too small, go to work among your friends, and get them to join with you.

Let each individual member work with a will among his numerous friends, and explain to them the benefits they will derive personally, in addition to the protection offered their families, by association with us, and the complaint of limited membership will no longer exist. As to "meager attendance at their meetings," the cause lies not with limited membership, but rather with want of life, of zeal, on the part of the officers and the members. Make your meetings interesting by having, under good of the Order, social and literary exercises.

Yours in C., H. and P.,

A. A. EGLESTON.

Tribute of Respect.

[IN MEMORIAM.]

At a regular meeting of Washington Lodge, No. 60, held July 13, 1882, the following preamble and resolutions were adopted:

WHEREAS, It has pleased the Supreme Master Workman of the universe to remove from our midst our late brother Abraham Goldsmith; and,

WHEREAS, It is but just that a fitting recognition many virtues should be had; therefore, be it

Resolved, By Washington Lodge, No. 60, A. O. U. W., that, while we bow with humble submission to the Most High, we do not less mourn the loss of our brother who has been taken from us.

Resolved, That, in the death of Abraham Goldsmith, the Lodge laments the loss of a true Past Master Workman, a faithful Recorder of the Lodge, an active member, whose utmost endeavors were exerted for its welfare and prosperity, a friend and companion who was dear to us all, whose upright and noble life was a standard of emulation to his fellow Workmen.

Resolved, That the heartfelt sympathy of the Lodge be extended to his bereaved family in their affliction.

Resolved, That these resolutions be spread upon the records of this Lodge, and an engrossed copy thereof be transmitted to the family of our deceased brother.

GRAND MASTER BARNES, having returned from the East, has resumed his labors of visiting Subordinate Lodges, and will continue to do so throughout the ensuing term. It is a great honor to the Order that we have so inteiligent and enthusiatic a worker as Bro. Wm. H. Barnes, standing at the head of our jurisdiction, and we should lose no opportunity to give our worthy Grand Master an encouraging word.

Election of Officers, A. O. U. W.

AURORA, No. 8, D. of H., S. F.—Mrs. C. D. Dunn, P. W. S. of H.; Mrs. E. Holland, W. S. of H.; Mrs. F. W. Rossbach, S. of H.; Mrs. B. S. Hill, S. of C.; Miss Ella Freeman, S. Sec'y; Mrs. A. H. Cummins, S. Treas.; Mrs. O. A. Deering, S. Usher; W. H. Barkley, I. W.; Frank Freeman, O. W.

DEL NORTE, No. 183, Crescent City.—Wm. H. Jeter, M. W.; R. G. Knox, F.; Ed. Straub, O.; G. Curtis, Rdr; W. H. Woodbury, Fin.; B. McCush, Rvr; J. Delany, G.; G. E. Bosch, I. W.; J. Richert, O. W.; Wm. Crawford, Trustee; F. Knox, Med. Ex. Reported by G. Curtis.

SAN PABLO, No. 186.—David Jacob, M. W.; H Blume, F.; H. N. Thode, O.; Otzro Rumrill, Rdr.; Ehrood Pouisset, Fin.; William Mulligan, Rvr.; M. E. Valencia, G.; Alexander Provizzio, I. W.; Antonia Machado, O. W.; J. J. Braman, Med. Ex.

HANFORD, No. 189.—John W. Ramsey, M. W.; Charles J. Beckwith, F.; John McKelvey, O; James A. Hill, Rdr; P. A. Hoy, Fin.; Emil Seligman, Rvr; Erastus Axtell, G.; John J. Breeding, I. W.; Simeon Crane, O. W.; B. A. Fassett, Trustee; C. H. Vanbalkenburgh, Med. Ex. Reported by Jas. A. Hill.

SOUTHERN CALIFORNIA, No. 191, Los Angeles.—Geo. A. Townsend, M. W.; J. N. Guinn, F.; Jos. Hamilton, O.; Chas. A. Baskerville, Rdr.; Daniel Drysdale, Fin.; Newhall Mathews, Rvr.; R. Y. Templeton, G.; J. W. Henderson, I. W.; A. M. Griffith, O. W.; H. C. Austin, Trus. Reported by Chas. A. Baskerville.

VALLEY VIEW, No. 208, Selma.—A. Barteau, M. W; G. B. Sargent, F.; J. T. Wood, O.; E. H. Tucker, Rdr.; Robert Balding, Fin.; Louis Cohen, Rvr.; E. J. Henderson, G.; Turner Elder, I. W.; A. N. Judd, O. W.; N. L. Tomsen, Med. Ex.

SOMERSVILLE, No. 210.—Charles Courtwright, M. W.; John Butt, F.; Michael Mellyn, O.; John Tierney, Rdr.; Wm. Murrey, Fin.; Patrick Brown, Rvr.; James C. McDermott, G.; Chas. Voltz, I. W.; Henry Habenicht, O. W.; George, Dallow, Trus; Dr. Wimple, Med. Ex. Reported by John Coll.

LOOKOUT, No. 211.—C. A. McCosh, M. W.; L. G. Brownell, F.; F. N. Roberts, O.; D. N. Brown, Rdr.; H. S. Brown, Fin.; S. C. Woods, Rvr.; J. N. Barnes, G.; H. O. Page, I. W.; D. C. Brownell, O. W.; C. A. McCosh, Med. Ex.

NORTH STAR, No. 213, Smith's River.—James L. Becksted, M. W.; H. C. Ransom, F.; Wm. H. Otto, O.; O. V. Wallace, Rdr; J. F. Thorwarth, Fin.; James Brooking, Rvr; Fred. Shanks, G.; David Whiteside, I. W.; Antonio Deneri, O. W.; J. F. Thorwarth, Med. Ex. Reported by O. V. Wallace.

DUNNIGAN, No. 215.—G. F. McDonald, M. W.; L. M. Clark, F.; J. P. Potrey, O.; J. F. Dillon, Rdr.; Thomas Mitchell, Fin.; G. B. Lewis, Rvr.; James Lillie, G.; Thomas Nugent, I. W.; J. F. Dillon, Med. Ex.

Nevada Elections.

ALPHA, No. 1, Eureka.—W. E. Taylor, M. W.; W. H. Davenport, F.; A. Hintze, O.; I. C. C. Whitmore (re-elected, eighth term), Rdr; H. T. Hoadley (re-elected, third term), Fin.; Wm. Pardy (re-elected, eighth term), Rvr; O. H. Smith, G.; J. Toginni, I. W.; L. Leeser, O. W.; C. Simms, Trustee; G. H. Thoma, Med. Ex. Reported by I. C. C. Whitmore.

RIVER, No. 6, Dayton.—W. A. Rulison, M. W.; F. P. Chrisman, F.; L. Vincent, O.; J. A. Bonham, Rdr.; A. G. Berry, Fin.; George W. Keith, Rvr.; J. L. Robertson, G.; Geo. Cobb, I. W.; F. Winzell, O. W.; J. R. Shaw, Trus. Reported by J. A. Bonham.

LUCILLE, No. 8, Sutro.—Richard B. Davis, M. W.; Richard E. Williams, F.; John Early, O.; Robert Rowland, Rdr; Caleb J. Crowley, Fin.; George Rammelkamp, Rvr; Peter R. Savage, G.; Cornelius Mullen, I. W.; William Roberts, O. W.; Edward Hancock, Trustee; Dr. J. C. Hazlett, Med. Ex. Reported by R. Rowland.

Montana Elections.

BOZEMAN No. 5.—Samuel Langhorne, M. W.; M. M. Black, F.; James Jobb, O.; E. M. Gardner, Rdr.; F. Gilchrist, Fin.; John S. Axtell, Rvr.; Geo. Nickols, G.; Frank Sloan, I. W.; C. F. Baker, O. W. Reported by E. M. Gardner.

SOCIETY PAPERS.—We believe that the facts will warrant the assertion that, other things duly considered, the prosperity of the A. O. U. W. in any given jurisdiction will be in direct ratio to the hearty and liberal support given to the organ of the Order, by the membership within said jurisdiction. No wiser measure could be employed, no cheaper method of making all Lodge work effective, and filling up the ranks of the membership, than for a Lodge to subscribe for one or two dozen copies of a good A. O. U. W. paper, for the purpose of distributing it in the neighborhood as a recruiting agency.

EASTWARD-BOUND TRAVEL.—Workmen will do well to bear in mind that Brother J. Meredith Davies is the General Agent of the Pioneer Short Line connecting the Central and Union Pacific with Chicago and the East, giving the very best accommodations and making the shortest time. He will gladly attend to all business entrusted to his care, and may be found at all hours of the day at the office, under Palace Hotel, No. 2 New Montgomery street. Any one thinking of going East should give him a call.

AMONG the passengers checking baggage for the overland train were 66 Chinamen, holding through tickets for Boston via New York. They were evidently house servants who had served time in San Francisco, being well dressed, well fed, trim-looking, and all speaking more or less English. What English they did speak, however, they refused to air in explaining the immediate cause of their departure.

THE Palace hotel, that huge caravansary, which always fills the stranger with awe at first sight, knowing that he is viewing the largest hotel on the continent, is beginning to look soiled on the interior. The profits of this establishment for the past fiscal year were $100,000. They have an average of 900 boarders.

WE met Brother R. Y. Glidden, of Stockton, 23, at the meeting of Magnolia on Monday evening, the 17th. He has flattering news from this old pioneer. Their membership will soon pass the 200 mark, and also the sister Lodges in that vicinity.

E. O. M. A.—The Empire Order of Mutual Aid, which restricts its membership to the State of New York alone, now numbers 8,278 members.

Laws Passed by Supreme Lodge.

The following legislation of the recent Supreme Lodge is of interest for reference:

Laws Applicable to Grand Lodges.

Add new Section, No. 26.

26. Incorporation of Grand Lodges.—Grand Lodges of the A. O. U. W. shall not become incorporated under the laws of their respective States, nor shall they permit their Subordinate Lodges to be incorporated, unless the articles of incorporation have been presented to the Supreme Master Workman and been approved by him.

Laws of General Application.

Amend Law No. 11 to read as follows:

11. Degrees.—The Subordinate Lodge Degrees shall not be conferred upon any person for a less sum than five dollars for the two degrees. Except, however, that Grand Lodges may provide that at the institution of a new Lodge all that may be required of the applicants shall be the payment of the fee for charter and supplies. This shall not include the payment of medical examinations, certificate and advance assessment to the beneficiary fund.

Amend Law No. 14 to read as follows.

14. Quorum.—Five members of a Subordinate Lodge, having the Master Workmen's degree, shall be necessary to constitute a quorum for the transaction of business.

Amend Law No. 36 to read as follows:

36. Members of Defunct Lodges.—A Lodge that has been suspended for the period of three months under the provisions of Article XI, of the Constitution, or a Lodge that has voluntarily surrendered its charter, or had the same taken away, for any cause shall be termed and known as a defunct Lodge. Its membership shall be disposed of as herein provided, if said Lodge is not reorganized within the period of one year from the time it became defunct. Should the members of said Lodge desire to reorganize within the period before mentioned, they may do so, provided there be the names of seven of the former members of the Lodge on the petition sent to the Supreme Master Workman or Grand Master Workman for that purpose; they shall pay the expenses of the Supreme Master Workman or Grand Master Workman, and they shall, on reorganizing said Lodge, also pay for such supplies as are necessary to complete the reorganization. A member of a defunct Lodge who was in good standing at the time of its dissolution may be admitted into another Lodge after having applied to and received from the Supreme Master Workman, or Grand Master Workman, as the case may be, a card signed by said Supreme Master Workman or Grand Master Workman, and attested by the Supreme Recorder or Grand Recorder, with the seal attached, and countersigned by the member. The application for such card must be made within 20 days of the date of the dissolution of the Lodge, and must be accompanied with the fee of two dollars, the card to hold good for six months. The member holding a card must notify the Supreme Recorder or Grand Recorder, as the case may be, of his address, and must forward his assessments for the beneficiary fund whenever notified, as required by the beneficiary laws of the Order. He must, before the expiration of six months, deposit said card with some Subordinate Lodge, and in event of his failure to do so, then his beneficiary certificate shall be annulled by the Supreme Recorder or Grand Recorder; provided that if any brother having attempted to comply with the provisions of this section and been rejected by a Subordinate Lodge, he may retain his membership in the Order by continuing to pay his assessments to the Supreme Recorder or Grand Recorder, and paying further to said Supreme Recorder or Grand Recorder, the sum of five dollars annual dues.

THE Grand Master Workman of California, William H. Barnes, Esq., is a Boston boy, and was born on Congress street. Brother Barnes was one of the Representatives from California at Cincinnati, and proposes to extend his journey to Boston. He would like to meet the Workmen of Boston and vicinity, and it has been arranged that he will address us at the hall of Beacon Lodge, 50, Temple place, Boston, on Monday night, June 26th. All who attend will be well repaid. See that your neighbor knows about it. Don't fail to hear Brother Barnes, of California, on the 26th inst. Brother B. is an old society man, and is up to his ears in the A. O. U. W. The California brethren swear by him.

New England Workman.

BRO. R. W. JACKSON, 614 Market street, has the largest and most complete assortment of curiosities and rare relics of the sea, together with Abalone shell jewelry of all kinds of any house on this coast. Tourists and visitors are well repaid in visiting this choice collection, and are always tempted to buy these gems of the ocean.

BRO. F. R. GIRARD, 322 Sutter street, is importer of and agent for the justly renowned Wheelock pianos. These pianos are manufactured in New York, and the most skillful workmen in the world are employed in their construction. Bro. Girard often loans a piano for Lodge entertainments.

BRO. W. C. PRICE, of the wholesale and retail commission house, 320 Washington street, is one of the prominent and reliable merchants of this city. As a shipping and commission house in all kinds of produce, they stand in the front rank.

"Just Like a Man."

"They do beat all!" sighed Mrs. Peek, as she wiped her face earnestly with a spotted cotton handkerchief, and set her spectacles aloft on top of her cap border. "I summered an' wintered one on 'em nigh on to 50 years, and the things he done't I don't see into up to this day. Beside, I had sons, and darters' husbands as well, and they're all of a piece; tarred with the same stick, as Lias used to say."

"Well," spoke up Miss Patty Brinkly, a vivacious maiden lady, stopping to thread her needle, with both elbows on the quilt frame, and her thread and needle stabbing at each other nearly half a yard away from her straining eyes. "I ha'n't never had no such experience, thanks be to praise! Pa used to say if I had ha' married anybody I'd have killed 'em or ran away from 'em, and I dunno but what I should."

"They had something to be thankful for, then, as well as thee, Patty," dryly remarked Aunt Marcia Blinn, the only lady of the "Friends" persuasion, as she called it, of whom Oakley boasted.

"Well, they're queer, anyhow," resumed the Widow Peek. "There's no 'countin' for 'em; they'll up and do things you wouldn't no more expect of 'em than anything; and as for bein' protectors for women-folks and all that, which folks tell about in books, my land! Lias Peek would ha' died more'n 40 times ef I hadn't ha' had dry things for to put onto him when he came in soakin' wet out of the crick, or after a pourin' rain. As 'twas, he died o' rheumatiz't he took along o' floating saw-logs down to the mill in a spring freshet and never coming home to dinner, but working all day in them damp clothes. I give him pokeberry rum, an' a hemlock sweat, and two hull bottles of Gumption's Ginger Bitters, besides a rubbin' of him powerful with camphire, before I sent for the doctor; but it struck to his stomic and he went off like a snuff. But that a'n't here nor there; as I was a-sayin', for nigh onto 50 years I'd put his flannel shirts into the front left-hand corner of the bottom drawer in the m'hog'ny bureau in the bedroom, and every Sunday mornin' reg'lar, when he was cleanin' up for meetin', he'd holler out 'Lurancy! where's them flannel shirts o' mine?' Now that's so!" concluded the disconsolate widow, wiping her eyes, and adding in a stage aside—"But I'd give consider'ble to hear him holler that again!"

"And they hain't got no memory," put in Miss Patty, who had at last coaxed needle and thread to an amicable understanding, and was quilting away with zeal and discretion, as every good quilter knows how. "I never see the time when they wouldn't forget things. I've tailored round quite a number o' years, and I've hed an eye on 'em, as you say. There was Silas Buck, I used to tailor for his folks consider'ble; the' was him and three boys and the hired man. Well, I'd get out o' linen thread, say, and you can't no more make overhauls with sewin' cotton than you can with spider-webs, and Mis' Buck she'd say, 'Silas,' says she, 'Miss Patty's all out o' linen thread. When ye go down to the store after them rake-tails I wish you'd fetch up a hank o' black and a hank o' brown. Now don't you forgit it!' and Silas he'd laugh, he was just as clever as a basket o' chips, and he'd say—'I'll fetch it, mother;' but he wouldn't! 'nd I set an' set a waitin' for 't, and fin'lly put on my bonnit and was a mile down to the Corners for to fetch it myself; then he'd say, 'Cousin Patty'—you see we called cousins because his father's second wife was sister to my Aunt Sophrony's husband—'Cousin Patty, hain't you got them overhauls done yet?' and I'd sorted bluster up 'nd say, 'Cousin Silas, I a'n't no more able to make bricks without straw'n the' Isr'elites was for Pharo', and you did'nt fetch me no thread yesterday!' and then he'd haw, haw, haw, right out; he was real clever, but land! so shiftless. That's just a case in p'int, so to speak, ye know; just one time, but you can tell by a little what a great deal means, and as Mis' Peek says, they're all alike."

"Thee doesn't think women-folks are all perfect, does thee, Patty?" querried Aunt Marcia, in her calm voice.

"Well, I dono as they be; I dono as I said they be, but you can gen'lly tell where most of 'em'll fetch up, and you're kinder fit and prepared for what they will do, and especially for what they won't do. Sometimes they'll disapp'int all your calculations, but then you can fall back on Scripter, and see't they was made to be the weaker sect; though, if t'aint really lawful to say so, I own I always did have a poor opinion of Adam as ever was; to be a tellin' how 'twas Eve made him eat the apple, when he done it the first time askin'; but 'twas jest like a man! They keep a doin' of it to this day; it's forever an' always 'the woman tempted me.'"

"Thee remember, doesn't thee, the Scripture says: 'The woman being deceived was in the transgression.' It hath always seemed to me kindly in Timothy so to speak of her as to lay the blame on the enemy.'"

"That ain't neither here nor there," answered the logical and undaunted Patty. "I ain't tryin' to make light of Eve's disobeyin', but I do say Adam was real mean to get behind her; he was able to say he wouldn't, I guess, jest as well as she was, but he didn't no more'n she did. I was a readin' somewheres t'other day, about an old French feller, a judge or somethin'—judge of a p'lice court, I expect by the tell—and whensomever they fetched a man before him that had been took up for a misdeed, no matter what it 'twas, he always asked, 'Who is she?' lettin' on as though a woman was to the bottom of every wrongdoin'. Clear Adam! And that's what I fault 'em for."

"Well, they be queer," Mrs. Peek again took up the fruitful theme. "Sary, what was that you was a telling about Thomas and them letters t'other night?"

"Oh, ma!" said Sarah Beers, deprecatingly, but with a laugh that lit her pale face and sad eyes. For Sarah was a typical New England woman—careful and troubled about everything; a coward physically, a hero mentally; afraid of her very shadow, but doing the bravest things, with her heart sinking and her joints trembling all the time, because duty or affection called her to such service. She married Tom Beers, a bright, strong young fellow, full of fun and reckless daring, and devoted to Sarah, but entirely ignorant of her daily anxieties and terrors; for she was as reticent as she was timid, if she thought she could save any one—much more any one she loved—by such reticence.

"Oh, tell on 't, Sary; 'tain't no harm. We all know Tom sets by ye like his life. He wouldn't do nothing to plague ye, if he knowed it, no more'n he'd cut his head off; but that letter business was so exactly like men folks."

A chorus of voices echoed the request. There were only about 10 people at the quilting—it was the regular sewing-circle meeting of Oakley—so Sarah consented.

"Well, 'tain't much to tell, but if ma wants me to. You know Tom's horse is real young, and kind of skittish, and if there *is* one thing above another I'm afeared of, it's a horse."

"Bless your soul and body!" put in her mother, "I never see the thing yet you wa'n't afeared of, Sary, horse or not."

"Oh, I know, ma, but I am awfully afeared of a skittish horse; Tom, he do'nt really sense it, and he says Jenny ain't ugly, she's just full of play; and I s'pose she is; she's knowing as a dog, and I give her a bite of somethin' every time he fetches her round; and she knows me real well, but she will jump and lash out and shy sometimes, and it makes me just as weak as water, so I don't never drive her ef I can help it."

"You don't mean to say you ever do drive a cretur when you feel that kind o' way toward it?" queried Miss Patty, sharply.

"Why, I have to sometimes, you know; there's oft-times a day Tom can't leave the hayin' or harvestin' or plantin', or something, and there has to be things fetched from the store, and no way to get 'em except I go for 'em, so Tom he jist tackles up and I go for 'em; he don't really mistrust that I'm scared, and I don't never tell him that I be; what's the use?"

"Well," said Miss Patty, with a sniff no type can express, and Sarah went on:

"So week before last, Aunt Simons writ and said she was comin' out to stay a day or two before she went back south, and she was goin' to fetch Joe, that's her oldest, along with her; she wanted for to have us meet her to the station, but she said she shouldn't come if it rained; she's got dreadful weak lungs; but she'd telegraph if she wa'n't coming. Well, Wednesday morning, the day she set to come, it did rain, sure enough, and seeing there was the donation party to get up, I sided my work away early and walked over to the Center, for I knew I should find all the folks I'd got to see to home. I'd just got ready to start for home about noon time, and I bethought myself to step into the post-office, for I knew there'd be the mail for the creamery, so I got a double handful of letters and papers and set my face toward home, when who should come up but Tom in the buggy.

"'Get in!' says he, 'I'm agoin' to the station.'

"'What for?' says I.

"'Why,' says he, 'they hain't sent no telegraph, so they're coming.'

"'But it rains,' says I, 'and Aunt Simons said she shouldn't come if it rained.'

"'Well,' says he, 'I obey orders and break owners; she said she'd telegraph if they wa'n't comin'; and how do you know but it didn't rain there.'

"So I got in and put the mail down into the seat, and he driv like Jehu, for, we heered the train whistle; and says I "Oh, Tom! don't drive up the hill to the station, I'm so afraid Jenny 'll be scared.'

"He laughed a little. 'I'll bet she wouldn't be half so scared as you,' says he; 'but I'll leave you to the foot of the hill, and if they come I'll holler down to you, and I'll get in and go up to t'other station and put 'em into the hack that waits there, for there can't four get into this buggy; and you drive along up to that station and then I'll put you into the hack with Aunt Simons, and I'll take Joe along 'o me in the buggy.' So sayin' he jumped out, for we was there, and run up just in time to catch the train. I didn't have a thought that they'd be there, but they was, and he called out, 'They're here, drive along.' I knew 'twas the quickest way to take the road alongside the track, but the 'Tuck train was due, and Jen is skittish, but I thought I'd ought to, so I drove along; there wasn't no train, but right in the road, where I couldn't turn nor back, I see two loose horses—and if there is a thing that puts lightin' into Jenny it's loose horses. I tell you, the shivers run down my back, but I knew the only chance was to go so fast she wouldn't think about side shows; so I jist laid the whip onto her, and she sprung to and went by them horses quicker! Well, the hack was going over the bridge but I catched up with it, and Joe, he got out with Thomas and took the buggy and I got in with Aunt. Tom had got to go up street to get a can for the creamery. I called out to him as we went off.

"'Look out for your mail on the seat,' and we drove along. But we hadn't gone a half a mile before Tom he come tearing along and stopped the hack.

"'Where did you put the mail?' says he.

"'Why, on the seat of the buggy,' says I.

"'No, you didn't!' says he; 'there wasn't nothing there but papers.'

"'I guess I gave you the letters, then. I sort of thought I did,' says I.

"'Well, I haven't got 'em, anyway,' says he. 'Look in all your pockets, Sary, they ain't in mine.' So I looked and looked, but I hadn't a letter. I knew I had'nt, but I looked to suit him. Then I thought how I drove by the side road, and I told him I guessed they'd jolted out of the buggy when I driv so fast.

"'Dear me!' says he. 'I must have those letters to-day. I've got to; I'll go back over the side road and see if I can see or hear anything about 'em.' So he turned round. I tell you, I felt real bad; I couldn't think anyway in the world what I did with them letters, and I see he was worried to death. After we got to the house and Aunt Simons was fixin' herself upstairs, he drove up with Joe.

"'Sary,' says he, 'do look over your pockets again for them letters; I expect there was a three-hundred-dollar check in one of em, and we can't afford to lose it.'

"I was just ready to cry, I tell you, but I over looked the pockets again; they wa'n't there, and he said there wasn't any sign or hearin' of 'em on the road. I felt as though I should give up, when he turned and went out of the door; but just as he swung the gate to, he hollered out:

"'Sary! Sary!' and I run. 'I cave!' says he, laughing; 'here they be in my own pocket; you did give 'em to me.'

"Sure enough I did, but he put 'em into a pocket he didn't use for letters, ordinarily, so he never looked there! and there wa'nt no check at all in any one on 'em."

"I guess you were mad?" queried Miss Patty.

"Well, I was a little stirred up, I don't deny; I set right down and cried quite a spell."

"Wan't that real man?" Mrs. Peek asked of the audience, with a tone of fine scorn.

"Did thee wish, then, thee'd never seen thy husband?" asked Aunt Marcia of Sally.

The anxious face flushed and the sad eyes sparkled.

"Aunt Marcia, I shouldn't know how to live without Tom, anyway, in this mortal world!" And the clear voice broke down as if the thought of such contingency was too much.

Aunt Marcia Smiled.

"I expect there is faults in all human creatures. 'Male and female created He them,' though; and we can't set out greatly to better the Lord's plans. We couldn't really get along thee knows, without menfolks, and they could not without us; but, I expect, if thee could hear them talk amongst themselves, Miss Patty, thee would hear, quite frequent, 'Just like a woman.'"

Miss Patty could not deny it.—*Rose Terry Cooke.*

Spontaneous Combustion in Process of Drying.

A recent fire on the premises of William S. Slater, in Rhode Island, which did some injury to his mills, brings into conspicuous notice the spontaneous combustion of yarn dyed certain colors, while not fully recovered from the operation of the dry-room. The statement is made by Edward Atkinson that during the past four years the several mutual companies of New England have suffered a loss of more than $300,000 from spontaneous combustion of dyed cotton goods in dry-houses or finishing departments. Some heavy losses have occurred from this cause where aniline, cutch, logwood, iron and other common substances have been used for dyeing, without the use of oil of any kind.

There are several colors produced in calico print works and dye-houses which are sources of danger from combustion. They are the colors developed, after the materials have been applied to the cloth or yarn, by chemical reactions in the tissues, with the production of heat, and also by the aid of heat applied to the fabrics in the aging boxes and chambers. Spontaneous combustion in black, brown, slate and pearl-dyed woven fabrics and yarn is frequent. The conditions under which fires have occurred, seem to have been where cloth or yarn recently dyed or dried over dyeing cans, has been rolled or piled hot or slightly damp, either of which conditions are hazardous as regards spontaneous combustion.

Some time since Edward Atkinson suggested the following precautions to be observed by members of the company of which he is President: Provision should be made for a thorough cooling and drying of the fabrics before folding, rolling or piling in bunches; dyed fabrics must not be allowed to remain in compact masses in an unfinished state over night; but have them starched, cooled and finished as quickly as possible; dyed goods or yarn should not be piled in large quantities, but spread over a sufficient surface to permit them to cool readily; a suitable place of deposit, as nearly fire-proof as it can be made, should be provided for keeping goods over night that are liable to spontaneous combustion, if such keeping cannot be avoided.—*Manufacturer and Builder.*

The Education of Mechanics.

So many of our systems have been faulty, and have been rectified, that people naturally come to think everything old and in need of reformation; and thus it happens occasionally that some of our good old systems are destroyed from our very attempts to make them better. Now some of our wise men, who have done much toward making our educational system more practical than it formerly was, are advancing ideas of so extremely practical a nature that it is somewhat doubtful whether from what originally impelled them to good will not result in a monstrous evil.

Some few years ago, when there were no high branches taught in the public schools, the system was railed against; and now that they are taught, the dissatisfaction seems greater. It is called impractical, for there is said to be a smattering of everything and a thorough knowledge of nothing. It is considered especially ill adapted to the boy who intends to become a tradesman. And since a city will require more mechanics than men of any other class of labor, our school system is in bad repute.

We are referred to the French. They have organized in all their cities technical schools, and they are producing model workmen. In England they have done likewise, and the result is the same. It is feared that if we do not shortly follow their example we will have no workmen to take the place of the present generation, who have so rapidly advanced our manufactures to the prices they now command in the world's market. We are told that we must have work intelligently executed to compete with France and England, and that if we do not our manufacturing industry will sink into the insignificance from which it so recently sprung.

To avoid the great wave of mechanical ignorance that is advancing upon us, a system of public instruction is proposed that shall educate each boy to a special vocation.

Just as a gardener has need of a certain shape and quality of a tree, and trims and tends a young one with the certainty that it will grow to be exactly what he wants, so our practical men mean to have workmen in readiness for the vacancies occurring in the world's workshop.

The practical men ask: What is the use of a boy spending time in the study of literature or metaphysics or art, when literature or metaphysics or art will be of no earthly good in his work as a mechanic?

But, one can but wonder, do these men who want to make specialists of public-school-attending boys, educate their own sons after this theory? Have they not, from their original generosity in seeking educational reforms for the public, come to be patronizing?

We do want good mechanics; we want intelligent mechanics; but we want them from choice, and not from compulsion. We want to see boys have a taste of general education, that they may live and die with more than one idea in their heads, and that, one of earning their living. The money-making genius is something, but it is not everything.

Let our public benefactors think—not mechanically, but humanly—before they change our educational system. Let them turn aside from their calculations and theories, from their principles and practices, and go back to their former selves—when they felt and thought naturally—before they were so eminently practical and so exclusively scientific; before all their soul ran into mind; before their seeming foolishness developed into their present wisdom.

What is looked upon as superfluous education serves a similar purpose to the ornamentation in our homes—we can live without it, but such life is not worth living; and will not education grace as well the mechanic as the man who does nothing?

After all, beyond the workman is the man. Let us have the man first, the workman afterward.

THE HOLDING POWER OF BRASS TUBES IN TUBE PLATES.—A number of experiments made by Mr. W. H. Shock, U. S. N., on the holding power of brass tubes in tube plates, have given results worthy of attention. Forty-eight experiments were made with brass tubes, nine inches area in cross section, tubes with screwed ends, having a sectional area of 1.33 inches. The average resistances obtained with each method of tube fixing before the tubes were withdrawn from the plate was as follows: No. 1, tubes simply tightened with the expander, 6,700 lbs.; No. 2, expanded and beaded over, 16,829 lbs; No. 3, expanded, ferruled and beaded over, 31,751 lbs.; No. 4, expanded, and ends screwed into ¾-inch nuts, 25,212 lbs.; No. 5, expanded, and ends screwed into ¾-inch nuts and ferruled in addition, 39,935 lbs. In 75% of the tests, the plate representing the tube plate was ¾ inch thick, and the rest ⅝ inch and ½ inch thick. It appears, then, that where the tubes were beaded over and ferruled, the variations of thickness of tube plate from ⅝ to ¾ inch did not increase the holding power. The holding power of tubes simply fixed by the expander, and neither beaded over nor ferruled, is generally very much beyond any strain that would be put upon them by the working pressure of a locomotive boiler.

JOHN RINGGOLD, "king of the cowboys," killed himself at Morse's canyon, in the Chihuahua mountains, Arizona, Friday.

The War in Egypt.

Since our last issue the bombardment of Alexandria by the British fleet has resulted in the routing of the forces under the command of the insurgent, Arabi Pasha, and the occupation of the city by the British and American marines—their object being to protect the city from plunder and retsore order under the constituted authority of the Khedive. During the bombardment of the city and before the marines could land from the foreign men-of-war in the harbor, the city was pillaged by the Arabs and thieves generally, many people were murdered and many buildings burned, including the Consulates of Great Britain, the United States, and other nations. At the time of the present writing, order has been restored in Alexandria, the Khedive has been reinstated in his capital, but the hordes of Bedouins and other plunderers under Arabi Pasha are encamped at a distance and are now menacing Cairo, and the Suez canal is still in great danger.

The details of the war are given from day to day in the daily papers. We allude to the matter chiefly to give, by the aid of an engraving, a glimpse of the sort of people who are disturbing the peace of the old "granary of the world." Our picture is reproduced from a painting by Gerome, and gives a good idea of several classes who figure largely in the population of Egypt. Upon the right of the engraving is a dignified merchant of capital and pretentions. He is either a Turk or Persian; grave, sedate and dignified, and as dissimilar to the excitable and vivacious Arab as is a mastiff to a spaniel. His courtesy is as great as his gravity and his dignity. He does the honors of his stall like a prince, and his snowy turban, long *caftan* (gown) and venerable beard flowing down like floss-silk over his breast, cause him to resemble one. Yet, as you see, there is "speculation in his orbs," and the venerable man has actually converted himself into a walking bazaar, with Turkish cimeter from Damascus in silver sheath, dangling from his peaceful loins, an embroidered jacket thrown over his shoulder, and a silken scarf hanging from his left arm, all on exhibition to a small group of four customers, all of different nationalities, as shown by costume and countenance.

The cimeter, with hilt of rhinoceros-horn and curved blade, on which are inscribed verses from the Koran, has attracted the attention of the Turkish *cawass*, or mercenary soldier, who is apparently examining the temper of the blade, or the inscription thereupon. Armed to the teeth, with sword at side, and two pistols ostentatiously displayed in his sash, he is quite the ruffian he looks; equally ready for riot or crime, and as reckless of his own life as of that of others.

His companion, who is also eagerly examining the same cimeter, and whose costume is so dissimilar, is an Arnaout or Albanian soldier, whose semi-Greek costume and blood have not made him a whit less savage in nature or inhabits than his Turkish *confrere*. In fact, he is apt to be the worse devil of the two, and his face indicates it unmistakably, though his gay, half-Greek costume, and long gun with crutch-like stock, make him the more picturesque vagabond of the two. The other two are evidently mere passers-by, attracted by curiosity and the love of seeing the progress of a trade, both strong passions with the native Egyptian. And these are to the "manor born" Egyptians, *per sang*, which none of the others are. One is probably a neighboring trader, the other the servant of some rich bey or pasha.

In the distance you see the muffled figures of two women, carefully shrouded and veiled from the gaze of man, but whose costume is not suggestive of the symmetry of the fair forms it may or may not so effectually conceal. The latticed window above indicates that it is a harem they are entering, into which their sable guide and guardian, of neutral gender, has preceded them.

The face and attitude of the old merchant make a good study. He is watching with penetrating eye and immovable *sang froid*, the intent faces of the prospective purchasers, whose whole armory of weapons cannot protect them against his superior craft and managment. On his extended fingers he is indicating the price he will take for the coveted cimeter—300 piasters, probably, as his three fingers only are extended.

GROUP OF EGYPTIAN SOLDIERS IN THE BAZAR IN CAIRO.

Wallace Ross says that he is ready to row Hanlon five races on five consecutive days, each race for $1,000 a side, for a distance of from three to five miles, the races to begin on Monday and end on Friday, and no postponement to be allowed on account of the weather. Winnipeg is suggested as the place.

Prof. Proctor on Astrology and Superstition.

Prof. Proctor, in his lecture on astrology at Boston, said that astrology was by no means "a contemptible superstition." "On the contrary," said he, "I think that of all the errors into which men have fallen in their desire to penetrate into futurity, astrology is the most respectable; I may even say the most reasonable. No other method of divination of which I have ever heard seems worthy to be mentioned in company with astrology, which, though erroneous, had a foundation in thoughts well worthy of consideration." He explained many of the rules of the old astrologers, and their methods of calculation. After considering several curious illustrations of the apparrent fulfillment of predictions, astrological and otherwise, the lecturer showed how these cases and the influence they exert illustrate Bacon's statement that "men mark when they hit, but never mark when they miss." In conclusion, he congratulated his hearers on the fact that the science of our time is not employed, as was the science of old days, to spread superstitious beliefs or observances. "I forbear from inquiring here," he said, "how much of what was taught by the old astrologers and wonder-workers of Chaldæa and Egypt to strengthen their position among an ignorant and superstitious people has come down even to our own day, and not only in matters regarded as superstitious, but in some still held in reverence by many millions of men. I simply say it is well for mankind that the men of science of our day—especially those most maligned for their outspokenness—are honest. Were they leagued to deceive the world by wonder-working, their task would be an easy one. To undeceive the world would be much more difficult, for 99 out of 100 want to be deceived.

Lime in Brass Tubes.—In districts where water is largely impregnated with lime, iron tubes will not answer for locomotives. Lime is quickly deposited on the tubes, and it adheres much more strongly than it would on brass tubes, using the same water. In brass tubes a thin scale of one-sixteenth to one-eighth inch thick would be formed, while the incrustation about the iron tubes would, in a few years, completely block up the water space between the tubes. When this takes place it is impossible to keep the tubes at the fire-box end tight. To prevent the sediment from adhering to the iron, paraffine oil is recommended, even where brass tubes are used. About three pints for every 1,000 miles run, put into the boiler the evening before washing out on the following day, is mentioned as the quantity. Being free from acid, this oil is safe to use.

A district governor was beheaded, and 25 soldiers of his escort killed by Montenegrin insurgents.

Healthfulness of Various Mechanical Pursuits.

Miners, says a contemporary, though rarely working more than six hours a day, seldom attain the age of 40. Smelting is considered a most fatal occupation. The arsenic in quicksilver mines is very baneful to the workers. Many of the miners are destroyed by bronchitis from inhalation of dust.

The life of a miner, at best, is a hard one. Often bent for hours in a constrained and unnatural position, inhaling noxious gases and dust, and absorbing, as they do, in mining metals, violent and dangerous poisons, and added to that, the perpetual dread of explosions, fall of roof, outbreaks of water and fires, it is no wonder that their average life is less than 40.

Some years ago, a fire took place at Avondale, Pa., in the only shaft by which egress from the mine was possible, and many miners shut up below suffered horrible deaths. Some barricaded themselves in a passage of the mine, and, stuffing with their clothes chinks in a dividing wall, sought to keep out the noxious gases and approaching death. But all in vain! Their wives and children, gathered about the pit's mouth, after the fires had burned out, to see brought up the charred remains of those whose toil had earned the pittance and kept them in bread.

In the pointing of needles by dry grinding the workers are soon affected by cough and purulent and bloody expectorations. The same dangers are experienced in the grinding of cutlery. Accidents frequently occur, and the workers are afflicted by what is known as the "grinder's roe."

Notwithstanding the improved machinery used, the evil effects of factory labor are very marked. The worker in textile fabrics—that is, cotton, wool, linen, etc.,—suffers from the effects of dust soon after entering the workroom, which causes continual tickling in the throat, and incites hard coughing. The first premonition is pain in the breast, with obstinate debility and loss of appetite; white viscid matter is expectorated with difficulty, for several hours after work, and under the microscope this sputa shows plainly that it is cotton fibers. The special influences that operate for the production and aggravation of pulmonary diseases exist in this industry to a degree that obtains in no other. The average length of life in this occupation is 28 years.

Those engaged in the manufacture of wall-papers and artificial flowers, especially where arsenical green is used, speedily show the ill effects of their employment. So do the makers of lucifer matches; the phosphorus required in their composition first attacks and ruins the teeth.

Painters and color-mixers absorb metallic poisons through the skin and respiratory organs, which subject them to frequent disorders of the lungs, stomach and nerves.

The Life Spirit.

What causes the balmy winds to gently fan the earth until she arouses from the long slumber into which, during dreary winter, she had fallen, and sends up countless plants and flowers, and makes the bleak forest kings to put forth buds and leaves, changing the wilds to a scene of enchantment, grand in its immensity? 'Tis this mighty sovereign, the life spirit. Who has not gone forth in spring and marked his kingly sway over all the earth? Not only in spring, but throughout the passing year his rule is absolute. Think not, when in summer's parching droughts, dreary autumn or icy winter, death seems to be over all, that it reigns supreme. No. Life is still there, the predominant power, and is only preparing ere long to burst forth in renewed splendor. The gurgling brook, the swift, flowing river, the placid lake, the roaring cataract, the boundless ocean, with its broad, warm currents, flowing from continent to continent, are but his vassals, dispersing moisture throughout his realm. The all-reviving spirit rules throughout nature's wild domain, and all her forces are but his agents.

Even the mighty atmospheric currents traveling from east to west, unite their power with that of earth's giganticmountainchains, and the lightning's vivid blast, to obey his behests and awaken new life throughout his immeasurable domain. Yea, the mighty sun himself is but the servant of this wonderful spirit, ever dispensing, at his command, warmth and light to his numberless subjects.

Who has not seen this mighty monarch in all his glory, for nature's broad domain is ruled by him. Where can man look or go and not find this wonderful all-pervading spirit? Though he climb to the summit of the most lofty peak of the snow-capped Himalayas, or descend into the deepest recess of Ætna's fiery crater—he is there. Though he roam from zone to zone, or sound the deepest caves of ocean's huge caverns—he is there.

Yea, let his search begin in the darkest corner of Pluto's sunless domain, then on through earth's remotest lands, then onward through boundless space, follow each planet as it moves in its shining orbit, or chase the dazzling comet in its mad career, and he will find no spot where this sublime spirit rules not. For since the morning stars first sang together, and, methinks, this music of the spheres was but the glad song in which they acknowledged his sovereignity, has this viewless spirit reigned supreme. In the beginning, he sprang from the throne of a loving God, and from thence he has reigned and will ever rule over all.

And man—though the change we call death come over him, though we fold the wearied hands and lay him within the bosom of mother earth, though worms devour the decaying flesh which we were wont to love—why should we mourn and call him dead, since all nature teaches us the wondrous fact that it is but the change which precedes a glorious immortality; that even in that decaying frame the life spirit rules supreme. So plainly is this taught throughout all nature, the more we investigate her laws, it seems scarcely necessary that to the reflecting mind a special revelation should be made. The shock of being separated from the dearest ones of earth seems often more than the human heart can bear; but with calmness comes the knowledge that the separation is not necessarily permanent, and that they are beyond all care or pain. Beyond all pain! Do we ever fully realize how much that means?

"There is no death! An angel form
Walks o'er the earth with silent tread;
He bears our best loved things away,
And then we call them 'dead.'

"Ah! ever near us, though unseen,
The dear immortal spirits tread
For all the boundless universe
Is life! There is no dead!"

Renovating Old Hats.—Hatters use either a spirit or alkali size for stiffening hat bodies. The former is a thin varnish, composed chiefly of shellac, to which a small quantity of gum sandarach, mastic and copal is added, and the whole dissolved in wood spirit or alcohol. The copal is dissoved separately from the others, and is added to the other solution. The alkali size is made by dissolving substantially the same ingredients in a borax solution. It is applied hot. When the application has been made, the hat body is warmed in a drying oven, and then steeped all night in water in which a small quantity of sulphuric acid has been added. This sets the stiffening in the hat body.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, - August 1, 1882.

Longevity.

That people in general are attaining greater longevity in the last half century than formerly is certainly a well attested fact, as the statistics of life insurance will show, as well as the great number of old persons now living who are far more numerous at the present time than they have been since the good old days of yore, if we may be allowed to judge from the frequent notices of persons arriving at unusual years, contained in the newspapers of the day. This state of affairs can be attributable to nothing, if not to improved modes of life, and a more extended knowledge of the laws of health.

For these we are indebted directly or indirectly to science. That to live long and also well, is the chief desire of man—the materialist as well as the spiritualist—connot be disputed; and that the *summum bonum* of scientific progress and investigation is to effect this, none can doubt. That we are on the eve of increasing longevity, as well as discoveries of incalculable worth to mankind, seems at last to be the reward of the patient investigation and unconquerable perseverance of the nineteenth century.

For a long period it has seemed that the lengthy strides of civilization and science have only been effecting amongst us a kind of degeneration. What, with the widespread introduction of labor-saving machinery, and consequent glutting of luxuries, the sacrifice of the physician upon the altar of the mental powers, and the alarming increase of hereditary disease, the necessity of new and improved methods of living has been made manifest, and there is certainly every reason to believe that the new state of affairs has already had a salutary effect.

It is to be hoped that science has at length arrived upon that vantage ground from whence she can look back and say positively to men: "Now you may live longer and better lives."

WHAT THE WORLD THINKS.—The act of the Michigan A. O. U. W. Lodge, which, by connivance with one of its members, treacherously obtained an opinion of the court, contrary to the legality of the Relief Law, is universally condemned. In a legal point of view, there has always been some doubt about the Relief Law, being that the Grand Lodges of the different States have State charters, but in a fraternal and common-sense view, we believe the law is good, and is so accepted by a vast body of members. Those who go to the courts on such a matter should be frowned upon. In such Orders the courts should never be appealed to except in a case of general wrong or great individual oppression. No matter what the result, the appeal to the courts hurts an Order and provokes internal troubles. This member, no doubt, cared nothing about the 10 cents, but was one of the "smart" people often found, or fancied his toes were being trodden upon. He cared nothing for the mutuality of the plan and the fact that it was approved by all but a few like himself. He took the Order to court, defeated it, injured it, shook confidence in the precision and wisdom of its laws, discouraged its friends, gave its enemies cause to exult, and, no doubt, sits back and jingles his 10 cents in his pocket with a feeling that he is a hero.—*Phila. World.*

A General Review of the Situation.

It is safe to say that the entire membership of the A. O. U. W. is now fully, if not over, 110,000. In the Supreme Recorder's summary for the month of May, the entire membership footed up 108,951. This is a brilliant showing for a 14 years' existence. As we have said before, there must be some stronger tie which binds this great army together than the mere insurance feature, though we must admit that this is the one great inducement to outsiders to join the Order. It would, however, be a cold, feelingless organization were it not for this fraternal link which binds us all, high and low, rich and poor, officer and plebeian, into one common brotherhood.

Now, what is this principle—this powerful link that has held us together for 14 years; that has sustained us in storms that would otherwise have wrecked our insurance ship; that has placed us in the front rank of fraternal societies, and made us more respected, perhaps, among those who are not society-goers than any other organization? Fellowship! What a wealth of good feeling lies in that one word! What a heavy blow to rank and title, to pomp and power, to ancient rite and ceremony, and how powerful in its good work!

An army of 110,000, which, if arranged in single file, would extend 40 miles! All Workmen, and carrying $220,000,000 worth of insurance, backed by their honor and fellowship, and an untold fund of capital. In this State we have 220 Lodges, with 15,500 members, and increasing at the rate of 200 members per month. The certainty and promptness of our payments is unprecedented in the annals of any life insurance or mutual or social company ever known to history. The late disaster in the town of Grinnel, where 40 Workmen lost their lives by the violence of a hurricane, is a forcible example of the necessity of having a national as well as a State jurisdiction, and of the efficacy of our system.

We are not antagonistic to any humane, fraternal organization or society; on the contrary, all societies having for their object the elevation or amelioration of mankind, welcome us as a brother and co-workers. It is a tried and well-seasoned system of furnishing life insurance; still this is only one of the excellent features of the Order. The teachings of our Lodge-room, the simplicity and wisdom of our Ritual, are calculated to instill a feeling of fellowship and common brotherhood, without regard to rank, title or pedigree, which is naught if not ennobling. And we wish to state just here, that we believe that those Lodges which debar an honest man, and qualified to become a Workman, from entering their doors, unless for better reasons than that he is not aristocratic enough, or not up to their ideas of caste, are acting in direct opposition to the most sacred principles of the Ancient Order of United Workmen, and committing a sacrilege against the Ritual, for all good and true men are welcome in our Order and in any of our Lodges.

Yet, grand as have been the results growing out of our labors for humanity during the past few years, there is still vast room for improvement. The more members we get, of course, the greater the amount of good willbe done. But we should rather aim at sure and solid improvement than at a booming kind of progress.

In another article will be found some sensible advice which, if followed, will, we believe, tend in no small degree to make our Order a crown and glory to the civilization of the nineteenth century. Let us bear in mind, "Who aimeth at the sky, shoots higher much than he that means a tree."

Prosperity.

It is universally conceded that much of the prosperity and wonderful increase of last year was owing to the general enthusiasm which prevailed among the members of the Order, and this enthusiasm was largely created by the official visits made by the Grand officers and the deputies, and the many public gatherings of the people, where addresses upon the aims and objects of the A. O. U. W. were delivered. Not only did the members of the Fraternity, with their families, have joyous reunions, but the people at large were also partakers of the enjoyment, and it resulted in large accessions. The Grand Master is pursuing the same course this year, and is arranging for public and private gatherings at many points. With his competent corps of Grand officers, and his efficient staff of deputies all over the State, it does not require a prophet to predict another successful year for the A. O. U. W. in California.

It is scarcely necessary to add that full reports of all these gatherings will be given in the WATCHMAN, and that our reporter will be present. Work by the officials, and visitations, are essential and profitable, but it is equally necessary that the same should be chronicled, and the news spread far and wide, that it may inspire and cheer others. That is the WATCHMAN'S province, and that is what we propose to do.

NEW LODGE.—The petition for the new Lodge of Workmen in this city has been scrutinized closely, and the list of well-known citizens thereon is meeting with favorable consideration.

About Lodge Cards.

In the last issue of the WATCHMAN we gave a full exposition of the law, as it now stands, in relation to reinstatements, and, believing we can do the Order no better service than in continuing to give instructions in regard to various Lodge matters, we have concluded to present a series of articles accordingly, and will treat in this issue on the subject of Lodge cards, so called.

Cards are of two kinds, Clearance Cards and Final Cards. The former is designed solely for the purpose of transferring a member from one Lodge to another, and the other for the purpose of allowing a member to sever his connection with the Order altogether, and doing it honorably.

Any member is entitled to either of these cards by conforming to the requirements of the law, unless his Lodge should desire to put him on trial for some offense. Cards are amongst the reserved supplies of the Supreme Lodge, and none are valid that do not bear the seal thereof.

Clearance Cards.

The term "Clearance Card" is misleading. It is, in reality, a "Transfer Card," and should be so denominated. A Clearance Card may be granted for any period up to six months from the date of issue. The time for which dues are paid determines the life of the card; but for good and sufficient cause, the Lodge granting such card may recall or annul the same. The fee for granting a Clearance Card cannot be more than one dollar.

The holding of a Clearance Card does not abridge the rights of a member in any regard whatever. His membership is not severed with his Lodge. During its validity he may exercise any of the functions that he was entitled to exercise before it was granted, and on its expiration, simply loses its privileges, but nothing more, provided, of course, he has kept his standing good, by paying his assessments. In short, the effect of a Clearance Card is merely to grant a member the privilege of joining some other Lodge of the Order, within the time for which his dues have been paid in advance, provided he keeps his assessments all paid up in his Lodge. He must notify the Recorder at least once a month of his address, so that the Financier may send him notices of assessments. This is for his own protection against suspension.

Wishing to join some other Lodge, he makes application in writing for deposit of his card within said Lodge. It may be well to remark here, by way of parenthesis, that the phrase "Deposit of Card," as used in the law, means transfer of membership, and not the mere leaving of a card with the Lodge to which the member applies, which he must do with his application and transfer of membership in such case only occurs by election, in accordance with law. "If the Lodge is satisfied of the correctness of the card, the application shall be referred to a committee of three members, whose duty it shall be to inquire of the Lodge granting the card if all assessments for the beneficiary fund have been paid by the brother holding the card, and report at the next stated meeting of the Lodge as to the character and fitness of the applicant for membership. If the report be favorable, the applicant shall be balloted for; and if only two black balls appear against him, he shall be declared elected to membership. If more than two black balls appear against him, he shall be declared rejected. When admitted to membership, the brother shall pay a fee of not less than two dollars."

The foregoing paragraph is quoted from General Law, No. 20, and is applicable to Lodges of the order everywhere. On page 114 Digest, paragraph 628. Note—We find the following ruling on above law:

"The duty of ascertaining if all assessments have been paid on a card, is placed by the above law on the Investigating Committee, but it may be performed by them through the Recorder. This would seem to be the better plan, as all communications should bear the seal of the Lodge, of which the Recorder is the custodian. No vote can be taken by a Lodge on the application for the deposit of a card, without first having received official notice from the Lodge granting the card, that all beneficiary assessments due thereon have been fully paid and that no charges are pending against the brother holding said card, and no action can be taken on a card after the expiration of the time for which it was granted."

It is plain, from the foregoing, that transfer of membership occurs when a member is elected into another Lodge, and the election is so declared by the Master Workman, and not before, provided the conditions precedent have been complied with, and that the time for which the card was granted has not expired at the time of election. It frequently happens that a member takes out a card for only a month; that is, he pays but one month's dues in advance, and before the preliminaries are concluded in the Lodge, he desires to join, so that a ballot can be had before the card expires. As this arrests further progress in the case, the member should at once apply for further time on his card, as is his privilege under General Law, No. 22 which, being granted, the work can be completed.

When the member is elected, the Recorder should at once notify the Lodge granting the card of the fact, which Lodge should immediately forward the "beneficiary fee" to the Lodge in which the member "deposited his card;" that is, transferred his membership.

The beneficiary fee is usually one dollar, but sometimes it is several dollars. For instance, the Lodge to which Bro. John Smith belongs meets on Jan. 1st. It receives on that night notice of three assessments for the month, and remits for one and leaves nothing in the beneficiary fund. John then applies for a card, which is granted, paying his dues for a month in advance and also three dollars for the assessments just levied. On the 2d he applies for admission by card to another Lodge, and on the 9th is elected. Official notice of such election is read in the Lodge granting the card before remittance is made to the Grand Recorder for the second and third assessments of the month. It has the three dollars "beneficiary fee" paid in on the 1st by Bro. Smith, and that is the amount to be remitted to the Lodge to which his membership has been transferred, and that Lodge can then remit two dollars on the second and third assessments, and have one dollar left for the next. But if the former Lodge has remitted for the second and third assessments to the Grand Recorder before receiving notice of the transfer, then the remittance to the other Lodge would be one dollar. Hence the rule: Remit to his Lodge whatever moneys may remain in the beneficiary fund of the brother's payments at the time official notice is received of his transfer.

It is not good policy to take a card for a period much exceeding that necessary to become connected with some other Lodge, for dues in that will begin with his membership, and having already paid dues in the Lodge he left, double dues will result, with no remedy under the law.

When a member has been transferred, it is the duty of the Recorders of both Lodges—that from which he went and that to which he went—to enter the same on the beneficiary certificate register book, and report the fact to the Grand Recorder on the next monthly report, giving number of beneficiary certificate, date of election, and name and number of the Lodge to which the member went, or from which he came.

The space at our command precludes the further pursuit of this subject in this issue of the WATCHMAN. In our next it will be continued. Meantime Recorders and others interested are asked to preserve this paper for future reference.

Useful Resolves.

An exchange publishes the following golden resolutions, which should be cut out and read daily by every member of a fraternal society.

Let us resolve:

That we pay our assessments promptly.

That we will religiously attend all Lodge meetings.

That we will do our level best to make these meetings attractive.

That we will act up to the maxim that "what is worth doing at all is worth doing well."

That we will talk only when we have something to say.

That after we have said that something, we we will stop talking.

That when we have nothing to say we will keep quiet.

That we will pay respectful attention to what the other brothers may say.

That we will second the efforts of our officers to make the exemplification of the "work" effective.

That we will maintain the good name and fame of our Order everywhere and at all times.

That we will extend its influence to the full extent of our ability.

That we will, every one of us, hand in the name of at least one good and true man for membership.

That we will search out and care for all brothers sick and suffering.

That we will help one another in every way possible.

Deer Hunting.

The fine engraving which occupies the first page of this issue of the WATCHMAN is timely, because it will remind many that this month opened the deer season in this State, and that if they are intending to take a vacation for a deer hunt, this is the time to do it. Deer hunting is one of the most fascinating of field sports, requiring as it does skill, endurance, energy, some knowledge of woodcraft and abundant patience. For this reason, too, it is a favorite sport with a great many. The "deer season" is now at its best time, and hundreds of city people are enjoying the fresh air of the country and its revivifying influences, making the pursuit of deer an excuse for the vacation.

THE Supreme Recorder's report shows the entire membership of the Order, on June 1st, to have been 108,951. It is safe to say that the present membership over-reaches 110,000.

IN our report of the Relief Committee in our last issue we said that there was $225 in the Treasurer's hands, when it should have been $419.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. PRATT, G. R.

WM. C. FLINT, ESQ., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

OUR Lodges will please be careful to follow the new law in relation to the reinstatement of members. Henceforth no member can be reinstated, except on a favorable vote of his Lodge, and the date when such vote is taken will be the date of reinstatement. In the last issue of the WATCHMAN, the law in relation to reinstatements was fully stated, and if Recorders will cut out the article and preserve it in some manner for ready reference, there need be no necessity to stumble. Every Lodge should have the WATCHMAN—several copies of it—so that matters of interest may be seen by the principal Lodge officers, at least. Its statements are in no wise official, but may be relied on as excellent authority on all matters of law; and in the absence of a new Digest, the articles now running through the paper will be found of great value to the Order.

ALL communications intended for this office should be addreseed to St. Ann's building, corner Powell and Eddy streets, San Francisco. A good many go to Oakland and a good many are addressed simply San Francisco. We get them all, after awhile, and after more or less irreverent expressions on the part of the postmen. If the above directions are observed on the part of correspondents, serenity will prevail and the language will not be perverted.

AN error occurs in the circular of the Supreme Lodge in the amendment of general law 36, relating to defunct Lodges. The reference in the second and third lines reads, "Art. VIII., Sec. 11. of the Constitution." It should be *Article XI., of the Constitution*, as will be readily seen by reference. Probably an error of the "intelligent compositor."

WE furnish badges of one uniform quality and schedule of prices. Set for officers, including one for P. M. W., $12. P. M. W. badges $1.50 each. Members' badges, 60 cents each. If lettered in gold, from 10 cents to 20 cents each extra, according to number. This statement is made in answer to many inquiries.

SEVERAL Lodges are delinquent in their semi-annual reports. They should all have been in before this, and several are in the same fix in regard to their monthly reports. Boys, brush up; your reputation is suffering.

OUR increase for June over all losses was 175. It will probably be about the same for July. There have been issued 17,200 beneficiary certificates and about 14,800 remain in good standing.

LODGES having less than five rituals are privileged to buy enough to make up the deficiency, but no more. The price fixed by the Finance Committee is $1.50 each.

IN the last assessment list, the age of Bro. Marshall was inadvertently omitted. It was 42 at time of death.

University Register.

We herewith return our thanks for a copy of the Register of the University of California for 1881-82. It is a neat and carefully-printed pamphlet of 96 pages, from the last page of which we extract the following relating to the Lick Observatory:

The county of Santa Clara built a road to the summit of Mt. Hamilton of the best possible construction, and of easy grades, at a cost of about $78 000, and keeps the same in repair. The observatory peak, 4 256 ft. above the level of the sea, has been cut down to a level surface just large enough to contain the necessary buildings. The observing station already contains a valuable equipment. The *transit house* is of corrugated iron, and contains a four-inch transit (by Fauth, of Washington), the chronograph two chronometers, and a portable comet seeker. The time instruments were made use of in observing the transit of Mercury, November 7, 1881. A dome at the northwest corner of the peak contains a twelve-inch equatorial telescope, of fine construction (by Alvan Clark & Sons, Mass.). In the center of the plan of permanent buildings is a massive pier of brick work, surmounted by the telescope mountings and by the telescope complete.

The most important feature of the Observatory is to be a refracting telescope of thirty-six inches clear aperture. The contract for its construction has been let to Messrs. Alvan Clark & Sons for $50,000, and is a work of more magnitude than has ever been undertaken by any manufacturers. The glass is to be finished before November 1, 1883.

COLLAPSE.—We learn that the A. O. U. W. Lodge of this place is about to collapse, not for the want of funds or membership, but because the members fail to attend as required by the by-laws and constitution. The chapter will be revoked unless proper attention is given to it. —*Kern Co. Californian.*

A Word to Members.

An eminent statesman has said: "I know no safe depository of the ultimate powers of society but the people themselves; and, if they are not enlightened enough to exercise that control with some degree of discretion, the remedy is not to take it from them, but to inform their discretion by education." Although these words were uttered in a wider sense, yet they apply with equal force to any society or organization. If members are not enlightened enough to know their duties, and practice them, the whole system suffers. In another column will be found some useful resolutions which it would be well for members to peruse. Be on hand early in the evening at your Lodge meetings, and spend the time before the Lodge opens in reading the rules or literature of the Order, or in conversing about the same. Recollect that, when the Lodge opens—

"A little nonsense now and then,
Is relished by the best of men."

But "enough is as good as a feast." The Lodge is opened for business, and not to furnish opportunities for a display of buffoonery and sarcasm, which undoubtedly will continue to create ill-will and dissension among the members, unless the evil is promptly abolished, and this can only be brought about in part by the officers of the Lodge, the main remedy resting with the guilty themselves.

Another bad habit is to be continually scrambling to the floor to get the last word on a question of parliamentary law, or rules of the Order. Don't talk unless you have something new to say; of all deaths the most tortuous is to be talked crazy and then have to perish ignominously in a lunatic asylum.

Old talkers often monopolize time which might be more profitably spent in getting the opinions of members who are not so voluble, but might, perhaps, have some other end in view than the display of oratorical powers. Business is often allowed to drag because certain members always want to say something on the question. It seems that a great deal of business which is often brought before the Lodge could be dispensed with in much shorter time, and often in much better shape, if it were understood that certain officers should attend to it, subject, of course, to reconsideration.

Thus, if the business is gone through with promptly and rapidly, there will be a little time in which those disposed to entertain will find an opportunity to do so, and the evening will not be laboriously passed either. We have noticed that those Lodges which get through their business as rapidly as possible, and have singing, recitations, or something entertaining at each meeting, always have a good attendance, and are always the most prosperous.

This is undeniably a better plan than to give a mammoth entertainment once in three months, as these are always attended with extra trouble and expense. As the members are, so shall the Lodge be; as the Lodge is, so shall the entire system be. Let us bear in mind that "deeds are fruits, words but leaves," and remember the story which Aiken tells of the poor woman who fell and injured herself so that she could not walk, and a crowd soon gathered around her. One polite person pitied her, another promised to make her case known, but a plain, modest-looking young man stepped forward, paid for a coach to convey her home, and slipping a piece of money into her hand, disappeared. One kind act done with simplicity is worth a thousand fine speeches.

A NEW IDEA.—It has been suggested by quite a number of the brothers of the Order, that there be formed a dramatic and literary club, to be composed of members, their sons and daughters, and to be known as the "A. O. U. W. Dramatic Club," or any other suitable name which may be decided upon, whose object will be to assist at charitable or other entertainments given by the Order. A meeting to consider the above will be held at the rooms of Bro. H. C. Eastman, at 841 Market street, Friday evening, August 4th, at which time Bro. Eastman will be pleased to see all those who feel an interest in this matter. It is to be hoped that this undertaking will be properly engineered and carried to a successful issue, as it will contribute in no small degree to break the monotony of the usual entertainment, and add to the laurels of our flourishing Order.

ABRAHAM GOLDSMITH, our late brother, who had been Recorder of Washington Lodge, A. O. U. W., for the last four years, was one of our leading and honored citizens at the time of his death. He also held the position of Reporter in San Francisco Lodge, No. 1922, K. of H., and Secretary of the Free Sons of Israel. He was buried under the auspices of the F. and A. M. of this city, his membership being with Nevada Lodge, No. 13. He was at one time Treasurer of Nevada county, and had held important trusts in various benevolent organizations. The esteem and respect in which he was held was evinced by the very large concourse of mourners who attended his funeral. He left a large family, who, by the wise provision made in his beneficiary certificates, are well provided for, which constituted all his estate.

Fidelity's Visitors.

Fidelity Lodge may well feel proud that she has the finest Workmen's hall east or west of the Rocky mountains. Her membership is large and select, though not beginning to approach, in point of numbers, that of Valley, No. 30. Last Wednesday evening Fidelity was visited by Grand Master Barnes, Grand Recorder Pratt, Deputy Grand Master Loud and E. M. Reading, and District Deputies Danforth and McKay, with several visiting brethren of note in the A. O. U. W. After Lodge business had been dispensed with, a short recess was taken and spent in social converse, after which the visiting Grand officers, deputies and others were introduced by the Master Workman.

Grand Recorder Pratt, the father of the Order in this State, being introduced, expressed himself as gratified to meet his children, and after paying them a compliment on their good looks, proceeded to indulge in the retrospective, and to compare the great army of 15,500 men with the little handful which gathered together to form California, No. 1. Through it all he had been an earnest worker for the cause, and though he had not, perhaps, done so much as others with greater ability, yet none cherished more love for the A. O. U. W than he.

D. G. M. Loud was then introduced, and briefly made a few remarks. In referring to the Iowa rebellion he said, "it had been nursed in weak hands, and that had there been a steady hand at the helm when the rebellion was but a ripple on the smooth surface of the waters, Iowa would never have seceded," and predicted that, as we now have brave men at the head, "in one year the seceded element will have passed away."

District Deputy Danforth was next introduced, and stated that he wanted to see all Lodge work uniform throughout the State, so that visiting brothers can go from Lodge to Lodge and find everything working like clockwork; that he was working to effect this, and urged others to do the same.

Grand Master Workman Barnes was next introduced. He said that the duties of his office as G. M. W. were so manifold that to attend to them properly demanded almost his whole time and attention; that he has 65 deputies working under him, each expecting words of cheer and instruction. He alluded pathetically to the meeting of himself and Bro. Pratt with the father of the Order, J. J. Upchurch, in Cincinnati, congratulated the members on having so elegant and commodious a hall, and said there was none finer east or west of the Rockies. He reviewed the past of the Order, and noted its remarkable growth; spoke of his journey East and through the Cotton States, where his boyhood days were passed in Georgia; of his travels through New England and reception by Beacon Lodge, No. 1, of Boston, where he reported addressing one of the finest bodies of men that he ever had the pleasure of addressing, and being received with a cordiality which speaks well for our State and Californians generally.

Bro. Barnes was followed by District Deputy McKay, Bro. A. A. Eggleston, P. M. W., and District Deputy T. Haun, of Berkeley, who spoke briefly, and, the hour getting late, Fidelity adjourned, "tall trees and little trees, and ferns and grass and moss" dispersing to their homes.

Musicale in Oakland.

Last Thursday evening, June 27th, was spent in a very enjoyable manner by the members of Pacific Lodge, No. 7, and their many friends, at Mulliken's hall, Oakland. Long before the hour of commencing, every seat in the large hall was filled, and by the time the orchestra commenced playing Schlepegrell's beautiful "Aurora," "standing room" was at a premium. Master W. H. O'Brien introduced Grand Master W. H. Barnes, who made a short, but interesting speech. He spoke of the rapid growth of the Order in this State and called attention to the fact that it is but 48 months since California was declared a separate jurisdiction. He was followed by a male quartette, who rendered Zollner's "Toast" in such a pleasing manner that they were enthusiastically encored. John A. Britton next appeared on the stage, and took the audience by storm with a character recitation, in which he personated the Dutchman to perfection. After a double encore, he gave place to Miss Alice Dyer and Miss Lizzie Boyer, who sung "Hear Me, Norma," to the entire satisfaction of the audience. Weber's "Farewell to the Forest" was next given by a double quartette, of which Pacific Lodge may well be proud. Part second was opened by the orchestra, followed by a song by the favorite of the evening, J. A. Britton. A vocal solo by Miss Dyer was well rendered, after which the Master thanked the audience for their attendance, and promised that they should have the pleasure of attending more of these enjoyable gatherings in the near future. The evening's entertainment was closed by the double quartette, who sung Rossini's "Night Shades No Longer." The musicale was under the direction of Mr. N. L. Le Noir, the able organist of the Lodge.

An Anniversary.

In view of the great success attained by the A. O. U. W. on this coast, it seems meet that the date of its introduction here should not pass unnoticed. It was on the 21st of August, 1875 that Grand Recorder H. G. Pratt founded California No. 1, in Oakland.

Since that time how rapidly we have grown is shown by the number of Lodges and of members in the jurisdiction and the influence we have exercised.

It seems eminently proper that this date should be remembered with the round of the years. It would seem good for the members of the Order to recognize it in some way. If some of the leading members will think the matter over, no doubt they can arrange for celebrating the anniversary in a way which will cause it to be remembered. There is still plenty of time to perfect any necessary arrangements, and it is to be hoped the suggestion will not be unheeded. Everybody will help when once the movement is started.

OREGON AND WASHINGTON TERRITORY.—The Grand Lodge, A. O. U. W., for Oregon and Washington Territory met at Olympia Tuesday, July 11th, and elected the following officers: W. A. Child, Portland, G. M; C. M. Bradshaw, Port Townsend, G. F.; W. S. Wraight, Victoria, G. O.; Robert Newcomb, Portland, G. Rdr.; J. R. Moores, Salem, G. Rvr.; T. C. Taylor, G. G.; Chas. McDermott, Port Madison, G. W.; T. C. Van Eppe, Olympia; W. D. Hare, Hillsboro, and J. W. Chase, Astoria, Supreme Representatives.

RELIEF COMMITTEE.—The General Relief Committee, at its semi annual meeting, held on Saturday evening, July 8th, elected the following officers: E. M. Reading, of Fidelity, President; A. V. Thompson, of Noe Valley Lodge, Vice-President; C. C. Gilmore, of Myrtle Lodge, Secretary; G. Winehill, of Unity Lodge, Treasurer.

A MOVEMENT is on foot to form a new Lodge of Workmen in this city. We have assurances from prominent members of other Lodges that the material thus far selected is of the best. Those who are promoting it are scrutinizing the names presented very closely.

PARTIES, celebrations, anniversaries and Lodge visits among the Workmen of this city are increasing in number. Any one who is fortunate enough to procure invitations can attend a grand meeting every week-day night for the next 30 days.

NEW LODGE.—A new Lodge was organized by J. W. Kinsley, D. D. G. M. W., at Beaver, Utah, July 13th, to be known as Pacific, No. 7, having been named after Pacific, No. 7, of Oakland, Cal.

THE membership of the A. O. U. W. Lodges in this city on June 30th, 1882, was 4,521—an average of 196 to each Lodge. There are 23 Lodges.

Business Announcements.

Sewing Machines, A. J. Pommer, S. F.
San Francisco Plating Works, E. G. Denniston, Prop'r.
E. F. Wilton, Merchant Tailor, S. F.

FURNITURE.

H. Schellhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

IMPORTANT SEMI-TROPIC COLONY ENTERPRISE.

The Fairest and Best of Colonies.

THE REDLANDS,

In San Bernardino County, California.

Superior Soil, Climate and Irrigating Improvements.

The following information concerning one of the best-reputed and promising colony enterprises in southern California, is from the Riverside *Press*, of San Bernardino county, April 1, 1882:

A Model Settlement.

No place in California has sprung into public notice so rapidly and gained so deserved a reputation in so short a time as has the new tract of Redlands.

This tract is located between Old San Bernardino and Crafton on the south side of Mill Creek ditch and comprises 2,500 acres of as choice fruit lands as can be found in the State. The land is of a reddish clayey loam, not clayey enough to work hard, having sufficient admixture of sand to hold moisture and give the best results when planted to orchard or vineyard. The red lands of the State are everywhere celebrated as being superior for tree and vine.

The tract slopes to the northwest and commands one of the grandest views to be found in the State. To the north and northwest lies stretched out, several hundred feet below, the San Bernardino valley, with the towns of San Bernardino and Colton plainly in view, while, looking to the westward at night, the headlights of the Eastern-bound trains can be distinctly seen for 40 miles. Beyond the San Bernardino valley to the northwest, and stretching around to the northeast, the chain of mountains tower 9,000 ft. above the sea level, culminating in Mount San Bernardino, 11,000 ft. high, and Grayback, 11,550 ft. high, both of which stand up boldly from the Redlands point of view, and whose tops are covered with snow more than half of each year. Around to the left of the picture are the Cucamonga peaks, 40 miles distant, which complete the semi-circular mountain chain that makes such a beautiful background to the landscape. For mountain and valley scenery no more beautiful location can be found in the State than Redlands, outside of Yosemite valley.

Redlands is located 10 miles from the county seat, the same distance from Colton, and 15 miles from Riverside. The track of the Southern Pacific railroad runs one and a half miles from the center of the Redlands tract, and a depot will be established at once for the accommodation of Redlands, Lugonia, Crafton and Old San Bernardino.

The Redlands tract is laid off by running avenues from northeast to southwest, one-quarter of a mile apart and cross streets at right angles to those avenues every half mile, thus cutting the tract into blocks, each of which contains 80 acres. The avenues are each 100 ft. wide. The cross streets are 60 ft. wide.

Although the first work done on the tract by settlers could not be commenced till about the 1st of January, 1882, there are at the present time some 10 or 12 houses erected and in process of erection, with several to commence work soon. A number of tracts, in addition to those on which houses are being built, are being plowed up and planted to orchard and vineyard.

The lateness in the season when the land was bought by purchasers, prevented many from getting their land set out to trees or vines this year, but all who have purchased are making arrangements to plant extensively next winter and spring.

Town Plat.

Near the center of the tract is a town plat, consisting of 140 acres, cut up into lots ranging from an ordinary business lot to two and a half and five acre residence lots. Within this town plat, at the crossing of Palm and Center avenues, is a circular public park, with a fountain in the center. This park will be improved by the proprietors of the tract. Above the town plat will be constructed a small reservoir, from which iron pipes will be laid to supply the town with water under pressure.

The Water System.

Is one of the most perfect in the State. The water supply comes partially from the South Fork ditch of the Santa Ana river and partially from private water developments in the Santa Ana canyon and other localities. The waters are to be conducted to a large reservoir, located in a canyon adjoining the tract, and distributed from this reservoir by means of cement pipes. These pipes will be so laid as to carry the water without loss to the highest point on each ten-acre lot. The basis of water supply is one inch of water, statute measurement, to each eight acres of land. This is ample, and up to the best irrigated tracts in the State.

Work on the water system is being pushed as rapidly as men and money can do the work. The dam to the reservoir, which is ultimately to be 60 and perhaps 80 ft. high, is now about half done; the iron discharge pipes and watergates are in position, and nearly four miles of the largest distributing pipes are already manufactured, and most of this is laid. This portion of the work embraces the 8, 10, 12, and 14-inch pipes—the heaviest portion of the work. The smaller pipes, none of which will be less than four inches, will be made and laid as soon as the larger pipes are completed.

The orange, lemon, apricot, peach and raisin grape, will grow here to perfection.

Following is a list of the property owners at the present time. Those who have moved upon the tract are credited to Redlands, and the others to localities where they now reside:

Names.	Acres.
J. G. Cockshutt, Redlands	20
C. W. Kidder, Redlands	10

L. Jacobs, San Bernardino	24
Total sold	1,004

Judson & Brown (San Bernardino, P. O.), owners of the tract, are energetic men, who leave no stone unturned to make their enterprise a success. They do not try to figure how little they can do and sell their land, but where they can put another thousand dollars and make the tract more desirable to first-class settlers. There is nothing shoddy about their operations. Redlands will stand in a few years as one of the finest settlements on the Pacific coast.

Provisions.

Fillmore St. Cash Market,
C. KRAMER, - - - PROPRIETOR,
—ALL KINDS OF—
CHOICE MEATS, FISH and POULTRY.

All kinds of Foreign and Domestic at Lowest Rates, by the Sack or Quantity. Delivered by
MARK HEYWOOD,
716 Folsom St., San Francisco.

Mining and Scientific Press.

THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.
DEWEY & CO., Publishers.

The Royal Society of London.

We have only to turn over the pages of its transactions to discern how much this society has done for the progress of humanity. It was incorporated in 1662, and has interested itself in all the great scientific movements and discoveries that have since been made. It published Newton's "Principia;" it promoted Halley's voyage, the first scientific expedition undertaken by any government; it made experiments on the transfusion of blood, and accepted Harvey's discovery of the circulation. The encouragement it gave to inoculation led Queen Caroline to beg six condemned criminals for experiment, and then to submit her own children to that operation. Through its encouragement Bradley accomplished his great discovery, the aberration of the fixed stars, and that of the nutation of the earth's axis; to these two discoveries, Delambre says, we owe the exactness of modern astronomy. It promoted the improvement of the thermometer, the measure of temperature, and in Harrison's watch, the chronometer, the measure of time. Through it the Gregorian calendar was introduced into England, in 1752, against a violent religious opposition. Some of its members were pursued through the streets by an ignorant and infuriated mob, who believed it had robbed them of 11 days of their lives; it was found necessary to conceal the name of Father Walmesley, a learned Jesuit, who had taken a deep interest in the matter; and, Bradley happening to die during the commotion, it was declared that he had suffered a judgment from heaven for his crime.

If I were to attempt to do justice to the merits of this great society, I should have to devote many pages to such subjects as the achromatic telescope of Dollond; the dividing engine of Ramsden, which first gave precision to astronomical observations; the measurement of a degree on the earth's surface by Mason and Dixon; the expeditions of Cook, in connection with the transit of Venus; his circumnavigation of the earth; his proof that scurvy, the curse of a long sea voyage, may be avoided by the use of vegetable substances; the polar expeditions; the determination of the density of the earth by Maskelyne's experiments at Schehallion, and by those of Cavendish.—*Prof. Draper.*

The Wonders of an Atom.

All things visible around us are aggregations of atoms. From particles of dust, which under the microscope could scarcely be distinguished one from the other, are all the varied forms of nature created. This grain of dust, this particle of sand, has strange properties and powers. Science has discovered some, but still more truths are hidden within this irregular molecule of matter which we now survey, than even philosophy dares dream of. How strangely it obeys the impulses of heat—mysterious are the influences of light upon it—electricity wonderfully excites it—and still more curious is the manner in which it obeys the magic of chemical force.

These are phenomena which we have seen; we know them and we can reproduce them at our pleasure. We have advanced a little way into the secrets of nature, and from the spot we have gained we look forward with a vision somewhat brightened by our task; but we discover so much yet unknown, that we learn another truth—our vast ignorance of many things relating to this little grain of dust. It gathers around itself still other particles; they cling together, and each acting upon every other one, and all of them arranging themselves around the little center, according to some law, a beautiful crystal results, the geometric perfection of its form being a source of admiration. It quickens with yet undiscovered energies; it moves with life; dust and vital force combine; blood and bone, nerve and muscle result from the combination. Forces which we cannot, by the utmost refinements of our philosophy, object, direct the whole, and from the same dust which formed the rock and grew in the tree, is produced a living and a breathing thing, capable of receiving a divine illumination, of hearing in its new state the gladness and glory of a soul.

THE BEST FOODS.—Wholesome, nutricious foods—those that supply the system most readily with what is required to give it vigor and endurance—are those foods that are cheapest and most generally distributed over the earth. These are the cereals and other direct products of vegetation. There is as much nutriment in one pound of beans, wheat or rice as there is in three pounds of beef, mutton or poultry.

Boots and Shoes.

Greatest Invention of the Age in the Shoe Line.

P. KELLY'S

PATENT

Boot and Shoe Combined,

Patented June 22, 1880.)

ADVANTAGES:

1. Does not bind around the ankle like the old style Congress Gaite..

2. The elastic, being placed back of the ankle bone, is protected from wear. 3 Sits and looks on the foot like a tongue boot. 4. Easy to put on and off. 5. Handsome on the foot.

P. KELLY.

Patentee and Prize Boot Maker, and dealer in and Manufacturer of Ladies and Gents' Fine Boots and Shoes 238 Kearny St., cor. Bush.

ANDERSON'S SPRINGS,

LAKE COUNTY, CAL.

Nineteen miles from Calistoga, Napa county. Five miles from Middleton, and ten miles from the GREAT GEYSERS, between which and Anderson Springs, there are good Wagon Roads.

Hot Sulphur and Steam Baths

For the Cure of Rheumatism, Paralysis, St. Vitus' Dance, Dropsy, Etc. Cold Sulphur for Dyspepsia. Diseases of the Stomach and Kidneys.

Scenery Unsurpassed. Climate Mild and Equable.

Consumptives generally improved in health, and asthmatics are invariably relieved. Trout Fishing in the grounds. Deer hunting in the immediate vicinity. New Cottages for the better accommodation of guests. Cooking good.

IMPORTANT RECOMMENDATIONS.

Remarkable Cure of Dropsy.

VALLEJO, June, 1882.

I suffered intensely with dropsy, and was induced by Mr. Edgecomb to try Anderson's Springs, he having been cured there, after undergoing frightful agonies, being tapped three times before he reached there; and I am deeply grateful for taking his advice, for such a beneficial effect had the Springs on me, that I am now entirely cured, and advise all who may be suffering to try Anderson's Springs. KATE MACKAY.

Sight Restored.

A candid and well-known gentlemen of San Francisco certifies briefly as follows:

May 31, 1882.

"I was cured of inflammation of the eyes at Anderson's Springs, Lake county." M. J. DURNEY, 425 Brannan St., S.F.

Many other cases of Dropsy and Paralysis, Rheumatism, Swelling of Limbs, and various other obstinate cases of chronic diseases have been cured from year to year, at the above-named springs, which are located in Lake county, 19 miles from Calistoga. Special regard is paid to the diet of guests, who are liberally furnished with good home cooking, etc Send for further information. Address

ANDERSON & PATRIQUIN,

Anderson's Springs, Lake Co, - via Calistoga, Cal.

A Song of Nature.

By the gurgling stream as it winds along
On its way to the valley below,
It sounds in my ears like a long lost song
Of childhood's sweet day, long ago.

The smooth worn bowlders, like long-lost friends,
Familiar in times long past,
Stand forth to my view and with my vision blend,
And my youth seems again in my grasp.

Like life's blood a dancing through eager young veins,
The water runs rapidly past,
Portraying this life, with its joys and pains;
Returning, no, never, a'as!

But here, by this stream, is a treasure more rare,
That will heal all diseases and pain,
Even fountains of life-giving water are there,
Not supplied by the winds nor the rain.

But dear mother earth, from her bosom supplies
These springs that were hid from our sight;
They strengthen our heart and open our eyes,
And fill us with youthful delight.

And even the rocks at this wonderful spot
Breathe soft on our bruises and pain,
Their medical vapor, exceedingly hot,
And this bathing is never in vain.

These waters of life and this medical breath,
Are free to the great and the small,
At Anderson's Springs, saving from death
The blind, halt and maimed, one and all.

Unto God be all praise who created the earth
With these blessings so rich unto men,
Who even now slowly are finding their worth,
And do bless Him in return again.

—W. A CLARK

Poultry and Stock Book A complete manual and reference book on all subjects connected with successful Poultry and Stock raising on the Pacific Coast. A New Edition, over 100 pages, profusely illustrated, with handsome, life-like illustrations of the different varieties of poultry and live stock. Price by mail, 50 cents. OFFICERS OF GRAND LODGE.

E. N. ROBINSON, P. G. M.... .....Eureka.
J. V. MCCURDY,

Changes in Supreme Lodge Constitution.

At the last session of the Supreme Lodge the following changes in its Constitution were made:

Voting.

Amend Section 2, Article IV, to read as follows:

SEC. 2 (sub-section 2). Each member of the Supreme Lodge has one vote only, and each Grand Lodge, in addition, shall be entitled to one vote for each 1,000 members under its jurisdiction, as shown by its last official return to the Supreme Lodge, and for any fraction of a thousand over 500, one additional vote; this shall be the ratio of voting in all elections, and also when such a vote shall be demanded by five members. All other matters shall be determined by a majority of the members present, and, in case of a tie, the presiding officer gives the casting vote.

The Supreme Recorder shall, at the opening of the Supreme Lodge, prepare a roll of the members and affix the number of votes to which each is entitled.

Beneficiary Article.

Amend Section 3, Article VI, to read as follows:

SEC. 3. Each Grand Lodge, so set apart as a beneficiary jurisdiction, shall manage within itself the beneficiary department, assessing, collecting and disbursing the beneficiary fund, in accordance with, and governed by the general laws and usages prescribed by the Supreme Lodge to subordinate Lodges under its immediate jurisdiction, and no alteration or amendment to such laws or usages shall be made except by the Supreme Lodge. Provided, however, that Grand Lodges so set apart may make such alterations or changes in their general laws and usages not contravening the fundamental principles thereof, as may from time to time be adopted by a two-thirds vote of the Grand Lodge, and as shall thereafter be approved by the Supreme Lodge in session, or by its Committee on Laws and Supervision and Supreme Master Workman during the recess of the Supreme Lodge, attention being called especially to the changes or alterations proposed.

Amend Section 10, Article VIII, to read as follows:

SEC. 10. Any beneficiary certificate suspended by reason of non-payment of assessments thereon, may be renewed, if the member be living, at any time within a period of three months from the date of such suspension, upon the following conditions, and none other, that is to say: 1. All assessments that have been made during that time shall be paid. 2. This fact shall be reported to the Lodge at a stated meeting; and 3. The Lodge shall, by a majority vote, declare said certificate renewed. When all these conditions have been complied with, the beneficiary certificate shall be held as renewed and in full force, and not before.

Amend Section 11, Article VIII, to read as follows:

SEC. 11. Any member in arrears on beneficiary assessments for a term exceeding three months, must again be examined by the Medical Examiner of the Lodge, whose report shall be in manner and form as prescribed by the Supreme Lodge, and shall recommend the applicant for membership. He shall pay all assessments for which he would have been liable had he remained in good standing. He may then be reinstated to membership, and his beneficiary certificate be renewed; provided, that by a vote a majority of the Lodge consent thereto. If the application for renewal be approved, the Medical Examiner's report, together with notice of renewal of his beneficiary certificate, shall be forwarded to the Supreme Recorder; if rejected, the amount deposited for renewal shall be returned to the applicant. Provided, that when the beneficiary certificates of an entire Lodge have been suspended under the provisions of Section 8 of this Article, and when the same have remained suspended for the space of three months from and after the date of said suspension, it shall be the duty of the Supreme Master Workman to suspend the Charter of said Lodge, and should the members thereof desire to be reinstated at any time within the period of six months from the date when their beneficiary certificates were suspended, they must obtain the consent of the Supreme Master Workman thereto, and must comply with the provisions of Section 13 of this Article.

Amend Section 3, Article IX, to read as follows:

SEC. 3. The following maximum annual rate of assessments is established for the several jurisdictions of the Order, that is to say: Iowa, 22; Michigan, 22; Minnesota and Dakota Territory, 22; Maryland, New Jersey and Delaware, 24; Wisconsin, 22; Ontario, 22; Kansas, 22; California, 24; New England States, 24; Illinois, 24; Indiana, 28; New York, 24, Pennsylvania, 24; Oregon and Washington, 24; Nevada, Utah, Idaho, Montana and Wyoming, 22; Missouri and Nebraska, 26; Georgia, Alabama, Florida, Mississippi, North Carolina and South Carolina, 28; District of Columbia, 28; Kentucky, 28; Ohio, 28; Tennessee, 28; Virginia and West Virginia, 26; Supreme Jurisdiction, 24; Texas and Louisiana, 28; Colorado, Arizona and New Mexico, 28.

The maximum rate for other jurisdictions, which may, from time to time, be established, shall be fixed by the Supreme Lodge or the Supreme Lodge Relief Board, herein provided for, as such jurisdictions may be established.

Medical Examinations.

Amend Section 1, Article X, to read as follows:

SEC. 1. At each regular session of this Supreme Lodge, there shall be elected a "Supreme Medical Examiner," who shall be a competent practicing physician, a member of this Order, and a graduate of some reputable school of medicine. Said Supreme Medical Examiner may, for cause, be at any time removed, and a successor appointed.

Amend Section 3, Article X, to read as follows:

SEC. 3. Each Grand Lodge shall be required to elect or appoint at each annual session a Grand Medical Examiner (or Board of Medical Examiners), who shall be competent practicing physicians, who shall be required to file with the Grand Recorder evidence of their authority to practice medicine, by whom all Medical Examiners' certificates must be approved before the degrees can be conferred upon the applicant. Provided, however, that the compensation of, and by whom to be paid to, said Grand Examiner shall be fixed by the several Grand Lodges. Provided, further, that, upon the institution of new Lodges, degrees may be conferred and the Lodge instituted, but no beneficiary certificate shall be issued, nor shall any liability be incurred until such medical examinations and applications shall have been submitted to, and approved by, said Supreme or Grand Medical Examiners or Board of Medical Examiners.

Amend Section 5, Article X, to read as follows:

SEC 5. All certificates of medical examination for membership in this jurisdiction shall, as soon as approved and signed by the proper Lodge committee, or instituting officer, be forwarded, with the prescribed fee of 50 cents from the fees advanced by the applicant, to the Supreme Medical Examiner, who shall, if the credential certificates of examining physicians, prescribed in Section 3 of this Article, be on file in his office on the day of their receipt, pass upon and return the same, if approved, to the Lodge forwarding. The Supreme Recorder shall furnish a blank form of credential certificate, and keep a record of all credential certificates filed in his office.

Add Section 6, Article X, to read as follows:

SEC. 6. Whenever the Supreme or Grand Medical Examiner or Board of Medical Examiners shall disapprove the examination of an applicant, they shall place the same on file in his or their office, and notify the Lodge forwarding the same of the action thereon.

Suggestions for Medical Examination.

The following suggestions, made by Supreme Medical Examiner Richardson, in his annual report, were endorsed by the Supreme Lodge, and special attention is hereby called to the same:

With the experience of the Supreme and several Grand Lodges under our system of examination and supervision during the short time it has been in force, it appears evident that much good has been accomplished. I believe the law to be capable of attaining the full beneficial results that were anticipated for it only when it is more fully understood and enforced. What is needed is more attention to the details of the work on the part of the several Grand Examiners. Let them look after and watch their Subordinate Examiners with the same persistency that Grand Recorders do their subordinates, and we shall have the same results. Numbers of applications in the Lodges under my supervision have had to be sent back for completion and definite answers to leading questions on the blank. This lack of attention to exact duty has been complained of by every Grand Medical Examiner in the country. Lodge Examiners might save much annoyance and delay if they would be careful to answer *every* question concisely. In making rejections on account of habits, it is hard to draw the line between moderation and intemperance in the use of malt and distilled liquors. I have drawn it on the habitual daily drinker. A man who drinks liquors as a beverage daily or habitually, if not actually intemperate in the ordinary meaning of the word, is at least putting such a trammel on the physiological functions of his system as to render him a hazardous risk in an insurance sense. In my opinion the most necessary thing to be done is for the Supreme and several Grand Medical Examiners to keep up a more close and scrutinizing relationship with the Subordinate Examiners in the following particulars:

1. See to it that none but honest, competent and qualified men shall be placed in the position of Subordnate Examiners.

2. Keep the Lodge Examiner posted by furnishing him printed instructions, circulars, reports, papers, etc., bearing on his duties. By this means an interest in the duties pertaining to the position will be created.

3. Permit no carelessness on the part of Lodge Examiners. Let them understand that any omission or neglect in making an examination or filling a blank will not be tolerated.

4. Encourage confidential communications from Subordinate to Grand Medical Examiners relative to candidates whom the Subordinate Examiner does not desire to openly reject.

5. Establish and enforce more stringent rules relative to the admission of candidates whose family history shows a record of consumption, or whose personal history or habits demonstrate a tendency to disease or intemperance.

HIGHLAND SPRINGS.—This old and popular resort in Lake county, has been largely patronized this season, under the new and skilful management of Dr. C. M. Bates, of San Francisco. Its guests have included an unusual number of leading and well-known citizens. All seem well pleased with their sojourn at the springs, beautifully located, as they are, in a remarkably healthy climate. Those intending to go into the country, for health or pleasure, will find some facts and information worth noticing, concerning these springs, in our advertising columns.

PACIFIC GROVE RETREAT.—One of the most successful enterprises and grand achievements for the over worked people of California is the establishment of the elysium at Pacific Grove Retreat at Monterey. The Pacific Improvement Co., under the guidance of master hands, has made this retreat of nature the great attraction of the Pacific coast. The safety, comfort and elegance of the S. P. R. R. cars, and the protection to the families in this health resort, has established one fact for California, viz.: That the pine groves of Monterey, nestled by the side of the sea, will be the chief summer and winter resort for invalids, tourists and families for the Pacific coast.

WE were recently shown the "Perfect Rest Chair," and "Patent Indianapolis Sofa Bed," at the large wareroomr, 160 New Montgomery street, which seem to be the acme of perfection. Bro. F. Rantchler, of this firm, called our attention to a new and beautiful design in parlor and bed-room sets. Their line of furniture and carpets are very full and complete at present, and are sold at bottom price.

BROS. ARMSTRONG, DE REMEE & CO, No. 121 Jackson, between Davis and Drumm streets, are agents for a first-class line of steamships, and will procure passage and accommodation to emigrants from any part of the continent at the lowest rates. This is a well-known and reliable firm.

IT is said that the dress oft times proclaims the man. In this connection, any wishing a nobby suit in the latest style, can have it by going to Bro. E. F. Wilton, No. 12 Stockton street. His reputation as a cutter and fitter of pantaloons is second to none in San Francisco.

HAVING had the pleasure of dropping in at Weston's, No. 9, Stockton St., the other day, at 12 o'clock, we had a fine opportunity of tasting his fresh home-made bread, and lost no time in availing ourselves of it. It is undoubtedly excellent, and without a rival.

BRO. C. E. PEARSON, proprietor of Swain's family bakery and dining saloon, 636 Market street, opposite the Palace hotel, has one of the chief resorts for the elite of this city. He makes a specialty of furnishing wedding cakes, ice cream, etc., to order, for families or parties.

IF any of our readers should wish to buy, rent, exchange or have their sewing machines repaired, they will do well to call on Bro. A. J. Pommer, 151 Fourth street.

FRANK P. LATSON & CO., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery Street, under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc, and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

G. W. MCGREW—Santa Clara county.
M P OWEN—Santa Cruz county.
J. W. A. WRIGHT—Merced, Tulare and Kern counties.
JARED C. HOAG—California.
B. W. CROWELL—San Luis Obispo and Santa Barbara counties..

MANSION HOUSE. First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.
J. H. CROSS, Proprietor.

HOW TO STOP THIS PAPER.—It is not a herculean task to stop this paper. Notify the publishers by *letter*. If it comes beyond the time desired, you can depend upon it we do not know that the subscriber wants it stopped. So be sure and send us notice by *letter*.

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in DEWEY & Co.'s SCIENTIFIC PRESS PATENT AGENCY, 252 Market St., S. F.

FOR THE WEEK ENDING JULY 11, 1882

260,848. NUT LOCK—Philip Curran, Caliente, Cal.
260,847.—LEATHER CREASER—Charles H. Corey, San Jose, Cal.
260,863.—SEWING MACHINE FOR MAKING BOTTLE COVERS—George Grisel, S. F.
260,980.—TWO-WHEEL VEHICLE—Henry Hortop, Rutherford, Cal.
260,837.—VELOCIPEDE—William B. Morris, S. F.
260,889.—GRAIN-ADJUSTING FELT FOR HARVESTERS—S. T. Northcott, Marion Co., Oregon.
261,101.—SAFETY DEVICE FOR ELEVATORS—C. C. Palmer, Oakland, Cal
261,035.—HEATER AND BASE FOR DRIERS—W. S. Plummer, San Jose, Cal.
261,036. DRYING CHAMBER FOR FRUIT EVAPORATORS—W. S. Plummer, San Jose, Cal.
260,786.—EXPLOSIVE POWDER—William R Quinan, S. F.
261,044.—METAL DRILLING MACHINE—John Richards, S. F.
261,060.—SPRING BOTTOM OIL CAN—Z. St. Pierre, Bullionville, Nev.
260,913.—WATER WHEEL—Rufus W. Tufts, Santa Cruz, Cal
261,079.—HORSE DETACHER—J. H Clow, Sheridan, Or.
260,882.—HEADER—M. N. Laufenburg, S. F., Cal.

FOR THE WEEK ENDING JULY 18, 1882

261,426.—BRAKE AND STARTER FOR STREET CARS—R. F. Bridwell, S. F.
261,206.—BALANCE SLIDE VALVES—John B. Conrad, Portland, Oregon.
261,434.—DEVICE FOR REMOVING SNOW AS IT FALLS UPON AND CONTIGUOUS TO RAILWAY TRACKS—L. D Craig, S. F.
261,332.—CHAIR BRACE—John A. Gallagher, Chinese Camp, Cal.
261,340.—WATCH OILER AND HOLDER—F. Gundorph, Portland, Oregon.
261,156.—SOAP TABLET—W. J. Houston, S. F.
261,439.—HOE—Lou Hu Fan, S. F.

Improved Mining Gear for Mines.

Important improvements have been introduced by Mr. John Craven, of Wakefield, England, in the form and arrangement of winding gear for mines, the improvement consisting mainly in obviating the necessity of coiling ropes round the drums usually employed, and so removing the danger and expense arising from the great wear and frequent injury of the ropes by one coil chafing against the other. In order to effect these objects, the inventor employs a single winding rope, an upper set of grooved headgear pulleys, and a lower set of grooved winding pulleys, each consisting of two pulleys and an intermediate grooved pulley between the two sets. The rope is attached at one end to one of the cages, passes over one of the headgear pulleys, under one of the winding pulleys (to which the motive power is applied), and back over the intermediate pulley, and then under the other winding pulley, and thence over the other headgear to the other cage, to which the end of the rope is attached. This arrangement is designed to give greater durability to the rope, and to obviate all tendency to slipping, as in proportion as the weight of the load is increased the adhesion of the rope is augmented. The bearings of the intermediate pulley may be carried in a movable frame, either inclined or otherwise, so as to admit of the pulley being adjusted as required, in order to maintain the rope taut.

The following specific advantages are claimed for the invention: No chafing of rope as in the ordinary system of drum, so that the ropes last longer; reduction of work for the engine to do in starting; reduction of strain upon the engine, etc., in stopping; speed, instead of being obtained by a large diameter of drum, is got from the engine running quickly; a smaller engine is required than with ordinary gear, owing to the comparative lightness of the winding pulley; the winding pulleys have only one groove each, and are of very small weight, comparatively; saving in first cost, the engine-house being much narrower, and only one rope required instead of two; great adhesion, no slip occurring between the rope and the pulleys.

A NEW WATER ELEVATOR.—Among the many interesting exhibits at the recent Naval and Submarine exhibition, in England, was a new water elevator, by means of which, it is stated, from 300 to 375 gallons of water can be raised per minute, the consumption of fuel being from 8 to 10 cwt. of slack per day, and the discharge pipe being six inches in diameter. The apparatus consists of a cylindrical chamber furnished at the lower end with inlet and outlet valves for water, and at the upper end with an inlet valve for air, while, in addition, there is a small steam valve which is opened periodically for a brief interval by a rotating cam driven in any convenient way. It is filled by gravity, and, when steam is admitted, the inclosed water is forced through the delivery pipe. Partial condensation of the steam then takes place, and a fresh charge of water is taken in, while, at the same time, air enters through the air-inlet valve, the air so admitted appearing to form a kind of cushion between the water and the steam, and appearing to prevent condensation of the latter during the greater part of the delivery stroke. The entire arrangement is characterized by great simplicity, and further improvements which, it is said, will shortly be made, will render the apparatus still more economical and efficient.

REMEDY FOR SUNBURN.—Bruise and then squeeze out the juice from the stalks and leaves of the common chickweed, and add to it three times as much rain-water. Bathe the skin with this for a few minutes morning, noon and night, and wash it off with pure water. Elder flowers can be similarly treated and applied, or they can be steeped in milk and the face and hands washed in it. Sour cream applied at night and washed off in the morning will allay smarting sunburn.

The Mechanic Arts.

The mechanic arts—particularly in the United States, where they are most diffused and all but universal—appear to contribute more directly than any others to the general comfort and improvement of the people. All others are dependent upon them for the principal agents and instruments of their success. They are scarcely more subservient to the primary wants of mankind than to the higher ministrations of taste and refinement. The acquisition and diffusion of knowledge, the means of intercommunication and transportation, the comforts, enjoyments and security of the fireside, and even the honor and integrity of the nation itself, are dependent upon the skill and enterprise of the manufacturer and the mechanic; but the results of their labor are, from their nature, less obtrusive or obvious to the general apprehension than some others. The annual movements of our immense crops of grain, cotton and other bulky staples, are easily appreciated. The pulsations of commerce may be counted by a superficial observer, in the arrival and departure of ships, and upon the records of the Custom House and the Exchange; but in the hands of the manufacturer, a modicum of crude material undergoes a process of division, transformation and elaboration, and then silently and unobtrusively disappears—diminished in bulk, but augmented, it may be, many hundred-fold in value—in the ordinary channels of distribution, where it is often undistinguished from its foreign rival. It is only when the nation takes account of stock that any approximate idea is obtained of the value of this item in the general account.

And who can justly estimate the influence upon the general happiness and prosperity—upon the progress in civilization of the sum total of effective labor, capital and skill represented in the development of the mechanic arts in this country? What an amount of fixed capital—of labor, enterprise, ingenuity; of resources, material and immaterial—is there involved in the manufactures of a single year? The increased support given to agriculture, commerce and the mining interests of the consumption of hundreds of millions of dollars' worth of raw material, and to hundreds of thousands of men, women and children, who would have been otherwise unemployed, or forced into competition with the farmer and planter, instead of being consumers of their produce, form but a part of the benefits conferred upon the community at large. The independence and security contributed by manufacturers and mechanics, whether of supply or defense, to a nation, cannot be overestimated.

It is a gratifying fact, shown by the official statistics, that while our older communities have greatly extended their manufactures, the younger and more purely agricultural States, even the newest Territories, have also made rapid progress. Nor has this department of American industry been cultivated at the expense of any other. There is much reason to believe that it affords the safest guaranty of the permanency and success of every other branch. Evidence bearing upon this point is found in the manufacture of agricultural machines and implements, which is an industry that annually enlarges its operations. There is little doubt that the province of manufactures and invention has been rather to create than to follow the demand. The promptness of Americans to adopt labor-saving appliances, and the vast areas devoted to grain and other staples in the United States, have developed the mechanics of agriculture to an extent and perfection elsewhere unequalled. The adoption of machinery to the extent now common in farm and plantation labor furnishes the best assurance that the development of agriculture or manufactures to their utmost can never again justify the old charge of antagonism between them in regard to labor, or injuriously affect either by modifying its cost or supply.—*The Economist.*

INSTANTANEOUS FORMATION OF STEAM.—Messrs. Serpollet, Freres & Co., of Paris, have patented an invention for the instantaneous formation of steam, which permits of its use at once in the cylinder of the engine. A pump sends the required quantity of liquid between two plate surfaces, which are heated, and between which there is only a capillary space. The liquid spreading in a thin layer evaporates at once, without going into the so-called spheroidal state; and this steam acts in the cylinder as fresh formed steam. The speed of the pump is regulated by the engine, the pump being connected with the shaft of the engine.

1882. SUMMER SEASON. 1882.

The undersigned takes pleasure in announcing that, encouraged by the success of last year in conducting the Pacific Grove Retreat Grounds, and realizing the pleasure it affords to its patrons, the Pacific Improvement Company has decided to continue this popular resort.

Illustrated "Folders,"

Giving full Information in Relation to the Grove, Route to Monterey, Accommodations at the Grove, the Stores and Stables, Religious Services, Chautauqua Circle, the Moral and Prudential Management, Sea Bathing and Boating, Lots for Building Residences or for Tenting Purposes, Etc.

Can be obtained from MR. J. O. JOHNSON, Superintendent Pacific Grove, Monterey, or from any STATION AGENT on the lines of the Central or Southern Pacific Railroads.

Respectfully, **R. P. HAMMOND, Jr.,**
Agent Pacific Improvement Co., Monterey, Cal.

DEWEY & CO.'S

Scientific Press

Patent Agency.

(ESTABLISHED 1860.)

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

A Curious Aquatic Bird.

Our engraving gives a view of a curious aquatic bird, which launches its nest upon the water, and, it is said, practices the navigator's art, propelling its nest when danger threatens. It is such a performance which the artist has portrayed, the bird pushing off its nest preparing to alight upon it, very much as a man would shove off a boat and jump into it. Whether the artist has drawn upon his observation or imagination in putting the bird into just the position it occupies, we are not sure, but it is a fact that there are birds with floating nests, and we shall draw from good authorities in giving a brief account of them.

Dr. Coes, in his "Birds of the Northwest," describes the American eared grebe (*Podiceps Californicus*). He says:

I first saw the species alive in southern California, where I found it to be very common, both on the waters of the bay of San Pedro and in the sloughs back of the coast. They were, of course, in immature dress, the season being November. During the past year I was pleased to find the birds breeding, in pools about Turtle mountain, with various other water-fowl. This is apparently the northeasternmost point at which the species has been observed. Visiting this locality in July, I was too late for eggs, for the young were already swimming, and, in most cases, fledged. The birds were very common, rather more so than the horned grebe, with which they were associated. Many specimens were secured in their full nuptial dress. The change begins in August, but it is not completed until well into the following month, as traces of the breeding plumage persist several weeks after it has grown faded and obscure. On the breeding grounds, as just said, the eared grebes were more plentiful than the horned, since a majority of the latter breed farther north; but upon the migration, when these come south, the proportion is reversed. Both species were to be seen together upon all the water courses of northern Dakota when I left the country in the middle of October. I saw nothing notably different in their general habits.

Other observers have found the eared grebe in full dress, and nesting, in various of our Western Territories, demonstrating a very general breeding range. Mr. Henshaw has lately taken the eggs in southern Colorado. He informs us that he found them, in the absence of parents, completely covered over and concealed in reedy material, so that they were discovered by mere accident. The following is his article by the "American Naturalist:"

"In a series of alkali lakes about 30 miles northwest of Fort Garland, southern Colorado, I found this species common and breeding. A colony of perhaps a dozen pairs had established themselves in a small pond four or five acres in extent. In the middle of this, in a bed of reeds, were found upward of a dozen nests. These, in each case, merely consisted of a slightly hollowed pile of decaying weeds and rushes, four or five inches in diameter, and scarcely raised above the surface of the water upon which they floated. In a number of instances, they were but a few feet distant from the nests of the coot (*Fulica americana*), which abounded. Every grebe's nest discovered contained three eggs, which, in most instances, were fresh, but in some nests were considerably advanced. These vary but little in shape, are considerably elongated, one end being slightly more pointed than the other. The color is a faint yellowish white, usually much stained from contact with the nest. The texture is generally quite smooth; in some instances, roughened by a chalky deposit. The eggs were wholly concealed from view by a pile of weeds and other vegetable material laid across. That they were thus carefully covered merely for concealment I cannot think, since, in the isolated position in which these nests are usually found, the bird has no enemy against which such precaution would avail. On first approaching the locality, the grebes all congregated at the farther end of the pond, and shortly betook themselves through an opening to the neighboring slough; nor, so far as I could ascertain, did they again approach the nests during my stay of three days. Is it not, then, possible that they are more or less dependent for the hatching of their eggs upon the artificial heat induced by the decaying vegetable substances of which the nests are wholly composed?"

THE GREBE AND ITS FLOATING NESTS.

DISTRICT MEETINGS.—District meetings will be held as follows: Keystone Lodge, Oakland, Tuesday, 15th inst.; San Rafael, Thursday, 17th inst.; Harmony, No. 9, S. F., 19th inst.; California, No. 1, West Oakland—anniversary celebration—Monday, 21st. The Grand Master and a number of the Grand officers will be in attendance at each of these meetings, and it is believed a crowded Lodge-room will greet them everywhere.

IVY LODGE, D. of H., will be pleased to receive visitors on the third Thursday of each month, at A. O. U. W. hall, Twelfth and Franklin streets, Oakland.

Society Frauds.

This abnormal and repulsive creature, though rarely met with, is none the less to be despised on this account, and deserves not only to be condemned for deceit, but also for actual stealing. By a "society fraud," we mean an unprincipled person that seeks to live off of sick benefits, more or less, and his chief aim in joining a fraternal society is this intention. In order to make good wages he has only to feign sickness for a short time, when the Visiting Committee calls to sympathize with him, and all goes swimmingly till he is suspected, which is not often long. Such a one may be termed a leech, and deserves that his name should become a hissing byword in the community. All honest men should shun him, and what fire can sere like the scorn of honest men? That we have at least one such individual in our midst is a well-established fact. If there are others, and we hope not, we have not heard of them, but at any rate it would be well for all societies to be on their guard for this one, as this is not his first field of operations.

POINT OF TIMBER LODGE, No. 92, has sustained the loss of its books and papers by a recent fire in that place.

OLIVER LODGE, No. 220, is the last, at Middletown, Lake county.

Lead Poisoning.

Few people, with the exception of those who are brought into immediate contact with the metal, by reason of their employment in base metal mines, smelting furnaces or painters' materials, have any idea of the horrors or results of lead poisoning. It is not alone the immediate danger to life, nor the pain and debility produced by this disease which are its most unpleasant features. Probably the most awful result to be contemplated by those unfortunates whose blood has been impregnated with this poison is, that the disease is inherited by their children, in the same manner as some others of the most terrible diseases known to the human race. It is still a mooted question whether the poison remains in the system of children so inheriting; but the fact remains, that the children born of parents who are so poisoned, come into the world covered with boils and ulcers, and in many cases die immediately after birth; and the burden of proof goes to show that the poison remains in the blood indefinitely, appearing on the surface in the form of eruptions, periodically.

The first symptom of lead poisoning is a severe colic, followed by debility, and a whitening of the skin. Other symptoms of the presence of lead poison in the blood are dizziness in the morning, with failing sight, and an increasing deafness, very much the same symptoms as appear when the liver is out of order. Persons suffering from this poison are very liable to have the slightest cold turn into pneumonia, as it weakens the lungs, and leaves them an easy prey to that terrible disease.

When persons are attacked very severely by lead poisoning they of course take it in hand, and by the use of a milk diet, and bathing in and drinking mineral water which is strongly impregnated with sulphur and carbolic acid gas, and by a general tonic treatment, they eliminate the poison from the system; but where the attack is slight, in many cases, very little attention is paid to it, and, in time, it becomes chronic, and results in years of misery, which is attributed to any other than the right cause. Of course, the poisoning very often proves fatal, but we are merely dealing now with the ills that accrue to the living. It is much easier than is popularly supposed to be placed in danger of lead poisoning. It is not necessary to work in lead mines, over smelting furnaces, or in mixing the paint known as white lead, to contract this disease. The fumes coming from the chimneys of smelting furnaces, breathed by persons on the street, are liable to cause lead poisoning; the drinking of water which has lain in lead pipe for a short time, salts of lead produced from the lead lining of tea chests, where moisture reaches the tea; and, in fact, in every article of consumption which is brought into contact with lead, in any way, where there is the least fermentation or moisture, there is great danger of lead poisoning.

In Germany a movement is on foot looking to the passing of a law prohibiting the importation of tea in lead-lined boxes, and this brings us to a danger which is little appreciated—the danger of lead-poisoning from drinking tea which has been imported in lead-lined boxes. The lead is used to preserve the flavor and aroma of the tea, which would be lost were the air allowed to reach it, but while it has the desired effect of preserving the flavor and aroma, it creates a danger of lead-poisoning; and it is a thing to be noticed, in this connection, that women, who are the principal tea drinkers, suffer very much from symptoms such as would be produced by lead poison, such as colic, debility, swimming in the head and a whitening of the skin.

Many merchants in America, being aware of the danger of so lining tea boxes have substituted tin for the lead, and where these tea cans can be put together without the use of solder, they would have the effect of holding the flavor and aroma of the tea, without the danger which comes from the use of lead.

This matter of lead poisoning has not received sufficient attention from either the people or the law-makers in this country, and some people even consider it is time a law was passed prohibiting the use of solder in putting up canned goods.

Home Miscellany.

Reformed.

You have reformed! And are you, then,
Much better than all other men,
That you so quickly come,
Thus boldly, seeking for the hand
Of her, the fairest of my band,
To make for you a home?

You have reformed! And does that make
You better for the very sake
Of reformation's need:
Are simple words security:
Are you the peer of purity
And innocence indeed:

Let's glance just once adown thy past,
And view the record there made fast
In time's unerring book;
Turn ope the leaves and we'll look in,
And see the record of thy sin—
Dost hesitate to look?

Now, in thy record here we find
The traces of an impure mind,
Trailed through each common sin;
The curse of drink is o'er the whole,
Hath left its impress on thy soul,
And in thy heart hath been.

And blighted hopes and joys are cast
Along the record of thy past,
From youth to manhood's age;
And deeds a man should blush to own,
Along thy whole career are sown—
Disfigure every page.

And yet you dare to ask for her,
Whose acts are now and always were,
Since I did give her birth,
As pure as virgin flakes of snow,
That fall from heaven to us below,
Before they touch the earth.

You have reformed! I pray you tell
How long since you have stood so well
By reformation's light!
Go, sir, and wait until you've made
A record whose foundation's laid
Upon long years of right.

And when thy past can show clean leaves,
And right deeds bound in goodly sheaves,
And when futurity
Holds hopes for noble acts to come,
Then seek for one to make thy home,
Whose life is purity.

—*Lillian Lake, in Western Rural.*

House Cleaning.

"Saidee! Saidee! Where are you! Why don't you answer me when I call you?"

"Yes, Aunt Leah—I am coming in a minute."

"In a minute," sarcastically repeated the old lady. "It's always 'in a minute' with you, Saidee! But, I suppose, because I'm old and helpless, my comfort is a matter of no consequence whatever."

"Dear Aunt, Leah, you must not think that!" answered a bright, cherry voice; and Saidee Lynn came into the room with a little tray, where was arranged on a snowy napkin, some tea-biscuits, half a dozen pink radishes, a few thin cut shavings of smoked beef, and a little pot of tea, with a cup and saucer of old blue China which would have been invaluable to a collector. "You see I had you on my mind all the time, Aunt Leah," she said, merrily. "I gathered the radishes from our own garden. Don't they look nice?"

Aunt Leah, a withered, little, old lady, in a dress of worn black silk, and sharp, gray eyes, peering through gold-bound spectacles, tasted of the tea, and shook her head.

"It's too weak," said she. "It isn't fit to drink!"

"I put in all the tea there was in the canister, Aunt Leah," said Saidee, with a distressed countenance.

Aunt Leah pushed away the cup, with an expression of disdain.

"It is as I might have expected," said she. "My neices have too little thought for my comfort to study my poor and few necessities. Never mind the tea; I can drink cold water, I dare say!"

Saidee wrung her hands in despair. How could she tell this week, feeble old lady, above whose declining years hung the threatening Damocles sword of heart disease, of their narrowing circumstances, of the empty exchequer, the clamoring creditors, the pitiful strait to which they were reduced?

"What shall I do?" she asked herself, as she went slowly back to the little kitchen of the ruinous Gothic cottage, which they had obtained for a ridiculously low rent because it was ruinous.

"Iv'e borrowed of the rector's wife twice, and I'm ashamed to go there again, and I've sold everything I can lay my hands on. But," glancing up at the picture which hung in the hall beyond, "there's the Valasquez still. A Valasquez is always worth money. Belle will scold about parting with it, and Aunt Leah will mourn; but we can't live on air and dew, like the fairies. I'll take it down to Mr. Bruner, the artist, this afternoon, and ask him to find us a purchaser. Poor people, such as we are, can't afford to retain old family relics." And so, when Aunt Leah was indulging in her afternoon nap, and Belle, the beauty of the family, was ironing out the flounces of her white muslin dress for the morrow's picnic, valiant Saidee climbed on a chair, took the unframed picture down (it was the head of some old Spanish grandee, with a stiff pointed ruff, and an evil leer in the eyes) wrapped it up in a newspaper, and crept across the meadows with it to the village.

Mr. Bruner was in his studio—a grizzle-headed, blunt old gentleman, in a belted linen blouse and a faded velvet cap. He nodded kindly at Saidee, who had once taken a few lessons from him, but when she displayed the canvas he shook his head.

"How much do you think it is worth," asked Saidee, wistfully.

"Nothing!" said Mr. Bruner.

"But," cried the girl, "it is a Velasquez!"

"That a Velasquez?" said Mr. Bruner, contemptuously. "My dear, there isn't a picture dealer in the country who would give you 50 cents for it. It is a mendacious imitation, and a wretched one at that."

So Saidee tied up the poor picture, and went home again, shedding a few tears as she walked under the whispering old trees.

"My last hope gone!" thought she. "But I'll not tell Aunt Leah or Belle that it is an imposture. They have alwyas taken such innocent pride in the Velasquez."

As she came past the old brick house at the foot of the Locust Lane, a load of furniture was being carried in, for it was the second week in May. Wicker chairs, twined with blue ribbon, a cottage piano, cases of books, engravings, bird cages, plants, and all sorts of pretty things.

She paused and looked at them, not without interest.

"I wonder who our new neighbors are?" she thought.

Just then, out trotted a stout, cherry-cheeked old lady, with her cap all on one side, and a worsted shawl tied over her shoulders.

"Oh!" said she, "you are the young woman who disappointed us yesterday about cleaning."

"No," said Saidee, crimsoning to the temples.

"Oh, dear! oh, dear!" said the old lady; "what is to become of us? All the furniture coming in, and my daughter lame from falling off a step-ladder, and the girl gone, and—but," with an eager look, "perhaps you can recommend some one to help us settle."

"I am sorry to say I cannot," answered Saidee, and she vanished behind the lilac hedge, rather amused at the mistake which the old lady had made.

Belle was full of news that evening.

"Oh, Saidee," she cried, "such a nice family is moving into the Locust House!"

"Yes," said Saidee, "I saw the furniture carts at the door, as I came from the village this afternoon."

"Oh, the village!" cried Belle, tossing her blonde head. "It's strange, Saidee, how much time you get to run about and enjoy yourself, while I am drudging at home. But there's a young gentlemen there—the handsonest man, Alace Aiken says, that she ever saw—and Mr. Pyle knows him, and he is to be at the picnic to-morrow, to get acquainted with the young people of the neighborhood. Won't it be delightful?"

"Very," said Saidee, indifferently.

But while Belle was talking, she had made up her mind what to do on the day of the picnic.

Early in the morning, while the flush of sunrise was crimsoning the sky, and blonde Belle asleep with her yellow hair in crimping pins, Saidee arose, dressed herself quietly, and slipped out of the back door like a gray shadow.

At eight o'clock, Aunt Leah rapped with her cane on the ceiling of her room, which was directly beneath the one occupied by her nieces. Belle made her appearance presently, in a faded calico wrapper, rubbing her eyes after a drowsy fashion.

"Where's breakfast?" said Aunt Leah.

"Where's Saidee?" counter-questioned Belle. "Oh, I know the selfish thing! She has got up early and gone down into the woods to get some pink azalias for her hair before the other girls think of it. She wants to astonish us all at the picnic. But I think she might have told me!"

"I'm afraid Saidee thinks more of herself than she does of us," said Aunt Leah, sourly.

And Belle, in a very ill humor, began to prepare the breakfast—a task generally assumed by her elder sister.

While Saidee, hurrying down the path by the swamp, took the short cut across the clover meadow, and was presently knocking at the door of the brick house where the load of furniture had stood the day before.

The old lady with the crooked cap and cherry cheeks came to the door.

"Have you engaged any one to help you get settled?" said Saidee, blushing very prettily.

"We can't hear of a soul," said the old lady. "Every one is engaged just now, and—"

"If you thought I could be of any use," faintly began Saidee.

"Bless me, child," said the old lady, "you are too slight and small. Besides," looking closer at her, "you are a lady."

"But I know how to clean house, for all that," said Saidee, valiantly. "I've done it for every year at home. We are ladies, but we are not people of means. And I think you will be suited with my work. It is necessary that I should earn a little money, and—"

"Come in, my dear," said the old lady—"come in, and have a cup of coffee with us. I am Mrs. Hartwick—and this is my daughter Kate."

"Saidee Lynn!" exclaimed the soft voice of a pretty young girl lying with a sprained ankle on the sofa.

To her amazement our heroine recognized one of her schoolmates, Katherine Hartwick, who had graduated in the same class with her, at boarding school, two years ago.

"But you surely never have come here to work!" said Kate in amazement.

"Yes, I have," said brave Saidee. "Why, is it any less creditable to clean paint and wash windows than to play croquet or do Kensington stitches? And my Aunt Leah has lost all her little property, and we are very, very poor. So now you know all about it. And when I have eaten my breakfast, if Mrs. Hartwick will give me a cleaning cloth, and plenty of soft soap, I'll show her what I can do."

So that Miss Lynn was mounted on a step-ladder, polishing off an antique mirror, when Kate's soft voice was heard saying:

"Oh, Harry! is that you?" We supposed, of course, that you were at the picnic. Miss Lynn, this is my brother Harry. Harry, let me present you to Saidee Lynn, my dear old schoolmate, who has come here to help us clean house."

Miss Lynn made as graceful a bow as she could under the circumstances. Mr. Harry inclined his head.

"At the picnic, indeed!" he retorted merrily. "Not at all. I've been hunting high and low for some one to help you, and for lack of success, I have returned to do a little whitewashing myself."

"Oh, have you?" said Saidee. "I know such a nice receipt for kalsomine—as white as alabaster, and it won't rub off at all."

"Let's make it," said Mr. Hartwick promptly.

No picnic could ever have been more delightful than this day among dust, whitewash, scouring sand and brooms.

Kate, on her sofa, hemmed curtains; Mrs. Hartwick bustled to and fro; Saidee, with her curly hair tied up in a handkerchief, scoured paint, and Harry whitened ceilings, and at twilight had three rooms in perfect order.

"We have achieved wonders," said Kate, looking around at the neatly tacked carpets, the soft garnet plush hangings, the pictures on the walls, the crystal brightness of the windows, while Mrs. Hartwick took Saidee mysteriously on one side

"My dear," said she, "I do not know how to thank you sufficiently. But I am ashamed to offer you a dollar and a half, although—"

"But I shall not be ashamed to take it," said Saidee, smiling. "Why should I? That is, if you really think I have earned it."

"My dear, you have more than earned it," said the old lady; "and if you could possibly come to-morrow—"

"Of course I will come," said Saidee.

Weary as she was she went round by the village to buy some Young Hyson tea for the old lady before she returned to the Gothic cottage.

"Well," she cried, brightly, "what sort of a day did you have at the picnic?"

"Awfully stupid," yawned Belle. "And that handsome young gentleman from Locust Lane didn't come at all."

"Didn't he?" said Saidee.

"And where have you been?" demanded Belle, in an injured tone.

"Oh, spending the day with a neighbor," said Saidee, with a laugh.

They finished the house-cleaning that week. Mr. Harry Hartwick found it necessary, we may add, to walk home with Saidee the next evening, and he developed a remarkable talent in the amateur painting and kalsomining line, before they got through.

"Is'nt she pretty?" said Harry, enthusiastically; "and she's brave, and isn't afraid of honest work; and altogether she is my beau ideal of a girl."

"Mamma," whispered Kate, laughing, after her brother had gone out, "I believe our Harry is in love with Sadiee Lynn."

"I'm sure I don't blame him," said Mrs. Hartwick. "She is a little jewel."

Aunt Leah never knew where the Young Hyson tea came from, nor the sponge cake, nor the white grapes, nor all the little luxuries that had cheered her of late; nor did she suspect anything until one day Harry Hartwick came to her, and formally asked her for her niece's hand in marriage.

"Well, I never!" said Aunt Leah.

"But how did you ever become so well acquainted with him," questioned Belle, half pleased, half jealous.

"Because I cleaned house for his mother," said Saidee, laughing.

And then, under solemn seal of secrecy, she told Belle all; and Belle declared that it was too romantic for anything, never pausing to think that real life is as full of romance as a summer meadow with buttercups, and that fortune comes to those only who go bravely out to seek fortune.—*Helen Forest Graves.*

A TRAVELER tells the story about his stopping at a hotel in New York one night, and being kept awake by a man pacing the floor in the room above. Occasionally, he would hear a moan of anguish; and at last he went up, like a good Samaritan, to see if he could not relieve the sufferer. "My friend," said the traveler, gazing sympathetically at the haggard face of the stranger, "what can I do for you? Are you ill?" "No." "What ails you, then?" "I have a note for $10,000 coming due to-morrow, and haven't a nickel to pay it with." "Oh, pshaw!" said the traveler, "Go to bed and let the other fellow do the walking."

IMPROVEMENTS IN WATCH MAKING.—Some 40 years ago the majority of watch carriers (and they were few then compared to the present time) were well satisfied with their time-pieces if they did not vary over five minutes a day, and one that would time closer than that was considered a valuable piece of property; but since then the demand for a better grade has increased, and American enterprise and genius have gone to work and are now producing time-keepers, both watches and clocks, that are but little outside of perfection.

True.

The worst client that an engineer can have is not the man who understands the principles of machinery, nor the man who frankly confesses that he knows nothing about machinery, but it is emphatically the man who, knowing little or nothing about machinery, assumes in his dealings with his engineer all the knowledge of an expert. It is the man who acts contrary to the engineer's professional advice on that ground that (*his*) "common sense" dictates differently; it is the same man who, when trouble then occurs, expects to hold his engineer responsible and abuse him for the damage his own obstinacy and ignorance have caused. The only way for an engineer of proper dignity to get along with a man of this caliber is not to get along with him at all. The refusal to work for a man of this type, no matter what may be the remuneration offered, is the way which experience has found to be the best for both the interests of engineer and client. A treatise could be written on this general subject by any engineer of experience, and a treatise upon the relation of engineer and client, as hints to young engineers, would, it strikes us, be an acceptable and valuable contribution to engineering literature, but the essence of it would, in our opinion, be embodied in the statement that the engineer should be accorded an authority in his department similar to that which is now generally accorded the physician in his special profession.—*American Engineer.*

GREAT MAGNETIC DISTURBANCE.—Important magnetic disturbances were observed in France between the 6th and 20th of April. On several days the telegraphic lines in nearly all directions were traversed by accidental currents; at certain hours the interruption was so great that dispatches could only be [sent on closed circuits with but a single earth contact. The international lines gave the same results; it is, therefore, probable that there was a magnetic storm of great extent, of which the effects were felt in the whole northern hemisphere. Phenomena of this kind are of great importance in the study of terrestrial magnetism. Mascart has recorded the principal phases as they were observed at the College de France, and has given a description of his apparatus. The storm did not break out suddenly; it was heralded for several days by an almost constant agitation of the magnetic needle. The first great shock began at 11h. 45m. P. M. on April 16th, and affected simultaneously the three elements of declination, inclination and intensity. Another similar shock occurred on the 20th. During the whole time the register of atmospheric electricity did not show any disturbance which seemed to be connected with the magnetic phenomena.—*Comptes Rendus.*

DIFFERENCES OF SEA LEVEL.—During a voyage to and from Campbell island, M. Bonquet de la Grye made a series of observations upon the saltness and density of the sea water. Many meteorologists have thought that there should be an intimate relation between the saltness of the ocean and the currents which traverse it, but processes of exact investigation have been hitherto employed only in laboratories and upon a limited number of samples. Mohr's process for the investigation of chlorides, which has been popularized by M. Roux, is not only exact, but it can be employed upon shipboard under all circumstances. It requires neither accurate weighings nor difficult precautions; the moment is marked at which a change of tint is made by the addition of bichromate of potash, and a simple reading upon a graduated tube, or counting the drops of the experimental liquid, is sufficient to give, with great accuracy, the weight of the chloride which is contained in a given quantity of water. By means of this process, De la Grye has constructed a chart of the relative levels of the Atlantic ocean between 15° and 45° north latitude.—*Ann. de Chim.*

CANONADING ALLEGED TO BE HEARD 1,000 MILES.—For the first time in history the progress of a great naval engagement has been consecutively reported by telegraph. A novel member of the fleet before Alexandria was a telegraph ship, through which, by means of the Mediterranean cable line, the War Office in London and the civilized world were kept informed of the movements of the war vessels and the results of the firing. The nearest cable station from Alexandria was at Malta, distant about 1,000 miles from the scene of the battle. A press dispatch says that when a telephone was attached to the Malta end of the cable the firing of the guns at Alexandria could be distinctly heard, though no oral communication was possible over that length of cable. It is not stated whether a telephone transmitter was used at the Alexandria end, or whether the general electrical disturbance, caused by the explosion of the great guns, so affected the cable as to report the shots, through the telephone, at Malta.

ANOTHER APPLICATION OF ELECTRICITY.—The call for an electrical sheep shearer, made some time since by a New Zealand gentleman, and copied into these columns, has brought forth fruit as follows: The head of the Hudson Bay Fur Co., of England, who, by the way, is a Vermonter, has announced that he has applied electricity to the trimming of seal skins. The skin is drawn over a knife-edge bar, above which is stretched a fine platinum wire, which, raised to a white heat by an electric current, meets the larger hairs which rise above the under fur, and mows them down.

For our Boys and Girls.

Our Puzzle Box.

Numerical Enigma.

I am a word of fourteen letters:
My 4, 3, 2, 12 is to talk wildly;
My 6, 3, 4 is a vehicle for transporting passengers and freight;
My 13, 7, 11 is a wickedness;
My 14, 8, 9, is a French coin;
My 10, 5, 4, is a title of respect;
My 1 is a vowel;
My whole signifies cupidity.

UNCLE CLAUDE.

Phonetic Spelling.

Example—A girl's name. Ans.—L. C. (Elsie).

1. Full of seeds.
2. A city in South America.
3. A boy's nickname.
4. Not difficult.
5. A number.
6. A kind of bird.
7. To fall to pieces.
8. The same as whatsoever.
9. Very cold.

J. L. C.

Added and Subtracted Fractions.

To one-sixth of a plant add one-fourth of a vehicle, two-fifths of a fruit, and one-fifth of a vagabond, and the sum will be a very useful article. From this sum subtract two-tenths of a city and the difference will be an animal.

Hidden Towns.

1 Hand over your tickets, please.
2. You know Ryson was at home, John.
3. Well, if I am it, you must not intrude upon me.
4 I looked over the placid scene.
5. "Papa rises at five," said the little boy.

MELANCTHON.

Reversals.

1. Reverse a negative adverb and form a heavy weight.
2. Reverse a masculine nickname and form a lair.
3. Reverse to exist and form wickedness.
4. Reverse a number and form a covering for the hair.
5. Reverse a plural verb and form an epoch.
6. Reverse duration and form to send forth.

UNCLE CLAUDE.

Billy, Jack and the Master.

"He is coming, Billy; just listen—don't you hear his whistle?" said Jack, turning his head in the direction of the sound that he hoped foretold his master's arrival.

Billy pricked up his ears after the manner of horses and listened attentively.

"I think he is coming," said Billy, "I've lived with our master a long time, Jack—years before you came—and he has never forgotten to come to see me three times a day. It's not every one who has so kind a master."

"That is true, Billy, and I have always thought I was really fortunate in finding such a good home."

"You are a lucky dog, Jack! I feel thankful, too, and whenever I travel on the road, or work in the field, I always do my best, and master never fails to give me a few gentle pats when he removes the harness."

"He thinks everything of you, Billy. The other day I heard him say that you should stay with him till you died, and that you should not be worked to death, either."

"Did he? Bless him! And I heard him say that he had not a friend of whom he thought more of than faithful Jack."

"I tell you, Billy, we are a happy family—master and you and I."

Here further conversation was interrupted by the arrival of the master. Jack, who had been standing with his forepaws on the fence, jumped down to meet him, frisking about in such a joyful manner that very much pleased the master. Billy, more quiet in his demonstrations of affection, walked leisurely towards him, gave a gentle neigh of welcome, and laid his head affectionately upon his master's shoulder for the caress he was sure to receive. There had been a time when Billy and Jack had been a little jealous of one another; but that time was long ago, when they were not much acquainted. Now they were the most devoted friends; thought more of each other than anything else in the world, except the master.

The master petted Billy and talked to him quite awhile, then spread out before him a bountiful dinner of hay and oats, and, leaving Billy to enjoy his repast, he turned to Jack.

"Now, Jack, what do you say to a hunt before dinner?" said the master. Jack was delighted with the idea, for hunting was his particular forte.

The master went into the barn, took his gun, and he and Jack proceeded to the woods. They had not gone far, however, when Jack stopped and pointed to a fox. The master fired his gun, and the fox that had been the terror of all the hens and roosters in the neighborhood, breathed no more. The master was well satisfied with his game. He sat down by the side of an old tree to talk the matter over with Jack.

Jack was delighted, and when he heard his master say, "Now, Jack, I think you have earned your dinner," he leaned his head to one side and raised one paw to give his master a salute like a soldier.

The master and Jack returned home, and, after dinner, Jack ran down to the barn-yard to tell Billy all about the hunt, and that they would not be disturbed any more at night by the cackling of hens and roosters on account of that fox.

Household Hints.

Hints on Painting Old Woodwork.

Saying nothing of the economy of painting, it is a good practice to apply a coat of paint to all woodwork of the kitchen, once in two or three years. Good paint always saves much hard labor in keeping such parts of a house clean. Some doors that are used often, need painting every year, to keep them at all decent. It is not best to put on thick, heavy coats, as these are needlessly expensive, and after a few years will look bad. The same amount of paints, applied often in thin coats, will look better and cost little more.

Where woodwork is much soiled, especially by hands not scrupulously clean, it is sometimes difficult to make even the best of paint hold well. It will dry soon enough, but will afterwards peel off, for paint will not adhere well to a dirty, greasy surface. This is particularly the case in rooms where washing and cooking are usually carried on.

In order to make paint stick and become about as firm as the wood itself, wash the surface thoroughly with moderately strong lye, using a short swab, then wipe it off with a cloth wrung out in fresh water. This will remove all grease and dirt that prevent the paint from taking a firm hold.

Paint for such places should be made of the best white lead, mixed to the consistence of thin cream, with two parts of the best boiled linseed oil, and one part of good lacquer, or "liquid drier." Such paint will dry in one day and become sufficiently hard to handle in a few days. A very small quantity of lamp-black will make a beautiful lead color. Yellow ochre may be added until the paint is of the desired shade for floors, mop-boards, or wainscoting. Pure white lead for the body will make a much more durable paint for floors than most other kinds. The use of zinc-white, which is much superior to white lead in some situations, as for instance in privies, is attended by a little difficulty, because it must be applied very thick to cover well when used alone; but a second coat, not so thick, may be put on over other paint, and it will add greater brilliancy and will not tarnish from sulphurous gases frequently rising from sink-drains, etc., nor from the exclusion of light, which causes white lead paint to turn yellow.—*Am. Agriculturist.*

CLOTH OF TIN.—A French chemist is said to have invented a process by which fabrics can be permeated by a solution of tin. The method is described as follows: He first makes a mixture of zinc powder and dissolved albumen, which he spreads over the fabric by means of a brush, leaving it to dry, when the stuff is passed first through superheated steam, and afterward through a solution of chloride of tin. By this means an exceedingly thin layer of tin is spread over the whole side of the fabric, which is thus rendered waterproof, and protected against ordinary rough usage. The utility of the invention is not quite apparent, for probably few people would care to don garments in which they would bear a very close resemblance to animated tin kettles and teapots, though, in the preparation of theatrical dresses, and even the bright "trimmings" in which the female heart delights, the invention might find a limited application.

ARCHIMEDES AND THE LEVER.—The apothegm of Archimedes—"Give me a lever long enough and a prop strong enough, and I will move the world"—arose from his knowledge of the possible effects of machinery; and, however it might astonish a Greek of his day, would now be readily admitted to be as theoretically possible as it is practically impossible; for, in the words of Dr. Arnott, Archimedes "would have required to move with the velocity of a cannon-ball for millions of years to alter the position of the earth by a small part of an inch. This feat of Archimedes is, in mathematical truth, performed by every man who leaps from the ground, for he kicks the world away from him whenever he rises, and attracts it again when he falls."

WAGON WHEELS.—To prevent the tire of a wagon wheel from coming loose and requiring to be refitted, a method highly recommended is to fill the felloes with linseed oil before the tire is put on. The timber thus treated is not liable to injury by water, and lasts much longer. The process followed is to hang the wheel in the oil, each felloe being immersed for one hour. The oil, which is contained in a cast-iron heater of suitable length, is brought to a boiling heat—a higher degree must be avoided, or the wood will be burned. The timber should be dry, as in a green state it will not take oil. The tire of a wheel thus treated, will, it is said, wear out before becoming loose.

WHITENING SMOKED WALLS.—A method of cleaning and whitening smoked walls consists, in the first place, of rubbing all the black, loose dirt off them, by means of a broom, and then washing them down with a strong soda lye, which is to be afterwards removed by means of water to which a little hydrochloric acid has been added. When the walls are dry, a thin coating of lime, with the addition of a solution of alum, is to be applied. After this has become perfectly dry, the walls are to be calcimined, or coated with a solution of glue and chalk.

Health Column.

The Heart and Its Diseases.

Death from heart disease is of alarming frequency. Almost daily we hear that friends or acquaintances, or public men have suddenly died, and on inquiry it is found that the heart was at fault. This fact has not unfrequently given rise to the remark that it is strange the heart should so often be the seat of mortal disease. But the truth is we attach far too little importance to this organ and its functions. It performs its great office so quietly and uninterruptedly that we even forget its existence. From a period anterior to birth until death, during sleeping as well as waking hours, ceaselessly and noiselessly, with steady and measured rhythm, it circulates the vital fluids through every tissue of the body. Seventy-five times it pulsates in a minute, 108,000 times in the day, without exhaustion or apparent need of repose.

The heart is a hollow muscular organ, weighing but 10 ounces, and is suspended in the cavity of the chest by delicate ligaments; and yet, it performs quietly and noiselessly, with but the slightest jar, an incredible amount of labor. In 24 hours it is estimated that the heart accomplishes more than three times as much work as a common laborer in 10 hours. "Three old women sitting by the fire," says a recent scientific writer, "alternately spinning and sleeping, do more work by the constant beating of their hearts than can be done in a day by the youngest and strongest laborer." He adds: "No labor that we can undertake is regarded as more severe than that of the muscle employed during a boat race; and yet this labor, severe as it is, is only three-fourths of that exerted day and night, during life, by each of our hearts."

If the entire force of the heart were expended in lifting its own weight vertically, it would be raised 19,754 ft. in one hour. Compare this with the exertions of an active pedestrian, who can raise his own weight but 1,000 ft. per hour, and we find the heart exerts itself about 20 times as much force; or with the best locomotive, which can raise its own weight 2,700 ft. in one hour, which is but one-eighth of the energy of the human heart. To a reflective mind, it cannot be a matter of surprise that this delicately-constructed organ, laboring so vigorously without a moment's rest day or night, should frequently and often suddenly, give over its labor and cease to act. On the contrary, it is rather a matter of astonishment that the heart should maintain its integrity, year after year, amid the scenes of excitements through which the individual passes for three score years and ten. In severest sickness, when other organs fail, the heart pursues the even tenor of its way, continuing its pulsation to the last moment of life. Like a strong warrior in a citadel, it yields only when every resource has been exhausted.

Bruises and Cuts.

At the present time, when accidents are so common, it is the duty of every one to learn how to take care of the sick or injured. If any serious or sudden injury happens to a member of a family and one knows what to do, it may be the means of saving a life. Young people in the shop, in mines, or on the farm, are liable to get hurt or injured in some way or other—either "cut" or bruised. The bruised limb should rest, be kept moderately warm, bathed frequently with tepid water and chafed gently with the naked hand.

In case of incised wounds (cuts), at first there is free bleeding from the many divided capillaries. If no large vein or artery is severed, the flow of blood will soon cease; press the lips of the wound together and trickle on cold water until the blood and all foreign matter is removed; then apply narrow strips of adhesive plaster. The union of the divided parts is effected by the action of the blood vessels, and not by healing salves. The one thing is to keep the parts together and protect the wound from the air; nature will do the rest.

In any deep wound, where a vein is severed, tie a handkerchief, or any band, *below* the wound. If an artery, tie it *above* the wound; sometimes in case of an artery, it is difficult to stop the flow of blood. If there is any trouble, place over the artery and under the bandage a cork, or else twist the handkerchief by placing a stick under it and keeping the knot over the artery as the artery can be felt by its pulsation. In binding up the wound, keep the limb so as to have as little strain as possible upon the wound. The care should be the same as any cut.

THE BEST MEDICINES.—*Hall's Journal of Health* says the best medicines in the world in the cure of disease are warmth, rest, cleanliness and pure air. Some persons make it a virtue to brave disease, "to keep up" as long as they can move a foot; and sometimes they succeed, but oftener the powers of life are hereby so completely exhausted that the system has lost all ability to recuperate. Whenever walking or work is an effort, a warm bed and a cool room are the first indispensable step to a sure and speedy recovery.

REMEDY FOR PAINFUL WOUNDS.—Take a pan or shovel with burning coals and sprinkle upon them common brown sugar, and hold the wounded part in the smoke. In a few minutes the pain will generally be allayed, and recovery proceeds rapidly.

Worth Knowing.

CURING DISCHARGE OF THE EARS.—An exchange has the following on this subject: As the cause of such trouble is always constitutional, local applications are of no benefit, and besides may be dangerous for the delicate organs of hearing. Many a patient has become deaf by a treatment which was recommended with the best intentions. The causes may be manifold, a hereditary taint, want of exercise in the open, fresh air, sleeping in an ill-ventilated bedroom, improper food, injudicious diet, use of stimulants, indulgence in exhausting passions, vicious habits, etc. It must not be lost sight of that conditions differ, and that what will not harm one man except in later life, will at once affect others. The cure is evident; take out-of-door exercise, sleep with your windows open, only take care not to catch cold in a draft, watch your digestion and eat only what agrees with you, but indulge in a variety of food, use no tobacco or liquor of any kind, but if necessary some mild cathartic, and add to this the daily use of some blood-purifying decoction of sarsaparilla, sassafras, or its equivalent, and marry, if you have no wife. Remember that married men are in general healthier and live longer than bachelors. Life insurance companies understand this.

THE HEALTHFULNESS OF LEMONS.—When people feel the need of an acid if they would let vinegar alone, and use lemons or apples, they would feel just as well satisfied and receive no injury, A suggestion may not come amiss as to a good plan when lemons are cheap in the market. A person should then purchase several dozen at once, and prepare them for use in the warm, weak days of the spring and summer when acids, especially citric and malic, or the acid of lemons, are so grateful and useful. Press your hand on the lemon and roll it back and forth briskly on the table to make it squeeze more easily; then press the juice into a bowl or tumbler—never into a tin; strain out all the seeds, as they give a bad taste. Remove all the pulp from the peels, and boil in water—a pint for a dozen pulps—to extract the acid. A few minutes' boiling is enough; then strain the water with the juice of the lemons; put a pound of white sugar to a pint of the juice; boil ten minutes, bottle it, and your lemonade is ready. Put a teaspoonful or two of this lemon syrup in a glass of water, and have a cooling healthful drink.

TO RESTORE SCRATCHED FURNITURE.—Scrape one pound of beeswax into shavings in a pan; add half a gallon of spirits of turpentine and one pint of linseed oil. Let it remain 12 hours, then stir it well with a stick into a liquid; while stirring, add one-quarter of a pound of shellac varnish and one ounce alkanet root. Put this mixture into a gallon jar, and stand it before the fire, or in an oven, for a week (to keep it just warm); shake it up three or four times a day. Then strain it through a hair seive and bottle it. Pour about a teaspoonful on a wad of baize; go lightly over the face and other parts of the furniture, then rub briskly with a similar dry wad, and in three minutes it will produce a dark, brilliant polish, unequaled. Another preparation may be made as follows: Make a mixture of three parts linseed oil and one part spirits of turpentine. It not only covers the disfigured surface, but restores wood to its original color, and leaves a luster upon the surface. Put on with a woolen cloth, and when dry, rub with wool.

HOW THE DIAMOND CUTS GLASS.—Dr. Wallaston ascertained that the parts of the glass to which the diamond is applied are forced asunder, as by a wedge, to a most minute distance, without being removed; so that a superficial continuous crack is made from one end of the intended cut to the other. After this, any small force applied to one extremity is sufficient to extend this crack through all the whole substance and across the glass; for, since the strain at each instant in the progress of the crack is confined nearly to a mathematical point at the bottom of the fissure, the effort necessary for carrying it through is pooportionally small. Dr. Wallaston found by trial that the cut caused by the mere passage of the diamond need not penetrate so much as the two-hundredth part of an inch. He found, also, that other mineral bodies, recently ground into the same form, are capable of cutting glass; but they cannot long retain that power, from want of the requisite hardness.

UNIFORM MOTION.—It is always desirable that the motion of a machine should be regular. Even supposing that the first mover is perfectly constant and equable in its action, the machine may not be regular in its movements, from the irregularity of the resistance to be overcome. But still, if both the power and the resistance were perfectly regular, the machine would not be perfectly uniform in its motion, for there are particular positions in which the moving parts of a machine are more efficacious than others, as in the crank, for instance; hence the energy of the first mover will be unequally transmitted, and irregularity in the motion of the machine will consequently follow. The motion of some machines bears a constant tendency to accelerate, others to retard; and, perhaps, in no case whatever can the motion of a machine be said to be perfectly uniform, but common sense will point out the necessity of having the motion as uniform as it can be made, else it will increase in proportion as it is multiplied through the machinery.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "good of the Order."

Silver Spray, D. of H.

The anniversary of Silver Spray Lodge, D. of H., will come off some time next month, and preparations are being made to have a grand time on the occasion.

San Francisco, 4.

Held an interesting meeting on Wednesday evening, at which two candidates were initiated in the Junior Workman degree, and two applications received. At the next meeting there will be two candidates for initiation and three for the M. W. degree. This Lodge has about 160 members, and under the genial supervision of its present Master Workman, G. W. Crawford, is flourishing, as usual. Bro. Crawford is an experienced Lodge man, being also a Past Sachem among the "Red Skins," and having passed the chairs in the Odd Fellows. He has frequently been a Representative to the Great Council, and is a member of Lincoln Post, G. A. R. San Francisco, No. 4, is the oldest of our city Lodges, and has one of the best halls.

Aurora, 8, D. of H.

Aurora, No. 8, held its monthly meeting on Tuesday evening, initiating one candidate. A nice social time was had. It was unanimously proposed to meet twice a month, and a committee was appointed to confer with Olympic Lodge for that purpose.

Harmony, 9.

The last meeting of Harmony Lodge in July was the occasion of their regular social. Bro. Poland, D. D., together with several visiting members and a large number of their own members, filled the cosy Lodge-room. After the business of the Lodge had been transacted and a really social recess enjoyed, the following programme was given: Piano solo, Prof. Schwartze, of Harmony; reading (humorous), Wm. Decker, P. M. W.; vocal solo (baritone), Bro. G. T. Perkins, of Spartan; this was an artistic effort that was deserving of the hearty recall he received, and kindly answered with a humorous piece; character reading, Prof. Eastman, well received and heartily applauded; song and encore, Bro. Gus. Pohlman, of Burns; reading, D. Cohn.

On Saturday evening, July 29th, Bro. T. G. Smith, one of the junior members of Harmony, No. 9, presented the Lodge with a very large anchor and shield, set on a frame covered with silk—the work of his wife, who is also a Workman's daughter. Over the anchor and shield, in metal letters, are the words, "Harmony. No. 9." At the request of Bro. Smith, Bro. F. Blight, acting P. M. W., made the presentation speech in appropriate and especially commendable words. In the course of his remarks he said that this new brother had brought in a candidate within one week after he was made a Master Workman. Bro. D. Cohn, Financier of Harmony, accepted this regulation emblem of the Lodge in the name of and for the Lodge, and expressed himself in very feeling terms, complimentary alike to the worthy young brother and Harmony Lodge. There was also a motion made to forward a set of engrossed resolutions in the name of Harmony Lodge to Bro. Smith.

Golden Dawn, 10, D. of H.

Golden Dawn, No. 10, meets on alternate Saturday evenings, August 19th, September 2d, September 16th, September 30th.

Yerba Buena, 14

This old pioneer has attained a membership of 241, with a fund of over $4,400 in its treasury. It has raised its initiation fee to $25, and has work with from one to six candidates every meeting. It also pays sick benefits of $10 per week, and a funeral benefit of $100, which is highly commendable.

Bernal, 19.

Bernal, No. 19, had a genuine surprise on Monday evening, Aug. 8th. Prominent and leading members of Myrtle, No. 42, Yerba Buena, No. 14, and Noe Valley, No. 185, constituting District No. 4, made up a party of 50 and marched into the Lodge in a body, without previous warning. After the business of the Lodge had been transacted, a general social and speech-making was indulged in. The record of proceedings would read thus: Speech, by A. A. Eggleston, P. M. W.; reading, by Chas. D. Coon, Rvr. of Yerba Buena; speech, Bro. White, M. W.; song and speech, by J. D. Thompson, District Deputy; speech, Bro. Welbron, of Noe Valley; recitation, G. W. Lamont, Rvr. of Bernal; speeches, Bros. Houghton and Powell, P. M. W.'s, and several others. The feature of the evening was an artistic recitation by Bro. Brown, of Bernal, after which a season of sociality was had, and the Havanas passed around.

Valley, 30.

The 900 mark will soon be reached in Valley. On Aug. 9th one application was received and one given the M. W. degree, as a special favor to a candidate who wished to depart on a journey, this being what is known as off night, or night for sociality and business. District Deputy McKay was in attendance, and made a few remarks in the way of friendly criticism. A goodly delegation from Fidelity paid a visit, and the usual happy, felicitous and complimentary speeches were made during the evening. Bros. Reading, Belden, Farlass, all P. M. W.'s of Fidelity, made acceptable and well-timed remarks, and Bros. Case, Hoeber and Mysell answered for Valley, closing a very good meeting.

Magnolia, 41.

Magnolia Lodge, No. 41, of this city, has now about $5,000 in the general fund, notwithstanding that, within the past year, they have paid five extra assessments for the members, and have, from the beginning, paid sick benefits of $10 per week, and $50 funeral expenses on the death of a brother. In addition, they have a relief assessment fund, set apart to pay delinquent assessments for the members. The affairs of this Lodge have been so wisely and carefully managed, that, to-day, it is one of the most prosperous and independent in the jurisdiction.

Washington, 60.

A very pleasant surprise was given Bro. M. Adler, Receiver, on Thursday evening, August 10th. At the close of the business, Master Workman M. Morganstein, in a very appropriate and highly entertaining speech, presented him with a souvenir, consisting of a fine case of silver knives and forks and a set of tea and tablespoons. Accompanying them was a card, addressed "Souvenir from the Members of Washington Lodge, No. 60, A. O. U. W., to their Receiver, M. Adler." The monogram, "M. A.," is carved on each article, and all are enclosed in a very fine case. This elegant present was from the house of Bros. Schulz & Fischer. Bro. Adler was apparently taken completely by surprise, and although his speech was short, it was truly eloquent, and breathed the true fraternal spirit of a Workman. The general good feeling prevailing was quite marked, and a large number of the members and visitors made fine and acceptable speeches. Washington Lodge has 196 members, and several propositions were made to increase their numbers. After the Lodge meeting the happy company were all invited to the Louvre, and a fine supper ordered. Toasts, congratulations, and good things to eat, with Havanas at the close, brought to an end a well-spent and pleasant evening.

Sts. John, 73.

We met Bro. M. P. Stone, of Highland Lodge, No. 104, Grass Valley, in Sts. John Lodge on Thursday evening, Aug. 3d. Bro. Stone has been visiting our city schools to see the management thereof, and gain any information that may be of use or benefit to him in his official capacity as City Superintendent of Grass Valley.

Friendship, 179.

At the meeting of August 9th there were many features that were the subject of congratulation. Three applications for the degrees were received, and the M. W. degree was conferred on one candidate, which raises the membership above the 100 mark. Ralph B. Kittredge was unanimously elected Recorder, in place of H. Gambs, resigned, and the District Deputy, E. Danforth, installed him in his office. Bro. H. Gambs, who was elected Recorder at the formation of this Lodge, and has served continuously since, was tendered a unanimous vote of thanks for his efficient service. As a part of the sad duties of the evening, the charter was ordered to be draped in mourning for 30 days, in memory of their late deceased brother, L. Millzner. Under the usual head, Bros. Danforth, Jordan and several others made acceptable and complimentary speeches.

Triumph, 180.

On Tuesday evening, Aug. 8th, this young Lodge received one application, and conferred the M. W. degree on three candidates. The work was well done, with the exception of one of the officers. There was a full meeting, and the District Deputy, W. I. McKay, made an official visit, his membership being in this Lodge. This makes over 150 members in this young Lodge.

Lodge Locals.

Silver Wreath, 2, Globe City, Arizona.

Bro. H. C. Hitchcock, P. M. W. of Silver Wreath, No. 2, Arizona, writes: "Our Lodge is in a comparatively flourishing condition, and as soon as cooler weather sets in, we expect to initiate a number of candidates."

Union, 3, Missoula, Montana.

EDITORS WATCHMAN:—Allow me, through the valuable WATCHMAN, to make mention of the proceedings of Union Lodge. The WATCHMAN comes regularly to a number of us, and is read with interest and pleasure; and is regarded as a noble and earnest advocate of our beloved Order. We have a small, but determined band of 36, with prospects of increasing our numbers soon. Now is the busy season of the year, and our chances are not so good as they will be later. We have our little arguments, and at one time we had quite a stubborn contest over the admission of Bro. Smith, a former member of an Iowa Lodge, all of which resulted in binding us more firmly together. At our recent election, the following-named officers were elected for the ensuing term: John P. Smith, M. W.; William R. Sparks, F.; Walter J. Fulkerson, O.; O. B. Batten, Fin.; Frank P. Kern, Rdr.; George B. Hartman; Rvr.; Herman Kohn, G.; Walter J. Wright, I. W.; Albert Otto, O. W.; Dr. A. K. Ives, Med. Ex. More in the future.—WILLIAM R. SPARKS, Foreman.

Organization of Pacific, 7, at Beaver, Utah.

The work of introducing the Order of United Workmen is being vigorously pushed throughout the Territory of Utah. Within the past six weeks Lodges have been instituted at Salt Lake, Ogden, Bingham, Frisco and Silver Reef, Ontario Lodge, No. 1, at Park City, was instituted last March. On Thursday evening, July 13th, J. W. Kinsley, Deputy Grand Master Workman, assisted by George Fennemore, of Philadelphia Lodge, instituted Pacific Lodge, No. 7, at Beaver. The following officers were unanimously elected and installed: J. W. Russell, P. M. W.; R. H. Burke, M. W.; W. G. Holt, F.; E. W. Hansen, O.; Sam. Fennemore, Rdr.; E. C. Matthews, Rvr.; Dr. E. Smith, Fin.; J. N. Coombs, G.; J. B. McGregor, I. W.; J. B. Burns, O. W.; Dr. J. W. Christian, Med. Ex. The Lodge was named after Pacific Lodge, No. 7, of Oakland, California, one of the oldest, largest and most influential Lodges in California. Great interest was manifested in the Order at Beaver, and Pacific Lodge promises to become a thrifty and important addition to the Order in this jurisdiction. The Lodge has secured the exclusive lease of Thompson's hall, and propose fitting it up in a manner alike creditable to itself and the Order.

Saucelito, 20.

But few of the readers of the WATCHMAN have more than a casual knowledge of the existence of Saucelito Lodge, No. 20. They read the name and know its number, but farther than this but little is known. On Jan. 26, 1878, Saucelito Lodge was instituted with 15 members. From that time to the present its membership has increased to 42; not a rapid growth, but a healthy one. They are more careful as to the quality than the quantity of material of which the Lodge is composed. On the 10th inst. they were visited by J. W. Watson, P. M. W., who conferred the J. W. degree on one new member, and under the "Good of the Order" gave them an address on what should constitute the qualifications of a true Master Workman, and upon the objects of the Order in general. The town of Saucelito, from which the Lodge derives its name, is a beautiful little city, located at the base of high hills, covered with natural oaks and other ornamental trees. In front is Richardson's bay, but to the stranger it is quite a problem to solve where San Francisco bay stops and Richardson's bay begins. On the hillside are many pretty cottages, and some closely resembling mansions, with beautiful surroundings. Truly, this is the second "Nob Hill," and the day is not far distant when these hills, with the many beautiful plateaus, will be occupied by the more wealthy of San Francisco. To the pleasure seeker, there is no place that affords so many attractions, at so small an outlay, as Saucelito. Bro. Chas. Forrest has a fine boat house, and boats for sailing and fishing purposes. The fish are caught in great quantities and of many kinds. Bro. Schnell's hotel is just the place where the stranger enjoys the comforts of a pleasant seaside resort. Certainly, Bro. Schnell knows how to make everybody happy who comes within reach of his hospitality. Much could be said in praise of all, in regard to their industry and sobriety, and in closing this hastily written article, will say that the few hours enjoyed with the kind brothers of Saucelito will long be remembered by J. W. WATSON.

Oliver, 220.

On Thursday evening, the 27th of July, D. D. G. M. W., H. A. Oliver, organized a Lodge of A. O. U. W. in Middletown, with the following named persons as members: J. Renike, J. H. Carver, J. L. Read, D. L. Brooke, Dr. Thompson, Q. V. P. Day, C. W. Armstrong, G. W. Marshall, G. E. McKinley, F. Cameron, D. Poston, C. M. Young, J. R. Dewar, John Severio, Leon Lobe, M. Muntz, J. R. Coats, J. M. Collins, W. J. Nickerson, Samuel Couter, A. Skoog, J. M. Batten, H. Crabtree, R. Kingsman, L. T. Adams, J. Walkgreen, Adam Fickas, F. McCall, W. J. Armstrong, J. I. Harbin and Oscar Martin. The Lodge is known as Oliver Lodge, No. 220, A. O. U. W. The Lodge at present occupies the Odd Fellows' hall.—*Lower Lake Bulletin.*

Another New Lodge in Utah

One of the best Lodges of this Order that has yet been organized in Utah by Bro. J. W. Kinsley was instituted on the 26th ult., at Provo. The charter list comprises professional men, merchants and respectable tradesmen, and would be a credit to any organization. The Lodge was named "Washington," after Washington Lodge, No. 60, of this city, that being one of the Lodges with which Deputy Grand Master Workman Kinsley enjoys such very intimate relations, and to which he is indebted, in no small degree, for his present prominent position in the Order. The following officers were unanimously elected and installed: A. G. Sutherland, P. M. W.; Benjamin Bachman, M. W.; Henry W. Davis, F.; Charles Carroll, O.; Brigham Shurtleff, G.; Dr. W. R. Pike, Rvr.; Jesse B. McCauslin, I. W.; Evart Orser, O. W.; J. W. Brown, J. N Christensen and Charles Clinton, Trustees; Dr. W. R. Pike, Med. Ex. The Lodge voted to admit members for 30 days for $15, and a large addition in membership is expected before the charter closes.

Oakland Lodge Locals.

Keystone, 64

At the last meeting of the Lodge, on Tuesday evening, a candidate received the M. W. degree, when the work was performed by the new officers. The new Master, Henry Menges, performed his duties in a manner to surprise his friends, having the secret work as perfect as if in the chair many months. In fact, all the work he accomplished was in a very satisfactory and perfect manner, showing he had appreciated the importance of the subject while in the Foreman's chair, and had suitably fitted himself for the office to which he was promoted. The new Overseer, Mr. Schade, performed his duties well, having everything committed to memory carefully, and delivering his words with clear, distinct diction, pleasant to listen to. The P. M. W. chair was filled by P. M. W. Nelson, who, having recovered from a severe illness, was welcomed back to the Lodge again. All the new officers seem well up in their duties, and the Lodge work is satisfactorily carried on. Next Tuesday night the Grand officers will be present, and a number of visitors are expected from other Lodges. Keystone has a constantly increasing membership.

Resolutions of Respect.

[IN MEMORIAM.]

To the Master Workman, Officers and Members of Eden Lodge, No. 20, A. O. U. W., San Lorenzo.—DEAR SIRS AND BROTHERS: We, your Committee, appointed to draft resolutions upon the death of our brother, Frederick Bertram, beg leave to submit the following report:

WHEREAS, For the first time in the history of our Lodge, death has invaded our fraternal home and bereft us of our honored brother, Frederick Bertram; therefore, be it

Resolved, That, by the death of Bro. Bertram, this Lodge loses a most worthy member, his family an affectionate husband and father, and the community an honorable and useful citizen.

Resolved, That this Lodge extend to her, who has been the partner of his joys and sorrows, his hopes and fears, their full and heartfelt sympathy, and, to his little ones, our love, best wishes and sincere hopes for their welfare.

Resolved, That a copy of these resolutions be presented to his family, a copy be spread upon the minutes of this Lodge, and a copy be forwarded to the PACIFIC STATES WATCHMAN for publication; and, as a token of our respect, the charter of this Lodge be draped in mourning for the period of 30 days.

A. PRESTON CRANE,
ED. O. WEBB,
THOMAS CLINES. } Com.

HENRY DOFMAN, Recorder, San Lorenzo, July 29, 1882.

[IN MEMORIAM.]

HALL OF HARMONY LODGE, No. 9, A. O. U. W.,
SAN FRANCISCO, CAL., August 8, 1882.

The undersigned, your committee appointed to draft resolutions in memory of our deceased brother, Joseph Calhoun, who was drowned on the bar of the Columbia river, Oregon, during the night of June 4, 1882, respectfully submit the following:

WHEREAS, It has pleased Almighty God, the Supreme Master Workman of the whole universe, in his infinite wisdom, to take from us our well-beloved brother, Joseph Calhoun; that, while we bow in humble submission to His holy will, yet we deeply deplore the loss of this, our brother, who was a true Workman, and whose face we shall no more see on earth; therefore, be it

Resolved, That, by the death of Bro. Joseph Calhoun, Harmony Lodge, No. 9, A. O. U. W., has lost one of its honored members in the prime of manhood, and one who looked forward to many years of usefulness to God, his beloved wife and family, our beloved Order, and to all mankind; but now

"The silver chord in twain is snapp'd,
The golden bowl is broken;
The mortal mold in darkness wrapped,
The words in CHARITY spoken;
And what for mourning man is left,
O, what is left but God?"

Resolved, That, by the death of Bro. Joseph Calhoun, his beloved wife and children have lost an affectionate and noble husband and father, and, therefore, we, of Harmony Lodge, No. 9, A. O. U. W., extend to the bereaved widow and family of our deceased brother our heartfelt sympathy in this their great affliction and distress, and commend them to our Heavenly Father, who doeth all things well, and who is ever our strong *Hope* and *Protection* at all times, and in all places. May they truly say and feel,

"What though in lonely grief we sigh
For him, beloved, no longer nigh,
Submissive still would we reply,
Thy will be done."

Resolved, That these resolutions be spread in full upon our Memoriam book, and that a copy, under the seal of the Lodge, be sent to the widow of our deceased brother, and that a copy be sent to the PACIFIC STATES WATCHMAN for publication. All of which is fraternally submitted in C. H. & P.,

FREDERICK BLIGHT,
JAMES MCCANN, } Com.
JOHN R. FISHBECK.

Oregon and Washington.

In the annual report of the Supreme Master Workman occurs the following paragraph:

In October I received a communication from the G. M. W. of the Grand Jurisdiction of Oregon and Washington, asking me to antedate the day that they were set apart as a separate beneficiary jurisdiction. He claims that the date should be fixed as of April 15, 1881, instead of June 1st, as formally announced by my predecessor. As this matter had been passed upon by the Supreme Lodge, I deemed it beyond my authority to interfere, holding "that it is not in the province of a Supreme Master Workman to perform any act of legislation, but that he must confine himself to discharge the executive functions of the Supreme Lodge when it is not in session." [*Sup. L. Cons., Sec. I. Art. 5.*] Owing to this difference of opinion, one assessment, claimed to be due from Oregon and Washington, has not been paid, the Grand Lodge officers having been restrained from paying it by an injunction from a State court. This question is submitted for your earnest consideration.

In connection with this subject, I respectfully submit whether it would not be for the best to follow the evident intentions of Article 6 of the Constitution, and require all petitions to be set apart as separate beneficial jurisdictions, to be received and acted upon by the Supreme Lodge when in session, with a view of leaving that body to definitely determine the date of separation. The plan heretofore followed has led to complications which should, in the future, be avoided.

THE new Ritual ought to have one short degree. A stomach pump for hard drinkers ought to be one of the working implements.—*Texas Knight.*

News in Brief.

THE German temperance element has called a German Temperance Convention in Chicago, on August 25th, and has elected two delegates to represent it in the National Temperance Convention, to be held on Aug. 23d.

DR. REEVES, Secretary of the State Board of Health of West Virginia, has received information of a new cattle disease in several counties of the State, and has ordered specific reports. It seems to be a contagious febrile affection.

COMMANDER PEARSON reports that no trouble is apprehended in Sitka between the Indians and the miners, and says the rumors are put in circulation by traders and rum sellers, who want a first-class man-of-war on the station because of the $6,000 or $8,000 disbursed.

SECRETARY CHANDLER cabled the United States Minister at St. Petersburg that Congress had made provision for bringing home the remains of Lieutenant-Commander De Long and his companions, and asked that he telegraph to Lieutenant Harber, at Irkutsk, to have sledges built to bring the bodies to Orenburg, where metallic cases will be found in waiting.

THE California Silk Manufacturing Co., whose factory was totally destroyed by fire in South San Francisco a few months ago, has decided not to rebuild in its old location. The company considers the Mission the most favorable location for the erection of a building, and, it is reported, has been negotiating for property. The building will be larger than the old factory. About $25,000 worth of new machinery has been ordered from the East.

A CONSPICUOUS feature of the markets during the past week was the great variety of fruit displayed. Both extremities of the season were represented. Among the varieties noticed were apples, peaches, apricots, pears, plums, prunes, pomegranates, crabapples, lemons, fresh and dried figs, limes, oranges, pineapples, nectarines, bananas, cantaloupes, tamarinds, currants, raspberries, blackberries, grapes of several varieties, strawberries, watermelons, and nutmeg and muskmelons.

The Rebellious Grand Lodge.

We give below an extract from one of the evening papers relative to the rebellious Grand Lodge of Iowa, and dated, Cedar Rapids, July 23d:

"The special session of the Grand Lodge, A. O. U. W., of Iowa, adjourned to-night sine die. It resolved that the Grand Lodge absolutely absolves itself from all connection and obligation to the Supreme Lodge of the United States, and that the Grand and Subordinate Lodges under its jurisdiction are declared to be separate and independent from said Supreme Lodge, for the purposes of the Order, as provided by the amended articles of incorporation. The ritualistic and secret work was changed and modified in full accord with the action of the Grand Lodge. This makes the Grand Lodge a purely beneficiary institution of Iowa men for Iowa men, and they intend, with their 9,600 followers, to carry out the plans and purposes of the Order to the letter. They are now carrying $20,000,000 of life insurance. The new Grand Lodge is said to be incorporated in Iowa, and its future is a matter of question. The Grand Lodge claims that it is ready to meet the Supreme Lodge in the courts if it opens litigation. Their action saves them over $1,000 annually paid to the Supreme Lodge heretofore."

It absolutely absolves itself from all connection and obligation to the Supreme Lodge! We wonder if they have heard yet out there that the Supreme Lodge, through its Master Workman, suspended that Grand Lodge long ago? It is quite probable that they did, but it is characteristic of them; they set their heads to the windward, and, closing their nearsighted eyes, neither saw nor heard. That insubordinate, untutored Supreme Lodge! Pooh! what has the Iowa jurisdiction to do with such a set.

Well, they ought to be well "absolved" by this time, and we only hope they will not conclude by suspending the Supreme Lodge. It is quite probable that they will do so, however. Further, "this makes the Grand Lodge a purely beneficiary institution of Iowa men for Iowa men." Characteristically selfish again. No doubt, if it were possible for every Iowa man to run an A. O. U. W. jurisdiction for himself, the whole Iowa lot would go into separate independent jurisdictions.

Again, "the new Grand Lodge is said to be incorporated in Iowa, and its future is a matter of question." There is no question about it. It has a perfect right, under the laws of Iowa, to incorporate and levy the relief assessment on its members, and collect it; at least, this is the recent opinion of the Attorney-General of Iowa.

Once more, "the Grand Lodge claim that they are ready to meet the Supreme Lodge in the courts if they open litigation." We advise both sides to keep out of the courts, but should feel sorry for the disloyal Grand Lodge in the outcome, if the courts must settle it. Besides, "their action saves them a 'whole' $1,000, annually paid to the Supreme Lodge heretofore." One thousand dollars is too much for 9,600 members to pay annually for the protection and fellowship of 100,000 brethren! Let us then leave them to wander alone.

BEWARE OF FRAUDS. — The unprecedented prosperity and general increase of fraternal and sick-benefit societies will undoubtedly bring to light a numerous class of imposters and benefit fiends, or chronics; yet, while we should be on the lookout for them, and follow them up until they are exposed, it should cast not one iota of reflection upon the system itself. The sick-benefit system is one of the best features of any fraternal organization. Hunt down the frauds!

GRAND LEGION SELECT KNIGHTS OF KANSAS. —The Grand Legion Select Knights of Kansas met at Topeka, July 19 and 20, 1882. The *Daily Commonwealth* says: "The session was one of great interest, and, it is thought, will be productive of much good to the Order throughout the State. The Knights, it is said, make a very showy appearance.

THERE is no lack of interest and no abatement of increase of membership in our city Lodges. From one to seven applicants in each Lodge weekly. Lodge visitations, social meetings, entertainments and anniversary celebrations are on foot and general prosperity is the order in California.

FIRE.—Lone Sycamore Lodge, No. 163, of Lemoore, recently sustained the loss of its hall, charter, regalia, paraphernalia, books, papers, etc., by fire, nothing being saved but the Recorder's book. A new charter and set of supplies have been forwarded, and the Lodge will soon resume business as usual.

BRO. JOHN TIERNEY, of Somerville Lodge, No. 210, A. O. U. W., called at our office, and made flattering reports as to the progress of the new Lodge of which he is the M. W. He expects a marked increase in membership this term.

"Pitch thy behavior low, thy projects high;
So shalt thou humble and magnanimous be.
Who aimeth at the sky
Shoots higher much than he that means a tree."

TWO MEN, while attempting to climb over the railing of the Tuileries gardens in Paris, during a display of fireworks on Monday night, caught hold of an electric wire used in the illumination of the grounds, and both were struck dead instantly.

Cream of Tartar.

Its Production and Uses.

Few industries on this coast have a greater future than the wine interest, which is already a prominent feature in our exports. It is necessary, of course, that every thing in connection with the wine should be utilized, as it is only in that way that our wine growers are enabled to compete with foreign producers, whose economy and thrift are so widely known.

Only a few years ago we were entirely dependent on foreign manufacturers for our supplies of cream of tartar, which is manufactured from argols developed in the manufacture of wine. Until within a short time, the wine makers on the Pacific coast cast the argols aside as being of little or no value. The establishment of manufactories which utilize this product is rapidly freeing us from our dependence on importations. While cream of tartar is used for numerous purposes, still, the larger proportion is used by baking-powder manufacturers, and there is certainly no reason why California, with its facilities for producing argols, should be dependent upon the East or Europe for supplies.

We recently called upon Messrs. A. Schilling & Co., the proprietors of the Pioneer Baking Powder Company, by far the largest consumers of cream of tartar on this coast, and, in a conversation with their chemist, in reference to what constituted a pure baking powder, we learned that cream of tartar and bi-carbonate of soda are the only ingredients that should be used in the manufacture of baking powder. To have the baking powder perfect, it is necessary to combine the cream of tartar and soda in such a way that the ingredients will neutralize each other, thus giving the proper action to them and producing the largest amount of carbonic gas necessary for baking purposes. To what extent the success of the baking powder depends on the proper combination of the two materials was proven to us by his having other baking powder, put up by other firms, which, although containing cream of tartar and soda only, did not develop the full amount of carbonic gas. This was owing, no doubt, to the excess of bi-carbonate of soda used; but whether this was due to the firms not being able to enjoy the services of a competent chemist to superintend the combination, or whether it was merely because cream of tartar being high in cost, while bi-carbonate of soda only costs one-sixth as much, was hard for us to determine.

We believe that home industries should be encouraged; the more it is done, the better it is for this coast; and institutions that are promoting home enterprises should be encouraged as long as they use legitimate means to increase their business. For this reason we sought Messrs. A. Schilling & Co., to get information in reference to the supply and demand of cream tartar.

The effrontery and mendacity of some large Eastern companies in introducing to the people on this coast, baking powders which contain a large percentage of starch, and endeavoring to push them on the innocent public by means of glaring advertisements and tricks deserves the condemnation of every right-thinking person.

When any portion of the cream of tartar and soda, which are necessary for the production of carbonic gas, are removed, it is absolutely necessary to replace it with some material possessing the power to produce the same effect. One of the most common articles used for this purpose is ammonia. It is a well-known fact that carbonic gas is produced in nature in many ways.

There is hardly a child that has not noticed the bloated condition of animal carcasses. This condition is due to the action of the ammonia in the animal developing carbonic gas, which causes the bloated appearance of the carcass. Ammonia being a product of organic decomposition, it is not a very nice ingredient in bread making, though, unquestionably, a very powerful gas producer. The manufacturers of baking powder, composed entirely of cream of tartar and soda, only, cannot compete with powders composed largely of starch and containing so powerful and nasty an element as ammonia, nor can they indulge in high-priced advertisements in praising the merits of a so-called "absolutely pure" baking powder. To persons desirous of informing themselves in regard to ammonia, we would refer them to the "United States Dispensatory," folios 112 and 114, where they will find a detailed statement of what it is obtained from, the details being unfit for publication here. We are certain that the public cannot be aware of the uncleanness of ammonia, or they would be more careful to avoid the use of baking powders that contain it.

A certain Eastern baking powder company has constantly kept its brand before the public, and has styled it as being "absolutely pure," and has recently published an elaborate diagram showing the strength of the different baking powders produced by large firms in the United States. These diagrams are being published broadcast over the country. This company manufactures a baking powder containing a large percentage of starch, and they use ammonia to replace the strength lost by the removal of the cream of tartar and bicarbonate of soda.

We are informed that this company has spent a very large amount of money in advertising their baking powder, and have taken pains to maliciously slander other brands that undoubtedly have more merit. The large profit made by this company, no doubt, justifies them in expending so much in advertising so extensively, while manufacturers on the coast, who are giving better value, and endeavoring to aid the industrial interests of the State, are not in a position, on account of the small profit they are making, to keep their brand of baking powder before the public in newspapers. These Eastern firms, however, are selling an adulterated article, and advertise on the principle that the party making an excessive profit can do more "blowing" than manufacturers of a better quality whose limited profit does not permit them to enjoy extensive newspaper advertisements. As a rule, houses putting up fine goods care but little for slanderous utterances, as they return, "boomerang"-like, to the injury of the originators. The "barking" of rivals, who are selling their goods as patent medicines are sold, can easily be answered by facts, and we understand that the manufacturers of a superior article of baking powder propose publishing the analysis of the baking powder offered by these parties, showing what their powder contains, if they persist in running down brands that they know are better than their own. Sworn statements of prominent chemists will soon explode their claim of selling an absolutely pure baking powder; but we will drop this baking powder subject until some future time when we can devote more space to it.

Cream of tartar is used to some extent for medical purposes, and there is also considerable consumption of it for cooking purposes, aside from its use, combined with bicarbonate of soda, as a baking powder. To all consumers who appreciate a pure article the development of its manufacture at home is a matter of interest.

We will, at some future time, endeavor to give our readers a full account of the manner in which cream of tartar is developed in wine making, and the processes through which it passes after leaving the wine maker's hands.

Rate of Mortality.

From the Carlisle tables of mortality, showing how many persons out of 10,000 will annually die on the average, until all are deceased, also the expectation of life at all ages, we take the following:

Out of 10,000, born at the same time, 1,539 will die the first year; 682 will die the second year, and so decreasing to the 12th year, when only 31 die; the death rate now gradually increases until the age of 42, in which year 71 die; from this age to the age of 55 the mortality is much diminished; in the 50th year only 59 die; in the 60th year, 122 die; in the 70th, 124; over 1,000 live to the age of 79; 445 to the age of 85; 142 to the age of 90; 30 to the age of 95; nine to the age of 100; seven to 101; five to 102; three to 103; one to 104.

The expectation of life at birth is 38 years; at the age of 5 years, 51 years; at the age of 10, 48 years; at the age of 15, 45 years; at 20, 41 years; at 25, 37 years; at 30, 34 years; at 35, 31 years; at 40, 27 years; at 45, 24 years; at 50, 21 years; at 55, 17 years; at 60, 14 years; at 65, 11 years; at 70, 9 years; at 75, 7 years; at 80, 5 years; at 90, 3 years; at 100, 2 years.

Of 10,000 born at the same time, 3,203 die during the first five years; 337 during the second five; 160 during the third five; 210 during the fourth five; 211 during the fifth five years; 237 between 25 and 30; 280 between 30 and 35; 287 between 35 and 40; 348 between 40 and 45; 330 between 45 and 50; 324 between 50 and 55; 430 between 55 and 60; 625 between 60 and 65; 617 between 65 and 70; 726 between 70 and 75; 722 between 75 and 80; between 80 and 104 the remaining 953 die.

From this we deduce that 32 % of the number living at birth die during the first five years; 5% of the number living at the beginning of the second five years die between the ages of 5 and 10; 2.4 % between the ages of 10 and 15; 3.3 between 15 and 20; 3.1 % between 20 and 25; 4 % between 25 and 30; 4.9 % between 30 and 35; 5.3% between 35 and 40; 6.1 % between 40 and 45; 7 % between 45 and 50; 7.4 % between 50 and 55; 11 % between 55 and 60; 17% between 60 and 65; 20% between 65 and 70, 32 % between 70 and 75; 43 % between 75 and 80, and 100 % between the ages of 80 and 104, the percentage being computed, of course, on the number living at the beginning of each period. These figures are presented for the benefit of any one who desires to investigate.

C. Waller & Bros., one of the leading grocery houses of this city, have removed to their new store, 1731 Market, at the Market St. junction. Bro. Chris. Waller has been Receiver of Valley Lodge since its organization, and knows how to keep a grocery store. Families wishing anything in their line would do well to call on this well-known and reliable firm for supplies of groceries, coal, wood, etc.

BRO. JOHN H. CARMANY, No. 25 Kearny street, has one of the most extensive, varied and satisfactory lines of men's furnishing goods in the city. The most fastidious will be suited here, and it is widely known that Bro. Carmany has one of the best shirt cutters to be found. He is truly skilled in his business, and supplies the best trade in the city.

LET him that would do good reflect that, while he forms his purpose, the day rolls on, and the "night cometh when no man can work."

Management of Saws.

Heating spoils saws. Some sawyers will run a saw until it is tremendously hot, and, to make it worse, they throw cold water on the side, thus causing sudden contraction on that part of the saw, and after a few such times, the saw has to go to the factory to be hammered and put in order, and to come back to meet the same fate as before. If the saw is round, hangs true in mandrel, is in line with the carriage, filed square at top and bottom, the backs of the teeth lower than the points, with the required amount of spread set and the teeth kept well chamfered with a gummer, so that when the saw runs, only the point will come in contact with the lumber, then a saw will run free and cool and there will be no extra strain on the plate, no heating nor danger.

The causes of bursting of saws, in our opinion, are: 1. Square corners at bottom of tooth. 2. Out of round, with the backs higher than the points, so that instead of cutting, they scrape the dust off with the back. 3. Undue strain put upon the saw by the plate rubbing against the log, causing it to heat, which takes the life out of a circular saw.

Where inserted teeth are used and the power is light, every other tooth may be taken out and a worn out tooth put in too protect the jaw, Mills with less than 20-horse power, if the saw is put in good order, will cut 1,000 ft. more per day with every other tooth out than with the full set. Each tooth will take out one-eight inch almost as easily as one-sixteenth; that is, a sixteenth-horse power will do with a half set nearly as much as a 20-horse power will do with a full set of teeth. I have run saws where each tooth cut a trifle over one-half inch in hemlock. Saws that lap over into the log when in line with the carriage, want more set; saws are very apt to lay to the log when the set is out, especially on heavy feed. —*Indianapolis Mechanical Journal.*

Origin of Atmospheric Electricity.—Van der Mensbrugghe recalls the experiment, which was made in 1816 by Dessaignes, of plunging a rod of glass into mercury. The electricity which is shown was attributed by the experimenter to the friction of the glass against the surface of the mercury, but Spring found that if the surface of the mercury is covered with lycopodium, so as to diminish the friction, the electricity remains the same. It has, however, been found to vary with the temperature and with the degree of oxidation of the mercurial surface. Mensbrugghe demonstrated, five years ago, that every liquid mass, of which the surface is expanding or contracting, becomes the seat of a thermo electric current; if the variation of surface is produced near a bad conductor, such as glass or air, the current excites phenomena of static electricity. This hypothesis greatly facilitates the explanation of atmospheric electricity, provided that the spherules which constitute mist and clouds are constantly undergoing great variations of surface. Many of the luminous phenomena which accompany the shower of mercury, when forced through a porous cup by atmospheric pressure, or when shaken in a glass vessel in a darkened room, confirm these views, and they may be regarded as a natural introduction to the study of the development of atmospheric electricity, a question of great interest to investigators in all countries.—*Bulletin of the Belgium Acad.*

Production of Organic Compounds by Electrolysis.—The experiments of Bartoli and Papasogli have been extended to the electrolysis of a lye of soda or potash by the aid of four to six large Bunsen cells, yielding hydromellate and probably also pyromellate. Upon the positive electrode little gas is disengaged, but there is a large accumulation upon the negative. The weight of the carbon diminishes but little. In mineral acids, such as sulphuric, nitric and hydrochloric, six cells are sufficient to transfer some kilograms of carbon to the positive pole. After filtration the liquid does not turn brown; the deposited carbon is a black substance with a conchoidal fracture, and presenting, upon its broken surface, a brilliant substance which is not produced in the alkaline liquids, and which, in oxygen, is converted, at the ordinary temperature, into mellitic acid and its derivatives. This substance dissolves slightly in water—better in warm water—and is precipitated by acid. and mineral salts. It is also soluble in alkalies and concentrated sulphuric acid, from which it is precipitated by water. This substance is called mellogene or mellitogene. It is also produced in the decomposition of formic, acetic and oxalic acids.—*La Lumiere Electrique.*

Breaking Iron with Dynamite.—The application of dynamite to the breaking up of masses of iron too great to be broken by other means, was successfully tried near Chicago recently. A refractory chunk, "salamander," of 20 tons weight, was placed in a pit. A hole was drilled in the iron, and a charge of dynamite was inserted. Several bars of iron, weighing tons each, were placed over the pit in order to prevent small pieces of the metal from flying heavenward. The cartridge was connected with a battery, stationed 100 ft. from the pit, and after the spectators had found secluded places, the word was given, and in an instant the 20 tons of iron that had previously stood all kinds of hammering, was reduced to fragments. The steel men were completely surprised, and admitted that a feat was performed that before was held impossible.

A New Material for Fruit Cans.—Leatheroid is a new article which is being made of paper. It consists of a number of thicknesses of cotton paper wound one upon another over a cylinder. The remarkable qualities of strength and adhesion it possesses are derived from a chemical bath, through which the paper is drawn on its way to the cylinder. The effect of the chemical bath on the paper is said to be wonderful. Leatheroid, for the purposes it now serves, consists of about 20 thicknesses of paper; it is shaped upon or around molds, while wet, into the form it is to represent, and will hold that form perpetually when dry. When dried, it is as difficult as rawhide to cut with a knife. A company has been formed at Kennebunk, Me., for the manufacture of this article, and will at once build a large mill there for that purpose. This company is making, for introduction into the mills, roving cans, boxes, etc, to take the place of tin cans and wooden boxes. Cans made from this material are about one-fourth the weight of tin cans of equal size; while tin cans are liable to get bent, cans made from leatheroid are entirely free from this objection. They have the elasticity of thin steel, and no amount of kicking or hauling will break them. Orders have already been received from several large mills for their roving cans and boxes, which are made seamless. This substance is also used for covering pulleys to a large extent, making one of the smoothest and most lasting coverings which can be obtained.

Submarine Work.—Thanks to the enterprise of an English firm, the submarine diver of the future is likely to have all the advantages which Jules Verne gave to the divers in his wonderful work, "Twenty Thousand Leagues Under the Sea." Our readers will remember that there the divers are represented by the author as putting on their armor in the usual fashion, and then attaching oxygen reservoirs at the back, going into the water free and independent of air pumps and heavy-dragging air pipes. The new system calls for the manufacture of oxygen and its compression into tanks, which are strapped upon the armor. The carbonic acid of the breath is removed by means of caustic potash, and a fresh supply of oxygen takes the place of that used up by breathing. The diver is, of course, entirely independent of the surface, and can walk about as much at his ease as it is possible beneath the surface of the water, weighted by the usual amount of lead necessary to keep him submerged. The system is one of the most interesting things in its line that has been brought before the public for many years, and submarine work will be greatly benefited by it. No doubt some time will be necessary to understand practically all the details of its working, as the system is not presented as being in a sufficiently practicable state to be in every-day use away from skillful attendance.

The electric light appears to be making most wonderful strides in the direction of success for general illuminating purposes. It is only within two or three years that it has been turned to practical use on a large scale; but already there is said to be, in England, France and the United States, an aggregate of more than $100,000,000 of capital represented in the introduction of this light and manufacture of the machinery and apparatus required. More than half of this immense sum, real or nominal, has been invested in America, where it is stated that over 50 companies have been incorporated. The actual cost of the plant and operating expenses can only be estimated from these figures, but must reach an enormous total. This is but a single example of the manner in which fresh channels are constantly being opened for the accumulated wealth, and new employments furnished for the labor of the country. Between the wants of a civilized community in these times and its few and simple requirements a hundred years ago, there is a wonderful and instructive contrast.

A Novel Steam Engine.—This important improvement in steam engines appears, even to many experienced engineers, a sort of mechanical paradox. With but one crank, with two cylinders cast in one piece, and only one valve chest, the entire engine is as simple and few in parts as the simplest of ordinary single cylinder engines. It has no dead centers, but will start forward from any possible position in which it may be placed. Further, it may be stopped, started and changed from a single to either a double or compound engine, as may be desired, by the motion of a single lever, and the change to either form may be made while it is moving at any speed, just as easily, it is asserted, as when it is still. The engineer can run it with one cylinder as a single engine, or with both cylinders, using live steam, as a double engine, or with one cylinder, using live steam, and the other running by the expansion as a compound engine, either way as economically as any engine especially built for that particular way.

Tenoning.—The *California Architect* says that "theoretically, a single tenon is stronger than a double one, and its mortise also weakens the timber into which it is framed less than two mortises would. Practically, a double tenon would be used with a joint bolt for drawing the framing together, placed between the two tenons; or it might be advisable to use two tenons to diminish the effect of shrinkage, as for instance in a door, where a double tenon often answers better than a single one."

New and Cheap Method for Enameling Water Pipes.—Two inventors in Bohemia have patented a direct process for enameling cast-iron pipes, which can be applied to other hollow castings that are made with cores. It consists in simply covering the sand core with the enamel and then pouring in the iron as usual. The heat of the melted iron fuses the enamel, and it attaches itself firmly to the iron, and detaches itself so completly from the sand that the enamel is said to be all that can be desired for water pipes and other industrial purposes. In casting sinks, basins, urinals, etc., the enamel can be applied to the sand on that side of the mold which is to form the inside of the basin. The composition of the new enamel is kept a secret; but it is said to differ from the old form in the simplicity of its preparation and the extraordinary cheapness of the materials used. It is so cheap that it has found very extensive use in many branches of industry.

In color this new enamel is gray. It will be useful for gas pipes as well as water pipes, because it will make the pipes absolutely tight by this glassy lining, It will be no less useful for soil pipes, which are always liable to corrosion from the gas they contain, but for conveying acid liquors like mine water, and in chemical works, for sinks and waste pipes in chemical laboratories, it should displace lead, glass, or terra-cotta.

Zinc in Bronze.—The Society of Architects of Berlin have been investigating the causes which make some kinds of bronze become black. The fact has been remarked that a statue in Berlin, called "Old Frederic," had become covered with a darkish layer, whilst an old cannon before the arsenal had retained its fine green color, the two having been exposed to the same atmospheric actions. Upon being analysed, the bronze of the cannon was found to consist of nine parts copper and one part tin. The bronze of the statue contains a good percentage of zinc, and to zinc the change of color is ascribed. In order to ascertain if this was really the case, several copper alloys were subjected to the action of a copper solution. The alloys of tin and copper alone, took the green color, whilst the alloys containing zinc became more or less black, according to the quantity of zinc they contained.

The Steam Engine.—Taking the best types of engines of to-day as a starting point, we must depart in the following directions: We do not particularly need to increase the efficiency of the boiler as an evaporator, but we must increase its ability to withstand pressure without increasing its cost. We must decrease the friction of the engine and of the machinery of transmission to the point where the useful work is delivered. We must produce better vacuums in the condenser, and diminish its cost. We must diminish the cost of the engine. We must diminish the cost of the attendance on engines, boilers and machinery, and of lubrication. We must increase the durability of engines, boilers and machinery. Coal is too cheap even now to admit of increased economy of it at the cost of increased outlay for plant and attendance.—*Mechanical Engineer.*

Hydraulic Riveting.—The advantages of hydraulic riveting are described as follows in the journal named below: "Under the enormous pressure of the hydraulic riveter, the iron of the rivet is crowded back over its whole length, and welds to fill the void exactly, whatever may be its shape, so as closely to unite the plates, even when they are numerous and of considerable thickness. The grip is so strong that all the seams disappear, and after the riveting is done, the plates, course-irons and rivets seem to form but a single piece. The rivets of the mounting bolts can be removed by hand." Messrs. Greig and Eith, in 1879, reported the following comparative resistances: Hand riveting, .405; steam riveting, .509; hydraulic riveting, .559. These figures are evidently in favor of the hydraulic riveting.—*Le Genie Civil.*

The increasing cost of wood for constructive purposes and for railroad ties, is one of the most serious problems which confront the managers of railroads. Processes of preservation of wood have been tried with more or less success on nearly all of our trunk lines. The latest method suggested for the preservation of bridge timber and ties, consists in subjecting the finished timber first to dry heat, and then immersing it in a hot bath composed of asphalt and carbolic acid. On cooling, the solvent of the asphalt evaporates, leaving a skin or coating of asphalt on the surface of the wood that resists water and keeps the antiseptic material locked within the pores of the wood. The exterior of the wood presents a smooth and dark surface, requiring no painting. It is understood that the process is to be used on a large scale on one of the Canadian trunk lines.

Chinese Steel.— A considerable steel-making industry exists at present in China, on the upper Yangtze, whence the steel is sent to Tientsin for shipment and distribution. It realizes much higher prices than the Swedish steel imported into the country. The Chinese metallurgists recognize three kinds of steel, viz., that which is produced by adding unwrought to wrought iron while the mass is subject to the action of fire; pure iron many times subjected to fire, and native steel, which is produced in the southwestern parts of the country.

New Antiseptic Compounds.—The Homer (N. Y.) *Republican* says: "While on a visit to Marathon, we had occasion to visit the pharmacy of T. L. Corwin, and while there was shown a preparation which he manufactures for preserving food. Its effects are wonderful. Meat which was four weeks old was as fresh and sweet as though brought directly from the market. Milk, butter, fruit, oysters, and, in fact, everything can be kept in a good state of preservation by its use." Antimerulion is a new preparation made in Germany by Dr. Zerener, for preventing mold, mildew and dry rot. It is produced in three forms. The liquid compound, of 30° B., consists of boracic acid, common salt, and silica, and is applied by means of a brush or pencil to wood-work or masonry. In factories where moist fumes and vapors are evolved, which favor the production of mold and fungus, this acts as a protection for the building. The so-called doubly prepared antimerulian is made of infusorial silica with the addition of 30% of boracic acid. It is to be scattered in moist or damp places. The simple antimerulion contains, besides the infusorial earth, only 8% of boracic acid. It is less active, and is used principally for protecting moist places from mold, for insulating materials, and for excluding the heat of the earth and of the air from ice cellars and ice chests. It makes a good covering for water pipes and heating appliances. In places where mold and dry rot are feared, the antimerulion is packed in.—*Oil and Drug News.*

A Dangerous Cigar Lighter.—Street hawkers in some of the Eastern cities, have lately taken to selling a "magic cigar lighter," which is calculated to do much mischief. As every student knows, the affinity of sodium for oxygen is so great that it will take the coveted element from water with such rapidity as to cause it to burst into flame. The new lighter is a thin strip of sodium, a fragment of which when placed on the end of a cigar and touched with water, burns with great vehemence. Few of those who buy the little vials of lighters are aware what vials of wrath they may turn out to be if unskillfully handled. The burning sodium will make an ugly wound if it comes in contact with the skin, which is likely to happen from the sputtering way it has. A sweaty finger is enough to set the stuff ablaze, or a sweaty pocket, should the cork of the bottle chance to come out. As the lighters are bought chiefly by the ignorant, who are taken by the seeming miracle of producing fire by the direct action of water, it is a wonder that no serious accidents with them have been reported. The traffic is not one to be encouraged.

Alteration in Flour Through the Action of the Sun.—It frequently happens that wheat or rye flour, in spite of the greatest care in baking, yields an inferior loaf, and the failure is commonly attributed to adulteration; but when submitted to investigation neither microscopic nor chemical tests reveal any adulteration. Such flour is returned to the miller or dealer as unfit for use. The miller says the flour was injured by the heating of the stones, and the dealer attributes the defect to the circumstance that the sun must have shone upon the sacks during transportation. It has been proved by numerous experiments that flour cannot bear the action of the sun, even when not exposed directly to its rays. When flour is exposed to the heat of the sun an alteration takes place in the gluten similar to that produced by the heating of the stones. For this reason it is advisable that the transportation of flour should take place, if possible, on cool days or by night, as well as that flour should be stored in a cool place.

Test for Sperm Oil.—If kerosene oil is added to sperm oil, it will prevent the latter from gumming. Mix thoroughly 100 parts of oil with four parts of chloride of lime and 12 parts of water. Now add a small quantity of the decoction of oak bark to destroy all traces of gelatinous matter still remaining, and allow the impurities to settle. Next agitate the clear part with a little sulphuric acid, settle once more, and remove the acid by washing, and see to it that none of the acid remains. If the oil shows any signs of becoming rancid, it ought to be boiled with water and a little bicarbonate of magnesia for about 15 minutes, when it will likely lose the power to redden litmus paper. — *Mechanical World.*

Designs on Glass.—The following is an ingenious method of obtaining mirror-like designs on glass, devised by Leclerc: The glass, having been silvered by the chemical process, is coated with a thin and uniform layer of sensitive bitumen, and this is exposed under a transparency. The next step is to wash away the unaltered bitumen with oil of turpentine, so as to leave the bituminous design on the silvered glass. The application of moderately strong nitric acid removes the silver, excepting where it has been protected by the bitumen, so that the metallic design shows like a mirror from the reverse side of the glass. The plate may be backed by paint or any other suitable material.

A Convenient Chess Board.—An iron chess-board, provided with magnetic chess-men is a Berlin novelty. The small magnets concealed in the figures cause them to adhere to the iron board and retain their places in spite of considerable shocks, such, for instance, as are received on shipboard or on railway trains.

The Redwood Industry.

We give on this page a sketch which may suggest the redwood industry and call forth some comments upon its extent and the value of the timber prepared for use. Of redwood lumber and timber it may be said that it is the mainstay of our carpentry and building, and its production is a leading source of wealth in several of the coast counties. This may be inferred when we cite the figures of redwood production for 1881. The following is the total mill shipment as furnished us by the Secretary of the Redwood Manufacturers' Association:

	Feet
Rec'd in San Francisco bay	95,414,556
Shipped from Mills to other points, foreign and domestic	35,051,158
Total mill shipments	130,465,714

The value of this lumber, figured at $18 per M is $2,348,370, which is certainly a respectable amount when it is considered that it is for one variety of timber.

Redwood has many excellent qualities, but one which we would especially emphasize at this time is its durability, as this has been called in question by correspondents of Eastern papers. We can best demonstrate its lasting qualities by the enumeration of instances which have been reported to us by one who is well informed in the manufacture and use of redwood.

There is now standing in Santa Cruz a split picket-fence built in 1841, by J. P. Springer, of redwood pickets, most of them one inch thick, and it is perfectly sound to-day.

Redwood fences made of split pickets, at Trinidad, in 1852, are sound and still in use.

F. P. and J. A. Hooper, in building a railroad at Trinidad, were obliged to fell a redwood tree 150 ft. high and 10 ft. in diameter, which had grown up beside a fallen redwood tree, and the roots of 10 inches in diameter had grown over the fallen tree. The fallen tree was found to be sound, and stringers for a trestle were cut from it.

At Fort Ross, on Myers & Bennet's property, there is a corral of hewn redwood and fences built by the Russians 60 or 70 years ago. The ends of the timbers and fence posts which are in the ground are sound to-day.

At the corner of Montgomery and California streets there is a piece of redwood pavement that has been in use for 20 years. The durability of redwood depends upon the place in the tree from which it is taken. Near the butt the wood is full of sap and very heavy and dark-colored, and will last indefinitely. The lumber men say that redwood which will weigh five pounds to the foot, board measure, will not rot in 50 years. The lumber nearer the tops of the trees is soft and not so durable as the butt, and yet even the top redwood will outlast pine when exposed to the elements or in contact with the earth. There is a corral which was built 30 years ago from the timber from a single tree. The man began cutting and setting posts from the butt of the tree upward. The first posts to rot were from the top of the tree and the decay followed around the corral until the posts from the lower end of the trunk were reached, and they are sound now.

Redwood has come into request for export eastward, where it is used in panels for its beautiful color and grain. It is also coming forward in fine cabinet work in our own State for beauty rather than hardness.

THE LUMBER INDUSTRY—HAULING REDWOOD FROM THE FOREST.

Attraction of Metals at a Distance.—M. Pellat has lately observed that the surface of a metal undergoes an alteration in its nature, by the neighborhood of another metal, at ordinary temperatures. This alteration has been shown by measuring the difference of potential, between the surfaces of the two metals. If one of them is placed in the neighborhood of a third influencing metal, while the other is removed from that influence, it is immediately found after withdrawing the influencing metal that the difference of potential between the two primitive surfaces has changed. This modification requires some minutes to become sensible, and increases with the duration of the influence, until it reaches a definite limit. When the influence ceases, the modification diminishes rapidly at first and then slowly. The amount of variation depends upon the influencing metal. The most striking effects have been obtained with lead and iron; copper, gold and platinum produce effects which are slightly less; zinc produces no change. M. Pellat attributes this modification to a volatile body or vapors emanating from the influencing metal, which would be deposited upon the influenced metal, and would thus change the nature of its surface.—*Les Mondes.*

Experiments with the Heliograph.—A detachment of 19 men of the Sixth Cavalry and Twelfth Infantry, near Fort Grant, Arizona, under command of First Lieut. M. P. Maus, First Infantry, has been testing the practicability of heliographic signaling since July 1st, and it is pronounced a grand success. Lieut. Maus has signaled messages from the top of Dos Cabezas mountain to Fort Grant, a distance of 40 miles, which were read at once by his party at Grant. Messages can be sent with the heliograph at the rate of from 6 to 12 words per minute, according to the ability of the operator, and it is a splendid substitute for the telegraph, should the Indians cut the lines, which they have been doing, and always can do, when on the war-path, while they cannot cut a sun flash. It is understood that heliograph lines are about to be established by Lieut. Maus, and partly under direction of Col. Bracket, commanding scouting operations connecting Bowie, Grant, Thomas, Apache, and points along the Gila river, in the vicinity of Solomonville and Clifton, enabling troops in the field to be in constant communication with one another, without waiting for couriers or the proximity of a telegraph office. The signalmen, on account of their elevated positions, are enabled to observe, with their glasses, the movements of the hostiles, and in a few minutes to communicate it to any command in the field, each of which is always to be accompanied by one or two heliographic signalmen. The great advantages of this system of transmitting messages in a mountainous and hostile country are self-evident.—*Cor. Morning Call.*

Vibrations Produced by Railway Trains.—Prof. H. M. Paul has communicated to the Seismological Society of Japan some interesting notes on the effect of railway trains in transmitting vibrations through the ground. A box, holding about 20 lbs. of mercury, thickened by amalgamation with tin, was placed upon a heavy plank screwed to the top of a post sunk four and one-half feet into the ground. Images reflected in the surface of the mercury were observed by a telescope, as in meridian observations. An express train, passing at a distance of one-third of a mile, set the surface of the mercury in confused vibration for two or three minutes. Other observations were made at stations at somewhat greater distances. The experimenter also found that a one-horse vehicle passing along a graveled road 400 or 500 ft. distant caused a temporary agitation of the mercury whenever the wheels struck a small stone.

The Mechanical Equivalent of Heat.—Signori Cantoni and Gerosi have determined the mechanical equivalent of heat, by allowing a mass of mercury to fall from a hight and suddenly checking it at known distances, and measuring the increase of temperature at each distance. The mean results obtained agree closely with those obtained by Dr. Joule.

Architecture of Animal Life. The architecture of animal life is infinitely more marvelous, and oftentimes more beautiful, than the most gorgeous edifices reared by the hand of man. We look with astonishment—if we think while we look—on the temples and palaces and gigantic constructions of every kind, which his skill, his intelligence and his industry have raised; on the wide-swelling dome, be it of stone or glass; on the graceful, tapering spire, boldly shooting upwards into the sky; on clustering columns; on ponderous arches, whose shoulders might sustain a mountain. We see stone compactly and symmetrically fitted to stone, each of its appointed size and in its appointed place, while the chisel of the sculptor enriches them with cunning workmanship, and transforms the shapeless blocks into elegant proportions, and puts on them the undying impress of beauty; weaving out of stone and marble garlands of flowers and types of all things lovely, such as those with which the Deity himself has adorned the great temple of nature—the visible world of His own creation. All these are the works of reasoning, educated man, who builds according to rules and laws which science teaches. But if we pass from them to the structures of the lower creation—the "homes" made "without hands"—we see far more reason for wonder in what instinct alone has taught the bee and the ant, the reptile and the bird, to form, each for its own purposes of safety and domestic comfort.—*Art Journal.*

The Fluid Density of Metals.—A paper on this subject was lately read before the London Physical Society, by Mr. T. Wrightson and Prof. W. Chandler Roberts, F. R. S. The results were obtained by the process described in a former paper to the society on the fluid density of bismuth. The mean results were: For copper, 8 217; lead, 10 37; tin, 7.025; zinc, 6.48; silver, 9.51; iron (No. 4 Foundry Cleveland), 6.88. These results are slightly less than those given by Mallet's process, but they are sufficiently close. For bismuth, the fluid density found by the authors is 10 055, which is slightly more than that given by Mallet's method (9 82). The authors consider their method satisfactory. It consists in suspending a ball of the solid metal from a spiral spring, and allowing it to dip into a crucible of the same metal in a molten state. The movements of the spring as the ball melts are recorded by a pencil on a band of traveling paper.

Prof. Nordenskjold, during his Arctic voyage, was perplexed by the question, what becomes of the bodies of animals which die a natural death? He very seldom found such remains, and declared that on Spitzbergen it was easier to find vertebræ of monster extinct reptiles than the bones of the seal, walrus or bird of the present day. The problem is yet unsolved.

How Fish Find Their Own Rivers.

The long-held and only recently-rejected theory, that the shoals of fishes move in a vast mass along the coast, sending off detachments into each river as they passed its mouth, is to be attributed to John Gilpin and some other authors, who have written flowingly on the subject. The recent careful investigations of naturalists, indicate that the fishes, entering the rivers and bodies of fresh water from the sea, do not have an extended range in the ocean, and that each river's colony remains, after returning, in the deep waters opposite their river.

The motive for the movement of these shoals of such fishes, or rather how it is incited, has scarcely been explained. The life of the fishes has always been a mystery. It is not a search for food, as they do not eat while in fresh water; the opening of hundreds of stomachs will fail to find food present. It is an easy disposal of the question as to how each colony recognizes its native river, to say that "it is instinctive." So it is, also, when the butcher's horse recognizes the familiar gates; but we have some evidence as to what senses he uses. The fishes, probably, prompted by functional disturbance, from the tumid ovaries and spermaries, are incited to movement. The courses of the sea, unmarked as they are, are within each colony's limit, their habitual pathways. An unerring capacity in the fish for finding its own river may be more than that which guides the hermit crab to the shell of the *nautica*. The latter goes to hide its sensitive body, with an apparent nervous trepidation at its unprotected condition. The former, with a uneasiness of body from the functual changes it is undergoing, is impelled to activity. The transmitted habit of ascending the stream is, as it were, blended and alloyed with the substance of the nerves, and aroused by its condition, carries it, without conscious purpose, into the river of its progenitors and its own. The impulses of the fish are only in a slightly more complicated series than those of the crab. That it should be the instinct for a specific stream, established through inheritance of many generations, is easier to understand than that it is a scrap of memory of the place of its immature life, as the theory of fish culture makes it, and as observation seems to sustain.

In the waters of the Delaware, where there were no salmon originally, the young salmon placed in Bushkill creek returned after five years, and were taken, not only in the Delaware river, but the larger number in the neighborhood of Bushkill creek. It is not essential that all the fishes should have this impelling influence, whatever it may be, as like gregarious mammals and birds they flock together, following the leadership of whichever for the time takes it. The idea is suggested that the senses may be the guiding agent, that a fish goes nosing along the coast, or tasting the streams, until it recognizes its own. The convexity of the cornea must afford the fishes a very limited range of vision. The supposed dullness of the sense of smell and of taste in fishes might alone dispose of the suggestion that these are employed. The following occurrence, however, would seem to decide to the contrary. The Russian river, emptying into the Pacific, north of San Francisco, had its mouth entirely closed by the waves during a storm. The colony of salmon made their yearly migration from the deep waters toward the mouth of the river, and many of them raced through the surf, and landed high and dry on the sand that walled them out from their native river.

The migration of the salmon into some of the Pacific rivers is a frenzied advance over shoals, rapids and cascades, far into thin streams and brooks, where they arrive battered and weary, to accomplish their exhaustive reproductive labors, and drop back, the sport of the currant, dead and dying, toward the sea.—*Harper's Magazine.*

Clearing the Channel of the Mississippi.—It has been suggested that Government should subsidize the Mississippi River steamers, etc., to drag disk chains after them when going down stream, and in that way keeping the sedimentary deposits constantly agitated, or in a state of semi-solution, which following vessels would work over a wider range, and thus not only clear out the channel of that river, but prevent any further accumulation. This experiment is considered worth the cost of a trial.

Electricity has been applied to pile-driving, a water wheel furnishing the power, which is transmitted by two dynamo-electric machines with connecting wires to the pile-driver at a considerable distance away.

PACIFIC STATES WATCHMAN.

Favorable to Advertisers.

By consolidating the large subscription lists of the *Pacific Workman* with the PACIFIC STATES WATCHMAN our advertisers gain an unusually great advantage. We doubt if any one weekly newspaper has ever been circulated to as many different readers on this coast, as have been served heretofore by the *Workman* and WATCHMAN together. It is certain that no other periodical is now patronized by a better class of industrial, professional and business men. In fact, our subscription list embraces many of the foremost business and representative men throughout the towns cities of the coast.

We have pride in making our paper "clean and handsome," and first class in all respects—to the benefit of both our readers and advertisers.

OFFICIAL RECOMMENDATION.

Resolutions adopted by Grand Lodge of Cal., Feb. 3, 1881

WHEREAS, the PACIFIC STATES WATCHMAN, the pioneer A. O. U. W. advocate on this coast, without official aid, has long rendered able and valuable services for the good of our glorious organization, we earnestly recommend that our Lodges and the brethren individually patronize the WATCHMAN as liberally as circumstances will justify.

WATCHMAN PUBLISHING CO.

ADVERTISING RATES.

One Square (½ inch), per issue	$ .75
One Square per month	1.25
Two Squares, per issue	1.50
Two Squares per month	2.50
Obituary notices and resolutions (with 25 copies post-paid for friends of deceased) per sq. (½ inch)	50

☞For reading notices, extraordinary display, special advertising and choice places permanently, extra rates will be charged. Reasonable reduction will be made for large and long-continued advertisements. No extra rates for the space occupied by engravings.

Entered at San Francisco P. O. as second-class matter

San Francisco, - August 15, 1882.

Fraternity.

Let us never forget, brethren, that our whole system is bound together by kindness and fraternal regard. Though it is true that the A. O. U. W. is essentially a business institution, yet ordinary business is conducted on selfish principles, wholly and entirely. It knows no friends, it has no sympathies for the poor, the down-trodden or oppressed. It hears not the cry of distress, nor heeds the wolf of want that stands, with drooling mouth and gleaming teeth, at the door of the widow and the orphan. Unlike charity, it seeketh its own and will not be restrained. Therefore, brethren, be watchful, and seek not to cast your burdens upon a brother. Take away fraternity, and what remains? A plain, cold, uncharitable organization; in fact, nothing but an old-line insurance company.

If brethren just run to their Lodges to pay their assessments and be off again, they are selfish; or, if they do not go at all, or seldom, they are selfish. They want to put the work, the social and fraternal features, upon a few, to whom, doubtless, they rarely give encouragement. We are a brotherhood, a great fraternity for practical and humanitarian purposes; while we protect the weak, let us reach out the helping hand in the daily avocations of life, and remember that the Lodge-room is our stronghold, our fort, our headquarters. Then let us work, heart to heart, shoulder to shoulder, in our great brotherhood; even to touch elbows in this great circle would send a thrill of joy to many a broken or frozen heart.

It should be the bounden duty of every man to join some beneficial society. The vicissitudes of life are various. Seeming prosperity to-day may be turned into want and privation to-morrow. Five cents laid aside every day will provide plenty, and even luxury, for the helpless wife and little ones; and, when the last sad hour has arrived, and we must part from those who look to us for protection, what a sweet consolation it will be to know that they will be provided for. Cities may moulder, pass into decay and be buried in rubbish, thrones totter, and dynasties be only remembered in history, but the tenets on which our Order is founded will live, among good men and true, until the heavens shall be "gathered together as a scroll."

BRO. F. S. POLAND, District Deputy, will hold a series of District meetings during his term of office; and although these meetings will be, in a measure, a gathering of the members in his district, any brother Workmen from Lodges outside of his district are invited to be present. The first meeting has been appointed in Harmony Lodge, Pythian Castle, on Saturday evening, August 20th.

A GENERAL union meeting of brethren of Oakland will be held with Keystone Lodge, No. 64, this evening, August 15th, at which the Grand officers, and others of note in the A. O. U. W., will be present. It is expected that large delegations will be present from this side of the bay.

About Cards.

What was said in the former issue of this paper in relation to clearance cards, had reference solely to the transfer of members from one Lodge to another in the same beneficiary jurisdiction.

Where a member applies to join a Lodge in a different jurisdiction from that issuing the card, the requirements are entirely different from those in the first instance, for the reason that the one jurisdiction is to be relieved of all responsibility on his beneficiary certificate, which the other must immediately assume when the transfer is concluded. Therefore, the requirements are these:

1. A new medical examination and favorable report of the Lodge physician.

2. An application for deposit of card, accompanied with the card and the Medical Examiner's report, must be submitted to the Lodge he desires to join, with the fee required by the by-laws of the Lodge.

3. A Committee of Examination must be appointed, whose duty is the same as in the case of an applicant for transfer in the same beneficiary jurisdiction.

4. The Medical Examiner's report must be passed upon favorably by the Chief Medical Examiner or Examining Board.

5. When all these conditions are complied with, and official notice received from the Lodge granting the card, then a ballot shall be had, and if not more than two black balls appear, he shall be declared elected.

6. When elected he must present his beneficiary certificate and cancel the same, from which time he becomes a member of the Lodge, and not before. The beneficiary certificate must then be immediately forwarded to the Lodge granting the card, to be sent from thence to the Supreme Recorder or Grand Recorder, as the case may be.

7. He must then deposit one dollar in the beneficiary fund, to be ready for the next call on the fund after he becomes a member. This is necessary, because when a member is transferred from one jurisdiction to another, his "beneficiary fee" does not follow him, but is forwarded to the Supreme Recorder or Grand Recorder, as the case may be, of the jurisdiction he left, on the first remittance of that fund by the Lodge to which he formerly belonged.

He is liable on the first assessment called in the Lodge of which he last became a member, as otherwise he would be entitled to benefits for which he had paid nothing. We are aware that a different ruling on this point was made in the jurisdiction of Oregon and Washington Territory, but it is plainly erroneous in principle, and contrary to the letter of the law.

A member loses none of his acquired honors by transfer from one jurisdiction to another, nor does his age affect his eligibility.

In case of rejection, any moneys the applicant may have paid into the Lodge, except for medical examination, should be returned to him.

The granting of a clearance card should not be reported on the monthly report to the Supreme or Grand Recorder.

Final Cards.

A final card, as before stated, is granted to a member who desires to separate his connection with the Order honorably. The conditions precedent are these:

1. The member must apply in writing for the card, stating his desire to withdraw from the Order, and surrender all rights and benefits, of whatever nature or kind, he may have acquired in connection with the same.

2. He must pay up all arrearages of dues and beneficiary assessments levied at the date he applies, and also the fee for the card.

When these conditions are complied with, the Lodge has no right to deny the card, unless it desires to put the member on trial for some offense.

On receiving a final card, the recipient should not surrender his beneficiary certificate.

A person holding a final card can reunite with the Order anywhere, if accepted, surrendering his card and beneficiary certificate, or submitting sworn proof of its loss, if it cannot be produced.

The same preliminaries are required as in the case of a new member, but he does not have to be reinitiated, being already in possession of the degrees and work of the Order; nor does he have to pay degree fees, but does have to pay the fee for deposit of card, the fee for medical examination, and also one dollar for new beneficiary certificate, and one dollar beneficiary fee. The old beneficiary certificate must be forwarded to the Supreme Recorder, or Grand Recorder of the jurisdiction he joins, with his application for a new certificate.

If over 50 years of age, he is not eligible. As he comes as a new member, to all intents and purposes, the same rules apply as in the case of an initiate.

As to whether a member admitted on a final card comes back with all the honors he may have before acquired, there is a diversity of opinion, but we are not aware that any official decision has been rendered on the point. We incline to the opinion that he does. Supposing he had received the Grand Lodge degree, we see no way by which he could be rightfully denied admission to the Grand Lodge of his jurisdiction, or any privileges the degree confers.

The granting of a final card should be reported on the next monthly report to the Supreme or Grand Recorder; and all the money the member left in the beneficiary fund should be forwarded on the next call on the same thereafter. This is on the principle that all moneys paid into the beneficiary fund must be appropriated to the payment of death losses, and for no other purpose whatever.

In conclusion, we desire to say that for want of a full knowledge of the law in relation to cards, or knowing, yet failing to comply fully with its requirements, many vexatious complications arise. One of the most frequent is the failure of the Lodge electing a brother to promptly notify the Lodge from which he came. Said Lodge supposing the brother still its member forwards his beneficiary fee on a call from the Supreme or Grand Recorder of his jurisdiction, and so has nothing to remit to the Lodge the brother has joined when receiving official notice of the fact. The shortest road out of the difficulty in such case is for the Lodge to which he is transferred to remit on the next call one dollar short, explaining the reason therefor on the remittance report.

Several cases have occurred in this jurisdiction where members from other jurisdictions have been received without re-examination or application for a new certificate. After much trouble and annoyance in each case, the business has been gone over and rectified. All this should have been avoided by consulting the law.

The New Lodge.

It is impossible at the present writing to predict whether the projected new Lodge of Workmen of this city will prove a success or not. Some have reported in favor of the new Lodge and some against it. The question is, in fact, a complicated one, and very good arguments can be advanced both for and against having the new Lodge. There are already 23 Lodges in the city, and they average 196 members each. On the one side, it may be said that if they are not flourishing with 196 members, it is their own fault, in a measure, while on the other, it may be said that there are ample accommodations for all those who want to join the Order in the old Lodges. It certainly is not for a lack of members that the Lodges are not in a healthy condition. It is quite probable that it is on account of the social feature of the old Lodges being dull that the gentlemen on the new roll desire to have a Lodge of their own.

There can, indeed, be no other reason for the gentlemen on the new roll desiring to start a Lodge of their own than that they desire to make a social improvement in doing so. That there is vast room for this social improvement feature cannot be doubted. Financially the members of the new Lodge would not gain much, and would probably be more money out, take all things into consideration, than if they joined one of the old Lodges. The old Lodges, it seems, would not be injured, but might profit by the experience, and offer not only accommodations, but inducements to all who may wish to join the Order, for the social as well as the assessment feature.

A NEW LODGE IN LAKE COUNTY.—Deputy H. A. Oliver instituted No. 220 Lodge, A. O. U. W., at Middletown, July 28th, with 30 members. Ten applications were received for new members immediately, and the new Lodge has a fine prospect. The Lodge will meet in Odd Fellows' hall on Monday evenings. Following is the list of officers: D. Poston, P. M. W.; Q. V. P. Day, M. W.; J. L. Reid, F.; C. M. Young, O.; W. J. Nickerson, G.; John Severio, Rdr.; Leon Lobe, Fin.; C. W. Armstrong, Rvr.; D. L. Brooks, I. W.; F. Cameron, O. W.; J. Reinke, C. M. Young, L. Lobe, Trustees. Bro. Oliver formerly resided it that part of the country, and the members paid him the high compliment of naming their organization "Oliver Lodge." As an evidence of Bro. Oliver's worthiness, it is proper to say that although he is divested of the appearance and usual ways of politicians, he has been repeatedly elected to the office of County Clerk and Recorder in a county that has gone strong against his own political party. Middletown is located in a very pleasant valley, distant about four miles from the celebrated Harbin and Anderson springs, and a little farther distant from the Great Western and Oat Hill quicksilver mines, which are worked with great profit. Lodges of Odd Fellows and Good Templars are in a prosperous condition.

THE *Legion* suggests the "advisability of receiving dues and assessments only in the Lodge-room, and, if they insist on paying it to the Financial Secretary at his place of business, compel them to pay 10% for their absenteeism, or refuse to receive their money." It numbers this plan 1001. Like all others it has its objectionable features, but it is worth trying. Members of fraternal societies don't like to be driven, but if they don't, let them pay for having some one else carry their burdens. "The fund thus acquired," says the *Legion*, "could be devoted to defraying the expenses of a Lodge social, etc." We should go even further than this, and recommend that through some device each member be compelled to attend one session of his Lodge from beginning to close, at least once a month. In all of our city Lodges this would insure a full attendance every week.

It Works Badly.

The change required in our former law, by which all Medical Examiners' reports are now required to be approved by the Examining Board before the J. W. degree can be conferred on an applicant, works, as we foretold, badly. It has had the effect to arrest our onward progress, increase largely our expenses and also the labors of our Lodge officers, and to increase our death rate in the Order, instead of diminishing it. The reasons for this appear to us obvious, and have been before given, but they will bear repeating.

The present system involves to much delay and red tape and uncertainty. The men we most desire to get, become disgusted with so much circumlocution, while the undesirable, who seek their way into our ranks, are content to wait for the mill to grind, if at last it grinds their grist. So, in too many cases, the good are kept out, and the bad get in. Then there is a very considerable expense added for postage, and many papers are delayed, and many lost in the mails. But worst of all, the system operates to shift the responsibility in a great measure from the Lodge Examiners and Lodges, where it belongs, and should and must be kept, if we prosper, and transfer it to a medical board, where it does not belong, and where, in the nature of the case, it should not be placed. A supervising power has its uses, but they consist solely in seeing that the rules of the Order are complied with, as applied to applicants for admission. Beyond this, nothing should be demanded or expected. If a candidate be admitted and the J. W. degree conferred on him, when afterwards he is ruled out of the Order as ineligible, under the rules governing medical examinations, the physician who examined, and the Lodge who admitted the member will scarcely repeat such business very soon or often thereafter. Such lessons do not often require repetition.

At the recent session of the Supreme Lodge, an amendment was introduced by one of our Representatives to remedy this difficulty, which was reported favorably by the Committee on Laws and Supervision, but the Supreme Lodge did not concur, much to our regret. The failure to do so we believe will reduce the increase we would otherwise have had in our membership very nearly 1,000, and increase our assessments at least three in the current term.

On general principles, that system which gives us the best membership with the fewest assessments is the best system. Such, beyond question, is not the one we now have, so far as the matter under consideration is concerned.

HOW TO JOIN THE A. O. U. W.—Consult some friend who belongs to the Order. If he thinks well of your joining, he will procure for you a blank application for membership, which being filled out and signed by yourself, you take to the Lodge's Medical Examiner. Here you will be questioned, and your lungs and pulse examined. The Medical Examiner will then forward your application to the Lodge, with his report of your examination. Then if everything goes favorably, you can appear for initiation within two meetings at most from the time your application is made. And if you become a member, you will never be sorry for the job. It is something to be proud of to be able to present your wife, your sister, or your mother, a beautifully printed and embellished promise of the Grand Lodge, backed by 110,000 Workmen, to pay her $2,000 on your death. There is something grandly sweet and touching in making such a sacrifice in life that those with whom you have lived while on earth will receive the benefit of your unselfish kindness when you have passed away. In most Lodges it will only cost you about $15 to join, after which about $1 50 per month, at the highest.

SPECIAL FORM OF BLANK.—During the Supreme Lodge session, Wm. C. Richardson, M. D., Supreme Medical Examiner, presented the following report: As Supreme Medical Examiner, to whom was referred the blank form of application and Medical Examiner's report submitted by Rep. Osmond, of Maryland, I desire to say: 1st. That, in my opinion, it would be unwise and injudicious for the Supreme Lodge, at the present time, to adopt any special form of blank for the use of the several Grand Lodge jurisdictions, for the reason that they each have their peculiar forms, well adapted to their own particular ideas and necessities. However much it might be desired to have one uniform blank for the whole Order, it is apparent that the calling into use of the same by the Supreme Lodge would cause much unnecessary annoyance and expense. 2d. The matter of adopting a form for the use of Lodges under the Supreme jurisdiction has already been disposed of by the report of your Committee on Medical Examinations. [Pages 73, 74, daily journal.]

"FOR the first time since the institution of the A. O. U. W. in the States of Maryland, New Jersey and Delaware, there will be a month in which there is no assessment, and a handsome surplus still remains in the hands of the Grand Receiver," says the *Protector*. Two assessments for August out this way.

Grand Recorder's Department.

Headquarters of Grand Lodge, A. O. U. W., Rooms 40 and 41, St. Ann's Building, corner of Eddy and Powell, San Francisco. H. G. Pratt, G. R.

Wm. C. Flint, Esq., 216 Sansome street, S. F., is Chairman of Committee on Laws and Supervision. All By-Laws, or amendments to same, should be sent directly to him.

Recorders, or other Lodge officers, are requested to be free in asking questions for information. It is far easier to avoid an error than to correct it after it is made. While it is not my province to render decisions on points of law, still, as most points have already been covered by decisions, it is easy to state what such decisions are, and it will be cheerfully done when asked for.

Remember that hereafter no reinstatement will be legal without a vote of the Lodge. A majority vote only is required, except in the case of one suspended from the Order altogether, when the vote is by ball ballot, under the same rules as govern the case of an initiate.

All by-laws to be approved should be sent direct to the chairman of the Committee on Laws and Supervision. His name and address stands at the head of this column.

A J. W. who fails to present himself to receive the M. W. degree for three months after admission, must be re-examined before he can be advanced.

Financial Statement.

The following is a summary of the Grand Recorder's financial statement for July:

Total amt. received in Benef. Fund	$19,483.00	
Total amt. received in Gen. Fund	3,991.65	
Total amt. received on Relief Call, No. 2	12.60	
Balance on hand July 1, 1882, Benef. Fund	1,233 00	
Balance on hand July 1, 1882, Gen. Fund	7.73	
Balance on hand July 1, 1882, Relief Fund	924.50	
Total		$25,652.48
Paid out of Beneficiary Fund	$20,500.00	
Paid out of General Fund	2,426.91	
Paid out of Relief Fund	929.60	
Total disbursements		$23,856.51
Balance on hand Aug. 1, 1882		$1,795.97
Total amt. received in Benef. Fund	$19,483.00	
Balance on hand July 1, 1882, Benef. Fund	1,233.00	
Total Beneficiary Fund		$20,716.00
Paid out of Beneficiary Fund		20,500.00
Bal. on hand Aug. 1, '82, B. Fund		$216.00
Total amt. received in Gen. Fund	$3,991.65	
Bal. on hand July 1, 1882, Gen. Fund	7.73	
Total Gen. Fund		$3,999.38
Paid out of Gen. Fund		2,426.91
Bal. on hand Aug. 1, 1882, G. Fund		$1,572.47
Total amt. received on R. C. No. 2	$12.60	
Bal. on hand July 1, 1882, Relief Fund	924.50	
Total Relief Fund		$937.10
Paid out of Relief Fund		929.60
Bal. on hand Aug. 1, 1882, Relief Fund		$7.50

We, your Finance Committee, having examined the foregoing report, find the same correct.

Chas. C. Terrill,
Philip Peck,
E. H. Morgan. } Fin. Com.

Medical Examiner's Report.

We take the following from the report of Wm. C. Richardson, Grand Medical Examiner of the Grand Lodge of Missouri:

The result of my two years' work shows that there have been *one hundred and sixty* rejections, saving to the Grand Lodge, I feel confident, in the near future over a quarter of a million dollars, or, in round figures, the sum of $320,000.

According to the number of men belonging to the Order in the several vocations, the most dangerous occupations have been saloon-keeping, tobacco business and practicing medicine.

The percentage of deaths in the English membership in St. Louis is so much lower than in the country membership, that one of two conclusions must be arrived at. Either the medical examiners in St. Louis are more discriminating, or a city residence is more conducive to longevity than living in the country.

The Lodges outside of St. Louis have furnished the largest percentage of deaths from zymotic causes. The city has furnished the largest percentage of deaths from local causes.

The percentage of deaths from hereditary causes is about evenly divided between the city and country. The city has furnished all the suicides, the country has furnished the largest per cent. of deaths from violence, and finally, the homicides are evenly divided between the city and country.

The number of rejections in the city have been only 25; in the country, 135.

After all the statistics have been averaged up, it appears that the country and city membership, in point of qualifications as regards health and longevity, are about equal, and there is no occasion for the disposition that has been manifested by both the country and city to charge each other with furnishing the greatest number of deaths.

The average age of members who died was 39 years, indicating that it is those men under 40 years who are the worst risks in an insurance sense.

Graded Assessments.

The topic of graded assessments keeps cropping up occasionally, as it is a hobby with some persons. It may not be generally known that statistics are being collected for the use of the Supreme Lodge, with a view of fathoming this subject. During the session of the Supreme Lodge, a committee, appointed at the previous session to take into consideration and report on graded assessments in the Order, made a report as follows:

We have returns from only 10 jurisdictions, to wit: Michigan, Tennessee, Oregon and Washington, Maryland, Illinois, Massachusetts, California, Wisconsin, Canada, and Nevada; and said returns do not give sufficient data to furnish a basis for an intelligent and detailed report, as you will readily perceive that the reports above are from jurisdictions comparatively of recent organization, and would not furnish an adequate amount of statistical information as to the true state of the Order.

In view of these facts, we would submit the following propositions and recommendations:

1. That from the limited data of the experience of this Order in our possession, we can not, at this present session, report conclusions which would be satisfactory to the Supreme Lodge.

2. It has been impossible, to this date, to obtain from the older jurisdictions any vital statistical information on which to reach conclusions for which this committee was originally appointed.

3. We find that there are certain organizations of a fraternal character whose statistical experience would be of great value to this organization in arriving at a definite conclusion to recommend to this Supreme Lodge.

4. In the limited examination we have made on this subject, we have found much that challenges the attention of this Order, and which merits a thorough and careful investigation, which would entail long and laborious research, which could not be accomplished at this session of the Supreme Lodge; nevertheless, we deem it of sufficient, and even vital importance, that such full and complete investigation be made into the mortality statistics of this and kindred organizations.

In view of these facts, and in order to accomplish the result so much needed, we recommend that a standing committee of three, to be known as the Statistical Committee, be appointed at this session, of which the Supreme Recorder shall be, *ex officio*, chairman, whose duty it shall be to collect and compile such statistics as may be available, bearing on the mortality of co-operative and fraternal benefit associations, as well as the experience of this Order, and to that end we would recommend that a copy of this report be sent to each Grand Recorder of the Order, with a request that all information at their command be furnished at an early day to said Committee on Vital Statistics.

The report was adopted, and the committee appointed—the committee consisting of Wilson, of Michigan, and Supreme Trustee McLean.

Iowa.

A Des Moines, Iowa, special dispatch to the Chicago *Times* says: When the controversy between the Iowa Grand Lodge and the Supreme Lodge of the Ancient Order of United Workmen first sprang up, the Attorney-General was solicited for an opinion as to whether the Supreme Lodge could levy assessments upon the members of the Order in Iowa without being compelled to deposit $100,000 in cash or bonds with the State Auditor, in compliance with the insurance laws of the State. The response sustained the position of the Iowa Grand Lodge, and declared that such assessment would require the necessary deposit. To-day, however, the Attorney-General files a second opinion, in which he states that his former opinion in regard to the Supreme Lodge, in which he held it to be a foreign insurance company doing business in this State, was made under misapprehension of the powers of the Supreme Lodge. After an examination of the documents of the Supreme Lodge, including the Constitution, etc., he now reverses his decision, and declares it as his opinion that the Supreme Lodge is not responsible in any way for the insurance certificates, but that they emanate from the Grand Lodge, and the Supreme Lodge has no jurisdiction in this matter. Hence, he holds that it cannot be regarded as a foreign insurance company. In regard to the relief fund of the Supreme Lodge, he holds that if, as the members claim, it is only a loan, then the Supreme Lodge cannot be regarded as an insurance company. The opinion concludes with the general statement that the Supreme Lodge, A. O. U. W., is not an insurance company, and hence will not be required to deposit the $100,000 which the law requires of an insurance company as a guarantee that its losses will be paid. The opinion is the reverse of the one filed January 25th, which was delivered under a different understanding of the relations between the Supreme and Grand Lodges. The last opinion corresponds to the view taken by the loyal members of the Order, but will probably have no weight in between the two Lodges. The Grand Lodge stands firm in its determination not to recognize the right of the Supreme Lodge to levy any assessments whatever upon them for the payment of death losses in other States.

State of the Order.

Through lack of space at the time, we omitted to publish, when we reported the Supreme Lodge session, some of the longer reports of committees. One in particular, that on "State of the Order," will be of interest now. It is as follows:

Your Committee on the State of the Order, to whom was referred the resolution of Bro. E. M. Sanford, in reference to annexing the Territory of Dakota to the Grand Jurisdiction of Minnesota, and the recommendation of the Supreme Recorder, in reference to the consolidation of Territory; also the resolution offered by Rep. W. H. Jordan, relating to the same subject, have had the subject-matter under advisement, and would report as follows: There has been, in the Territories named, 2,166 beneficiary certificates issued by the Supreme Lodge, and 45 Lodges instituted; that on May 1, 1882, there were in good standing in this Territory 1,104 members and 27 Lodges; that the Order in the Territory named is in anything but a flourishing condition, as of right it ought to be. In the Territory of Dakota, especially, we find there had been organized four Lodges, and 105 beneficiary certificates issued, none of which are in force to-day. We have carefully investigated for a cause for this, and we are convinced that this result may be attributed to the fact that this Territory being under the immediate control of the Supreme Lodge, and situated so far from what might be termed the seat of government—the scattered condition of the population making it wholly impracticable for the Supreme Lodge to exercise that supervision that is sometimes required—wholly impracticable to visit them by deputies, to give such explanation and encouragement as is often needed, we believe it would be much to the interest of the Order to divide the Territories into a few jurisdictions, and encourage the establishment of a Grand Lodge in such as have not that advantage already, and in support of this theory we have only to cite you to the success of the experiment in the Grand Jurisdiction of Massachusetts and Maryland.

We believe also that the best interests of this Order will be subserved in making large jurisdictions that in time will become strong and healthy, instead of small State jurisdictions. And further, we believe the size of this body is now as large as will best serve and advance its interests. All these things being considered, we recommend that the following resolutions be adopted:

Resolved, 1. That the Territory of Dakota be attached, and become a part of the Grand jurisdiction of Minnesota.

Resolved, 2. That Colorado, Nebraska, New Mexico and Arizona be set apart, and constitute one jurisdiction, and that the Supreme Master Workman be requested to take such steps to organize a Grand Lodge in this jurisdiction as to him may seem best.

Resolved, 3. That the following Territory be added to the Grand jurisdiction of Texas, and form a part thereof, viz.: Arkansas, Indian Territory and Louisiana, with the following restrictions, viz.:

That no Lodges shall be organized in the city of New Orleans or on the Gulf coast, or in any locality where yellow fever has ever existed as an epidemic.

Resolved, 4. That Mississippi, North Carolina and South Carolina be added to and become a part of the Grand Jurisdiction of Georgia, with the following restrictions: That no Lodges shall be organized in locations in which the yellow fever has ever existed in an epidemic form.

Resolved, 5. That the States of Virginia and West Virginia be formed into one jurisdiction, and the Supreme Master Workman be requested to take the necessary steps to organize a Grand Lodge therein.

This is the whole report of the committee. On motion of Representative Jordan, of California, this report was amended by striking out Nebraska from the second item. It was also ordered, on motion of Representative Garrett, of Tennessee, that Arkansas be struck out, and added to the Tennessee jurisdiction, provided the Tennessee Grand Lodge consented.

The semi-annual report of the General Relief Committee shows a fair share of good work accomplished by them. A number of Workmen who held membership outside of this city were given pecuniary aid, while others were secured positions at various kinds of employment. Considering the limited means at the disposal of the committee, the work accomplished is creditable to them and the Orders which inculcate this kind of charity—that of "helping a brother to help himself."

California Lodge, No. 1, of Oakland, purposes giving a grand invitation banquet and ball on the evening of August 21st—that being the anniversary of the establishment of the Order on this coast. It is expected to be a splendid affair, and several of the Grand officers will be present, as well as a large delegation of brothers from this city. The committee having charge of the arrangements will exert themselves to make this entertainment worthy of the occasion and the Order.

The Workmen's Guarantee Fund Association has drawn a warrant for $1,000 in favor of Sarah Ann Powell, widow of the late Brother Payton Powell, of Main Top Lodge, No. 156, Michigan Bluffs.

Opinion of the Attorney-General.

The following we extract from the recent opinion of the Attorney-General of Iowa:

In view of the misapplication and misinterpretation of the opinion of the Attorney-General of Iowa, presented by J. D. Nichols, who addressed the Grand Lodge in February, 1882, the following is herewith submitted to the whole Order, A. O. U. W.:

Judging from newspaper reports and the contention that is claimed to have arisen by reason of my opinion, it has not been correctly understood. My first opinion was given merely upon *assumed* premises. I say assumed, because, not being a member of the Order myself, and knowing but little about the history or workings of the Order, I acted upon some general statements of others given to me. Having examined the facts in the case, I find that the Supreme Lodge is in no manner connected with the insurance of the individuals, receiving no benefit therefrom, nor in any manner liable on any policy or certificate of insurance.

It is clear that the funds belong to the Grand Lodge in trust. It only is liable, and the Supreme Lodge is simply a supervising and appellate tribunal, with the power to make general laws and regulations, and it necessarily follows that it is not the Supreme Lodge that is doing an insurance business, within the meaning of the laws of Iowa. My first opinion was grounded upon the assumption that the Supreme Lodge is a foreign corporation engaged in the life insurance business in Iowa. The Supreme Lodge is the highest tribunal known to the Order, and it has jurisdiction over all matters on appeal from Grand Lodges. At all events, it is not for you or me, nor the courts, if the question should there be presented, to consider the binding force of the relief law.

Upon the soundest principles it has been held by our Supreme Court, as well as by many others, that courts and officers must accept as concluaive that which has been determined by the highest tribunal of the organization in question. This Supreme Lodge, having first enacted it, and subsequently having declared it valid and decreed its enforcement, it cannot be questioned. And the Grand Lodge of Iowa, in its Articles of Incorporation, having promised obedience to such laws as might be adopted by the Supreme Lodge, is bound thereby, and in obeying any edict issued under such law, in no sense makes the Supreme Lodge an insurance company, nor is it—the Supreme Lodge—in any sense doing an insurance business in this State.

Respectfully submitted,

Smith McPherson,
Attorney-General.

Hon. W. V. Lucas, Auditor of State.
Dated Red Oak, Iowa, July 17, 1882.

Bro. John B. Pitchford, mining engineer, formerly of Gold Hill, Nevada, but recently from Grass Valley, and now a member of Grass Valley Lodge, No. 51, has engaged with the Risdon Iron Works in his professional calling, and will probably visit different portions of the Pacific coast. He is an earnest Workman, and makes a practice of visiting Lodges in his travels.

Business Announcements.

New Method Piano Teaching, John Thomas, S. F.
Stock and Sale Yard, J. D. Horan, S. F.
Telephone Transfer Company, Geo. Phillips & Co., S. F.
Dress Suits for Special Occasions, J. Cooper, S. F.
Commission Merchant, R. D. Mowry, S. F.
Booksellers and Bookbinders, Cummings & Harrington

Canvassing Agents.

We want several canvassing agents who will make it their business to solicit subscriptions and advertising for our first-class progressive newspapers. Men of ability and experience can secure good pay and permanent employment. Send references and state your past occupation etc., to the publishers of this paper.

New Workman Diploma.—The New Workmen Diploma has received flattering testimonials from the Supreme Lodge and Grand Officers of this State. It is a work of art, and Workmen are being supplied throughout the United States. Copies can be seen and procured at Sol. F. Purdy's jewelry store, No. 16 Fourth street., or copies will be forwarded on receipt of price, $2, or sent C. O. D. Address C. H. M. Curry, publisher, No. 16 Fourth st., S. F.

PALMER'S,

726, 728 and 730 Market Street, S. F.

New Department added, with a full line of Gents' Furnishing Goods. Our usual variety of Novelties in Millinery and Fancy Goods and Ladies' Furnishing Goods.

Kid Gloves a Specialty.

FURNITURE.

H. Schollhaas' auction and commission house, Eleventh street, Odd Fellows' building, Oakland, Cal.

About Obtaining Patents.

Patents Are Virtually Contracts

Between inventors and the public. The consideration flowing from both parties to the contract is expressly fixed by statute. The Government requires the following consideration in every case: First, that an applicant for a patent shall disclose a new and useful improvement, of which he is the first and original inventor. Second, that the invention has not been patented, or published in a printed publication, prior to the date of his *invention*. Third, that the invention has not been in public use, or on sale, more than two years prior to his application for a patent. Fourth, that the invention shall be properly described and claimed in the specification forming a part of the patent. Provided an inventor complies strictly with these conditions, the Government guarantees that the inventor shall have the exclusive right to make, use and sell the thing invented for the term of 17 years.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence, it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, that it may afford him complete protection for his invention during the life of his patent.

Secure a Good Patent.

An inventor should first ascertain whether or not his improvement has been patented to another. This requires an exhaustive search among all the patents in the class to which the invention relates. This question can often be answered gratuitously by us immediately on receiving full information of the invention, by reason of our long and extensive practice as patent solicitors and editors and publishers of first-class scientific and industrial journals during the past 20 years and over. When the question of priority of invention is not so readily to be determined, it is generally best to make what is termed a "preliminary examination," by searching through the patent office reports among the patents in the class to which the invention relates, and referring to our extensive patent library, containing compilations of special classes of American and foreign inventions, mechanical dictionaries, scientific encyclopedias, files of scientific and mechanical newspapers, and an immense number of patent applications by inventors of the Pacific coast, carefully filed by this office since 1860.

If, by this "preliminary examination," the improvement is found to have been previously invented, our client will receive for the small fee of $5 for the examination a verbal or written report showing definitely whereby his invention has been anticipated, thereby saving him further expense, and perhaps much time, useless delay, anxiety, etc.

To avoid all unnecessary delay, however, in securing patents at the earliest moment practicable, inventors will do well to forward a model, drawing, or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with $15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately, and forwarded to the inventor for his signature. When the inventor receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. [This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps to be taken.] When the patent is allowed, the inventor will be duly notified, and on sending the final Government fee of $20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretence of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give a case up as long as there is a chance to obtain a patent. The Agency charge is from $25 to $30, or sometimes more, if the invention is intricate or complicated, or requires much labor. Drawings cost from $5 upward, according to their number and the time employed; and, if a model is sent, the express charges upon this and the papers must be added. The total cost, in addition to Government fees, rarely exceeds $40, and for this we do all we can without appealing the case.

When the invention consists of a new article of manufacture, or a new composition, samples of the separate ingredients sufficient to make the experiment, and also of the manufactured article itself must be furnished.

Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are considered more satisfactory to the Patent Office than the old and more cumbersome system of storing up an immense bulk of almost numberless models.

Drawings or sketches sufficient to illustrate clearly the invention, with a sufficient description to enable us to make a full set of perfect drawings for the Patent Office is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it for our use.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or very poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sales had the invention been fully portrayed by artistic and skillfully executed drawings. Again, when patents of this character are brought into court, the uncertainty and ambiguity of the drawings enable the opposing experts to mystify the judges as to the construction or combination of parts intended to be covered by the patentee. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken that the invention is fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

In the Patent Office

The application is assigned to the Examiner having charge of the class to which the invention relates. The case must then take its turn with others in the order of filing, and in due time is carefully examined to test the novelty of the invention. If the Examiner fails to find anything that anticipates the invention, a patent is immediately allowed, provided the specification and claims are drafted in proper form. Should the Examiner find a prior patent which, in his opinion, anticipates one or more of the claims in the application, a letter of rejection is sent to the attorney in charge of the case; and if the attorney coincides with the views of the Examiner, the claims rejected are erased. In preparing applications for patents, an attorney should be careful to familiarize himself with the class of inventions to which the application pertains, so that the specification and claims may be drafted as nearly perfect in the first instance as is possible. This course saves much time in prosecuting the application to a patent.

When claims are improperly rejected on patents which do not anticipate the spirit or wording of the claims, proper steps are immediately taken to convince the Examiner of his error. This is done, in most part, by personal arguments, as the differences in construction, operation, utility and results are more readily discovered and appreciated by an oral presentation of the facts than can possibly be done by relying solely on written arguments. In order that the Patent Office record of the patent shall be complete, an oral argument is generally supplemented by a manuscript brief, that others in examining the files at any future time, may clearly comprehend the position taken by the Examiner and attorney in prosecuting the case to patent.

In addition to our own personal attention to the interests of our clients here, we have, for over 12 years past, had constantly in association with us in Washington, one of the soundest legal counselors and ablest of practitioners in patent business in this country, who carefully attends in person to our business at the Patent Office and has attained success in a most marked degree.

Perfect Claims.

The value and force of a patent are dependent on its claims. A patent may disclose to the public the most important and valuable invention, and yet the claim be of such meager scope that the patent is actually worthless. When the claims of a patent are so loosely drafted that infringers can flood the market with improvements, differing from the improvement disclosed by the patent only in slight changes in construction and arrangements of parts, such a patent is valueless to the owner, as it fails to afford him that exclusive and complete protection intended by the Patent Law. Hence it is that the greatest care, skill and perseverance are required, first in properly drafting the claims in the first instance, and, second, in prosecuting the application before the Patent Office, and maintaining the rights of the inventor to claims as broad and sweeping as the invention will warrant. This latter is no easy task. The Examiners of the Patent Office serve in the capacity of attorneys guarding the interests of the public. It is their sworn duty to exercise the greatest care and watchfulness, that patentees do not secure claims of greater scope than they are justly entitled to. It is but natural that Examiners are sometimes in error as to just what scope should be accredited an invention. Although the Examiners act under honest convictions in cases where they refuse an inventor his just rights, yet it is the duty of the attorney to maintain the claims of his client, if he is convinced that they are just and proper. To succeed in this requires the display of tact, firmness and ability; and when the Examiner is made to see that the inventor is honestly and fairly entitled to the claims which have been rejected, he will almost invariably recede from his former action, and allow the case.

Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. (continuously editors and publishers of the MINING AND SCIETIFIC PRESS, nearly from its early commencement in 1860) offer comparatively far better facilities to the local inventors of the Pacific States and Territories than are possessed by any other agents in America. Members of the firm give personal attention to the applications entrusted to their care. They have been longer in practice in patent soliciting than most agents who are still personally engaged in the business. They have secured more U. S. and foreign patents in the past 20 years (with very few exceptions) than any other firm still existing. Their practice has been successful and long continued that the great majority of inventions on this side of the American continent have been patented through their agency, thus affording them great and valuable experience, by thorough information of the true principles and points of novelty in the inventions, whether general in character or peculiarly local to this coast.

The extensive business combination and experience of this firm is undoubtedly one of the most fortunate in existence for affording inventors prompt and reliable advice and the best possible facilities for securing their full patent rights with safety and dispatch at unifirmly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly-stated and correct description of his invention in one or more of our influential and reliable newspapers, affording just the circulation that is best calculated to duly inform the class of readers most specially interested in the subject of his invention.

Saving of Time, Etc.

Inventors on this coast will find that owing to our familiarity with inventions and local affairs of this coast, we can more readily and fully comprehend their wants, and thus save much of the time ordinarily consumed in preliminary writing back and forth when distant agencies are employed.

Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is, that it entitles the caveator to receive notice, for a period of one year, of any application for a patent subsequently filed, and which is adjudged to be novel, and is likely to interfere with the invention described in the caveat, and the caveator is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from $10 to $20. The Government fee is $10 additional.

To enable us to prepare caveat papers, we only require a sketch and description of the invention.

Rejected Applications.

Inventors who have rejected cases (prepared either by themselves, or for them by other agents), who desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors who do business with us will be notified of the state of their application in the Patent Office, when it is possible for us to do so.

DEWEY & CO.,
Patent Solicitors, Office of MINING AND SCIENTIFIC PRESS,
220 Market St. Elevator entrance, No. 12 Front St., S. F.
GEO. H. STRONG W. B. EWER. A. P. DEWEY.

Employment.

A medium-aged man of family is desirous of immediate employment (at very reasonable wages), as carpenter, assistant book-keeper, or for office work. Will go to the country, but prefers S. F. Can give satisfactory reference in S. F. or Oakland. Is a member in good standing of one of our leading fraternal societies. Address C. E. L., at No. 412 Jones St., S. F.

Attend to This.

Our subscribers will find the date they have paid to printed on the label of their paper. If it is not correct, or if the paper should ever come beyond the time desired, be sure to notify the publishers by letter or postal card. If we are not notified within a reasonable time we cannot be responsible for the errors or omission of agents.

Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

B. W. CROWELL—San Luis Obispo and Santa Barbara counties..

OFFICERS and members of the A. O. U. W. receiving a complimentary number of the WATCHMAN with this notice marked are invited to examine its merits and give our enterprise the benefit of their friendship and substantial support as far as possible. Our terms of subscription are usually to be found on the eighth page of each issue. Persons receiving duplicate copies are requested to circulate them to the advantage of our cause and the publishers.

DO NOT DELAY.—Send us your subscriptions promptly. Don't let any break occur in your subscriptions to the WATCHMAN. Every live Workman needs every number of the paper, and we need his assistance to print as valuable a journal as we strive to for the special benefit of its patrons and the general good of the Fraternity. Send the cash direct, or, if more convenient, hand it in with your dues to the Financier and we will allow him for trouble and expense of remitting.

FRANK P. LATSON & Co., importers and wholesale and retail dealers in hardware and building materials, at 28 New Montgomery Street, under the Palace Hotel, have a full stock in their line. They have a large assortment of bronze burglar-proof locks, carpenters' tools, fine cutlery, fire-arms, etc., and are agents for feather dusters and brushes. Builders and contractors are invited to examine their new stock.

MANSION HOUSE.—First-class in every respect, and reasonable prices.—When you visit Stockton stop at the Mansion House. Free Coach to the house.

J. H. CROSS, Proprietor.

HOW MIRRORS MAY BE RUINED.—It is a fact worth knowing, but which does not seem generally understood, that the amalgam of tinfoil with mercury, which is spread on glass plates to make looking-glasses, is very readily crystallized by actinic solar rays. A mirror hung where the sun can shine on it is usually spoiled; it takes a granulated appearance familiar to housekeepers, though they may not be acquainted with its cause. In such a state the article is nearly worthless; the continuity of its surface is destroyed, and it will not reflect outlines with any approach to precision. Care should therefore be exercised in hanging. If any of our readers have mirrors which appear to be spoiling, it would be well to ascertain whether the direct sunlight strikes them. If thus exposed, they can probably be saved from further injury by simply changing their position. The back, as well as the front, must be protected. A small glass hung in a window where the rays strike it behind is peculiarly exposed. The back should always be covered where the beams are likely to touch it. It is also well to avoid hanging a mirror near a stove or fire-place, where the heat radiated can reach it. If this precaution is neglected, granulation is likely to occur, even in a comparatively dark room, by the influence of warmth instead of light. A lamp or gas jet, if placed too close while burning, though it may not crack the glass, will often bring about the same injurious crystallization, and will even sometimes cause the amalgam to melt and run off.

AT the Durham (England) miners' annual gala near that city last month, 45,000 people were present. The speakers generally addressed themselves to the condition of the coal trade in Durham and the present position of the miners, etc. Mr. Burt and other speakers stated the fact that at present there is sufficient work for all the miners in the Tyne and Wear—full and constant work; so that, looking at this fact, trade cannot be considered bad on the whole. Mr. Burt also stated that in 1870 the coal miners in the United Kingdom numbered 350,000, and in 1874 the number had increased to 548,000. In 1878, 63,000 had left the mines, and in 1880 the number of miners were more than 50,000 below what they were in 1874. He congratulated the miners on the recent adjustment of the sliding scale, and advised them to support it by every means in their power.

IT is reported that the De Lesseps Panama canal is being pushed forward with energy, and prospects of early success.

"Sound It Along the Line."

Ever onward and upward is the motto of the A. O. U. W., and with the success of the Order is the WATCHMAN'S progress. There are, however, some Workmen who are not subscribers, and we wish to draw *their* attention to the merits of our journal. Those of our readers who have been with us from the start, and also those who have come later, can do much to not only aid our enterprise, but also that of our organization. They have been with us, seen our work, and can best tell whether the WATCHMAN has not been an earnest advocate of the Order's interests.

Members of the A. O. U. W. have a pecuniary interest, which renders an able exponent of their rights and privileges of paramount importance. Therefore, every member of the Order should take the paper, read it, and if he has some friend who is morally and physically qualified, lend him the paper for the purpose of hastening action.

Members of the WATCHMAN family who have felt strength and received encouragement from a perusal of the Order's doings in its columns would do well, also, to pass it occasionally around to the lukewarm, that they may be partakers in the faith which moves them.

The privileges we now enjoy by reason of our membership will last while life is in us, and when we are gone others will be ready to fill our places. If the Order should ever perish, lukewarmness will be the rock upon which we will split, and one of the greatest preventives of this will be the enthusiasm that is kept alive by a careful reading of the WATCHMAN.

We will send copies free for samples to those who are willing to assist in the circulation of our paper.

Agents Now Wanted.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to our business. Apply soon, or address this office, giving address, age, experience and reference.

DEWEY & CO., Publishers,
No. 252 Market St., S. F.

THE finest and most extensive line of Men's Furnishing Goods in this city can be seen at No. 25 Kearny. Having one of the best cutters he will make a specialty in making shirts to order. Bro. Carmany has the reputation of being a connoisseur in his business, and supplies he best trade in this city.

HOW TO STOP THIS PAPER.—It is not a herculean task to stop this paper. Notify the publishers by *letter*. If it comes beyond the time desired, you can depend upon it we do not know that the subscriber wants it stopped. So be sure and send us notice by *letter*.

THE PACIFIC RURAL PRESS,

AN ILLUSTRATED

AGRICULTURAL HOME JOURNAL.

Among other Reasons for Subscribing are the Following:

Because it is a permanent, first-class, conscientious, able, and well conducted journal.

Because it is the largest and best agricultural weekly west of the Rocky mountains

That Patrons may be reliably informed on the progress of the Order in this and other fields.

That more farmers's wives and children in their rural homes may be cheered by its weekly visits, laden with its pleasing, yet moral reading, and sound instruction.

That a more extended interchange of views and opinions may be had among farmers, upon all the great questions touching their mutual interests and progress.

That the agricultural resources of the Pacific States may be more wisely, speedily and thoroughly developed by an open and free discussion in our columns.

That all the worthy industries of our State may be advanced in connection with that of agriculture, our columns being ever open to the discussion of the merits of all progressive improvements.

That the RURAL, after having been read and pondered over by the home circle, can be filed away for future useful reference, or forwarded to the old Eastern fireside of the Atlantic border, in aid of an increasing immigration to our sunny clime.

Subscription rates, $3 per annum when paid in advance. Please invite your friends to subscribe. We will send free sample copies for circulation and further information concerning subscription, etc., on application.

Secretaries, Lecturers and other Patrons are cordially invited to correspond for our columns, for the good of the Order and their local interests.

Facts in Mechanical Construction.

You rise in the morning and, while dressing, take up a phial containing a tonic, of which a little has been prescribed for you; but, after the first few drops have been counted, succeeding drops run down the side of the phial—all because the lip is shaped without regard to the requirement. Yet millions of such phials are annually made by glass-makers, and sent out by thousands of druggists; so small being the amount of sense brought to bear on business. Now, turning to the looking-glass, you find that, if not of the best make, it fails to preserve the attitude in which you put it; or, if what is called a "box" looking-glass, you see that the maintenance of its position is insured by an expensive appliance that would have been superfluous had a little reason been used. Were the adjustment such that the center of gravity of the glass came in the line joining the points of support (which would be quite as easy an adjustment), the glass would remain steady in whatever attitude you gave it. Yet, year after year, tens of thousands of looking-glasses are made without regard to so simple a need. Presently you go down to breakfast, and taking some Harvey or other sauce with your fish, find the bottle has a defect like that which you found in the phial; it is sticky from the drops which trickle down and occasionally stain the table-cloth. Here are other groups of traders, similarly so economical of thought that they do nothing to rectify this obvious inconvenience. Having breakfasted, you take up the paper and, before sitting down, wish to put some coal on the fire. But the lump you seize with the tongs slips out of them, and if large, you make several attempts before you succeed in lifting it—all because the ends of the tongs are smooth. Makers and venders of fire-irons go on, generation after generation, without meeting this evil by the simple remedy of giving to these smooth ends some projecting points, or even roughening them by a few burrs with a chisel. Having at length grasped the lump and put it on the fire, you begin to read; but before you have got through the first column, you are reminded, by the changes of position which your sensations prompt, that men still fail to make easy chairs. —*Popular Science Monthly.*

SCIENTIFIC PARADOXES.—The water which drowns us can be walked upon as ice. The bullet which, fired from a musket, carries death will be harmless if ground to dust before being fired. A crystallized part of the oil of roses, so graceful in its fragrance, a solid at ordinary temperatures, though readily volatile, is a compound substance, containing exactly the same elements, and exactly the same proportions, as the gas with which we light our streets. The tea which we daily drink, with benefit and pleasure, produces palpitations, nervous tremblings, and even paralysis, if taken in excess; yet the peculiar organic agent called "theine," to which tea owes its qualities, may be taken by itself (as theine, not tea) without any appreciable effect. The water which will allay our burning thirst augments it when congealed into snow, so that Captain Ross declares the natives of the Arctic regions "prefer enduring the utmost extremity of thirst rather than attempt to remove it by eating snow." Yet if the snow be melted, it becomes drinkable water. Nevertheless, although if melted before entering the mouth it assuages thirst like other water; when melted in the mouth it has the opposite effect. To render this paradox more striking, we have only to remember that ice, which melts more slowly in the mouth, is very efficient in allaying thirst.

NEW STYLES FOR FINISHING.—The fact is observed by hard-wood manufacturers that new styles are being adopted in the direction of fine finishing, the most of which are somewhat antique. In fact, while they mark a new departure as compared with the recent types of finishing, they still partake of the characteristics of the styles of years ago; that is, while they are new, they are at the same time more or less old-fashioned. Perhaps it is with architecture as it is with fashions, for with the advent of knee-breeches and the prospective recurrence of the balloon style of ladies' dresses, we may soon find ourselves back to the good old times when our forefathers first ascertained that America was a great timber country, and wore powdered wigs.

GALVANIZED IRON will corrode after six or seven years' exposure to moisture.

Mining and Scientific Press.

THE MINING AND SCIENTIFIC PRESS is the leading mining journal in America, and enjoys a larger circulation among the more intelligent operators and workers in the gold fields of the world.

Established in 1860, it has firmly maintained its position as a reliable, progressive journal. The information given in its columns has saved millions of dollars to the practical miners, metallurgists, mill men, mine and shareholders on the Western side of our continent.

Among its contributors are the ablest and most experienced mining engineers, superintendents and practical miners in this country.

The PRESS gives a condensed summary of Mining News from the most important mining districts of the country.

New processes and methods of mining are described in its weekly issues. New mining machinery and improvements are frequently illustrated and explained in a manner to be of great value to all interested in mining.

As a scientific and mechanical representative of the Pacific coast it is decidedly popular, and a standard journal with the most thrifty industrial people of the Pacific States and Territories. Its authority is of the highest order, and its usefulness in its special sphere unrivalled.

Every public library, mining engineer, metallurgist, mining operator and intelligent mechanic and manufacturer, will find profit by its reading.

Subscription, $4 a year in advance. Sample copies postpaid, 10 cents.

DEWEY & CO., Publishers.

MRS. J. F. PARKS.	Amador Co.	MISS HARTWICK.
10—GOLDEN DAWN.	San Francisco.	2d & 4th Saturday
MR

The Tables Turned.

It was just such an American village as you see in pictures. A background of superb old mountains clothed in blue green cedars, with a torrent thundering down a deep gorge and falling in foamy billows; a river reflecting the azure of the sky, and a knot of houses with a church-spire at one end and a thicket of factory chimneys at the other, whose black smoke wrote ever-changing hieroglyphics against the brilliancy of the sky.

This was Dappleville, and in the rosy sunshine of a June day the girls were all issuing forth, while General May, the foreman, sat at his desk, a pen behind his ear, and his small, beady eyes drawn back as it were in the shelter of a precipice of shaggy eyebrows.

One by one the girls stopped and received their pay for the week's work, for this was Saturday. One by one they filed out with discontented faces until the last one paused at the desk.

She was slight and tall, with large velvety blue eyes and a complexion as delicately grained and transparent as rose-colored wax, and an abundance of glossy hair of so dark a brown that the casual observer would have pronounced it black, and there was something in the way the blue ribbon at her neck was tied and the manner in which the simple details of her dress were arranged that bespoke her foreign birth.

"Well, Mademoiselle Marie, how do you like factory life?" asked the foreman.

"It is not disagreeable," she answered, a slight accent clinging to her tones like fragrance to a flower, as she extended her hand for the money counted out to her.

"You have given me but four dollars, and it was eight by the contract," she said.

The foreman shrugged his shoulders with an insolent air.

"Humph! you ain't much accustomed to our way of doing things, are you, Mademoiselle? Eight, of course, but we deduct two for a fee."

"A fee! For what?" demanded Marie, with flashing eyes.

"For getting you the situation, of course. Such places don't grow on every bush, and you naturally expect to pay for the privilege."

"I did not."

"Oh, well, all right. You ain't obliged to stay unless you choose."

"Do you mean that if I do not pay this money——" hesitated Marie.

"You can't expect to stay in the works," said May, hitching up his collar.

"But the other two dollars?"

"Oh, that is a percentage the girls all pay," said the foreman.

"But what is it for?"

Mr. May laughed.

"It helps out my salary. Of course you know the girls expect to pay something each week for keeping their situations in a place where there are so many anxious to get in."

"And Mr. Elder?"

"Oh, he hasn't much to do with it. I am master, if you please."

"Mr. Elder owns the works?"

"Well, yes, he owns it, but I manage everything. Mr. Elder reposes the utmost confidence in my ability, and he is a good business man. He understands his business. And if you have any more questions to ask—"

"I have none; but I need this money myself. I work hard for it; I earn it righteously. I cannot afford any more than the others among these poor laboring girls to pay it to your greed."

"Eh?" ejaculated Mr. May, jumping from his seat as it stung.

"And I will not pay it," calmly continued Mademoiselle Marie.

"Very well; just as you like, Mademoiselle, only if you don't conform to the rules of the Dappleville Works ——."

"Are these the rules?" scornfully demanded the girl.

"Pray consider your name crossed off the books; you are no longer in my employ. Good evening, Mademoiselle."

Mr. May slammed down the cover of his desk as if it were a patent guillotine and poor Marie's neck were under it.

Two or three of the girls who had hovered around the place to hear the discussion, looked with awe-stricken faces at Marie as she came out with $4 in her hand.

"You have lost your place, Ma'amselle," whispered Jennie Bass, a pale, dark-eyed girl who supported a crippled mother and two little sisters out of her factory earnings.

"And he'll never take you on again; he is as vindicative as possible," said Mary Rice.

"It matters not. He is a rogue, and rogues sometimes out-general themselves.

"But you can't starve," said Jennie. "Come with me, Ma'amselle. My home is a poor place, but you are welcome to stay there till you can write to your friends.

Marie turned and impulsively kissed Jennie on her lips.

"I thank you, but I do not need your kindness. I have friends nearer than you think."

Marie Duvelle went back to the red brick house, all thatched with the growth of the woodbine, where she lodged with the wife of the man who tended the engines of the Dappleville Works.

"Does he cheat you out of your money, too?" she inquired, when Simon Pettengill came home, smoke-stained and grimmy, to his supper.

"One-sixth I have to pay him," said Simon with a groan, as he glanced at the five little ones around his board. "Yes, Miss; he's a villian; but this world is full of such, and I find it a pretty hard world to get on in. Mr. Elder never comes here, or may be things would be different. Mr. Elder lives abroad, in Paris, they say."

"He is in this country now, and I intend to write to him."

"It won't do no good, Miss."

"Yes it will," said Marie quietly.

* * * * * * *

The petals of the June roses had fallen like a pink carpet along the edge of the woods, and the Dappleville Works wore their holiday guise, even down to Simon Pettengill's newly brightened steam engine, for Mr. Elder and his bride were to visit the factory on their wedding tour.

"It is a pity Ma'amselle Marie went away so soon, for they say the master is kind hearted in the main and she might have spoken up for herself," said Simon to his assistant.

Mr. May, in his best broadcloth suit and mustasche newly dyed, stood in the entrance smiling as the carriage drove up and Mr. Elder, a handsome blond man, sprang out and assisted a young lady in a dove-colored traveling suit to alight.

"May, how are you?" he said with the carelessness of conscious superiority. "Marie, my love, this is my foreman."

"Mademoiselle Marie!"

Mr. May found himself cringing before the slight French girl whom he had turned from the factory a month before.

"May," said Mr. Elder, authoritively, "my wife tells me some very strange stories about the way things are managed here. It became so notorious that the rumors reached her at Blythesdale Springs, and she chose to come and see for herself. Marie, my darling, the best wedding gift we can make to these poor girls is a new foreman. May, you are dismissed."

"But, sir—"

"Not a word," cried Mr. Elder, with lowering brow, and Mr. May crept out with an uncomfortable consciousness of Marie's scornful blue eyes following him.

"You were right, my love. The man's face is sufficient evidence against him," he said.

And a new reign began for poor Jennie Bass and the others, as well as for Simon Pettengill. And Marie never regretted her week's apprenticeship at the Dappleville Calico Works.

Wondering.

A pretty aggravation
Is this tiny sprite of wonder!
Deserves he reprobation
Our airy webs to sunder.
Yet how can I speak thus of him
When I know so well I love him.
O'er me supreme he reigns
In my leisure hours of dreaming;
In my waking hours of scheming
Great achievements he attains.

I have just been wondering about people. Oh, but they are queer when you come to think of them, and when you come to think of them again, you wonder what there is queer about them, after all.

We used to have a very old-fashioned sugar-bowl. Well, having grown up with it, I never thought of thinking of it until one day, while I was sitting at table in a half-dreamy mood, it suddenly struck me that that particular bowl was extremely odd, and there immediately came into my mind the picture of an individual who would have been likely to have designed such a queer bowl, and I wondered and wondered about him and his idea until I came to the table again, when, if you'll believe it, I began to puzzle afresh as to what I had wondered at in the first place, and I finally settled my mind to the fact that it was, after all, but a commonplace sugar-bowl, and the cobweb was gone.

So, the other day, a fruit vendor asserted himself as the chief picture in my mind. He was queer, too, with his grizzled hair, his dreamy appearance, his ungainly manner, and his sharp, half-thoughtful eyes. What was he thinking of all day, sitting in his low chair in the sunshine, a piece of canvas stretched to windward? Was he a day-dreamer, or were the pictures of his childhood's home in sunny Italy passing before his mind in panoramic form, or was he a practical, common-sense man. Well, something vexed me just then, and I came to the conclusion that he was, and the picture vanished.

Just so, often, something presents itself, and and the very cause that brings it—wonder—will drive it away again.

A Fargo special says: Rufus Hatch and a party of English and New York capitalists have purchased 750,000 acres of grazing lands lying between the Little Missouri and Powder rivers, in Montana, from the Northern Pacific railroad, at one dollar per acre and seven years' time. As the grant to the road only takes alternate sections, they will have practical pasturage of 1,500,000 acres, as it will have the use of the intervening sections of Government lands. It is proposed to stock it with 50,000 head of cattle.

Luminous Photographs.—A film is made of perchloride of iron and tartaric acid on a surface of softened glass; when it has been exposed, sulphide of calcium, rubbed to a very fine powder through a sieve, is dusted over it. The image is formed in the same way as if it had been dusted with any other powder, and it can then be transferred to paper.

Over 70,000 persons are said to be members of the Amalgamated Association of Iron and Steel Workers.

New Method of Piano Teaching.—Bro. John Cooper, of this city, has issued a very useful little book, which will be appreciated by all who have ever taught the organ or piano, and will be appreciated, also, by those who are learning. It is particularly applied to teaching the scales. Each major and minor scale is given in musical signs in the usual way, and under each is a graphic representation of the key-board, so marked as to indicate to the eye the proper notes to be struck in running the scale, and also the fingers to be used for each hand in each note. The diagrams will impart to the young student a correct and practical knowledge in fingering and facility of performing. They are based on the knowledge that the young intellect may be reached more easily through the eye than the ear. It is really teaching music by pictorial illustrations, just as other things are taught by illustrations. Each diagram is self-explanatory, and presents to the pupil at a single glance much more information than can be conveyed by many paragraphs of descriptive matter. Each diagram for its respective scale tells which note to begin and finish on, which are the proper sharps or flats for the key under consideration, and also the proper fingering. There is a short introduction on music, the notes, etc. On the diagram, round marks indicate naturals; square ones, sharps or flats; figures on the rounds or squares indicate the proper fingering. There could be nothing simpler than this, and it will be a great help, indeed, to both teacher and taught. It is a decided advance step. This method is highly spoken of by professional musicians and teachers. Bro. Cooper has secured a copyright for this method through Dewey & Co.'s Patent Agency.

Louis Dampf & Co.—Since the visit of Oscar Wilde to the Pacific coast, the demand for bric-a-brac and artistic workmanship in the decoration of the family home has increased ten-fold. Bro. Louis Dampf, the well-known gold frame manufacturer, whose factory is located under the Hibernia bank, has a large and varied assortment of frames made of all kinds of woods, which are elegant, and many of a very costly character. This firm not only manufactures, but imports, also, oil paintings, chromos, engravings, paste portraits, mats, etc. Bro. Dampf will always be pleased to show anyone through his factory.

Mr. J. D. Horan, the "accomplished" stock man, whose extensive yards at the corner of Tenth and Howard streets are his headquarters, buys and sells cattle and horses on commission. There is, perhaps, no other person better acquainted with his business than Mr. J. D. Horan is with his. He has been in the business for 20 years, and needs but to glance at cattle and horses to know their value. Parties contemplating purchase or sale of horses or cattle will find it to their interest to give him a call.

Messrs. Geo. Wood & Co have removed to 749 Market street, and have opened a large assortment of goods in their line. Stationery, books, fancy goods and engravings a specialty. This popular firm is always on the top round, and brethren will find it pleasant as well as profitable to deal with them. Bro. Geo. Wood makes a specialty of making Lodge seals, and has the patronage of most of the societies on the coast. His artistic work and designs are not exceeded by any house in this city.

Messrs. Coffin & Mayhew, the enterprising druggists, corner of Sixteenth, Valencia and Twentieth streets, keep constantly on hand a varied and extensive collection of the best, freshest and rarest drugs and chemicals. Prescriptions prepared from fresh drugs at very reasonable rates. This genial and popular firm will always be pleased to attend to the interests of their customers.

Bro. Jas. Wylie, 20 and 22 Seventh street, near Market, manufactures all classes of vehicles to order, and has an extended variety in stock at his large factory. Milk, grocery, and four spring wagons for the country are sought after of his style and make. He also has a department for painting and repairing.

One of the best local Singer sewing machine agencies in this city is that of Bro. A. J. Pommer, No. 151 Fourth street. He buys and exchanges sewing machines of all kinds, and will rent a good machine at two dollars per month. Anyone desiring anything in his line would do well to call on our genial brother.

Proof of the Pudding.

Any housekeeper who so wishes, can satisfy herself as to the merits of different baking powders by a simple practicable test. Make two batches of plain cake—one with the New England Baking Powder, and the other with any other brand she desires to compare with it. When baked, put away for two days and then taste both. A lady states that she tried this, and the result was the cake made with the New England Baking Powder was moist and quite as palatable as if perfectly fresh, while the other was dry, crumbly and unfit to be eaten. It is useless to argue against facts. A powder composed only of cream of tartar and soda rightly combined is the best to use. Those adulterated with ammonia and other "modern improvements" may appear to do the work, but the bread, cake or biscuit made with these rapidly deteriorate, and certainly cannot be healthy. ***

List of U. S. Patents for Pacific Coast Inventors.

From the official list of U. S. Patents in Dewey & Co.'s Scientific Press Patent Agency, 252 Market St., S. F.

For the Week Ending July 25, 1882.

261,653.—Grain Cleaning Apparatus—T. S. Bayley, Chico, Cal.

261,667.—Magazine Fire-arm—J. M. & M. S. Browning, Ogden, U. T.

261,672—Sanitary Steaming Stove—H. Cartwright, Portland, Oregon.

261,700—Direct Acting Steam Pump—John Gates, Portland, Oregon.

261,741—Carriage Brake—Angus McKellar, Fort Douglas, U. T.

261,759—Dirt Scraper—Jas Portcous, Fresno, Cal

261,773.—Blind Bridle—Joseph C. Simpson, Oakland, Cal.

For the Week Ending August 1, 1882.

261,976—Book Mark and Paper Cutter—Frank D. Adams, Auburn, Cal.

261,914.—Beer Faucet—R. Eberhard, S. F.

262,184.—Grain Spreader for Threshing Machines—R. H. Johnson, Woodland, Cal.

261,857.—Egg Beater—Geo. M. Kitterman, San Rafael, Cal.

262,123—Construction of Cable Railways—Henry Root, S. F.

262,167.—Wood Planing and Sawing Machine—Jos. F. Welch, Globe City, A. T.

Note.—Copies of U. S. and Foreign Patents furnished by Dewey & Co. in the shortest time possible (by telegraph or otherwise) at the lowest rates. All patent business for Pacific coast Inventors transacted with perfect security and in the shortest possible time.

The increasing cost of wood for constructive purposes and for railroad ties, is one of the most serious problems which confront the managers of railroads. Processes of preservation of wood have been tried with more or less success on nearly all of our trunk lines. The latest method suggested for the preservation of bridge timber and ties, consists in subjecting the finished timber first to dry heat, and then immersing it in a hot bath composed of asphalt and carbolic acid. On cooling, the solvent of the asphalt evaporates, leaving a skin or coating of asphalt on the surface of the wood that resists water and keeps the antiseptic material locked within the pores of the wood. The exterior of the wood presents a smooth and dark surface, requiring no painting. It is understood that the process is to be used on a large scale on one of the Canadian trunk lines.

Burnham & Lynch, wholesale grocers, on Market street, at the Bay City market, carry a large stock of choice groceries, and make a specialty of supplying families with fine coffee and the best quality of teas.

Citizens of Nevada City are subscribing to the fund being raised to construct a debris dam at the narrows above Smartsville.

SEVENTEENTH
Industrial Exhibition
OF THE
MECHANICS' INSTITUTE
Will Open to the Public on
Tuesday, August 15th, 1882,
AT THE
NEW PAVILION,
Larkin, Hayes, Polk and Grove Sts.,
AND CONTINUE UNTIL SEPTEMBER 16.

PREMIUMS of Gold, Silver and Bronze Medals, Diplomas and Cash, will be awarded to meritorious exhibits in Art, Manufactures and Natural Products.
Full information will be given or sent by applying at the office, 27 Post street.

Wrought Iron Philosophically Considered.

Dr. Anderson, in his lecture on "Tools," lately delivered in Manchester, England, said:

When we think of any sort of material, beyond the working treatment of their mechanical properties, we seem to be in another world. Take, for example, a piece of common wrought iron. It seems to us as of the earth earthy; but, if we are closely questioned in regard to the reason for its various properties, we find that we scarcely know anything. Tracing it from the ore through its various stages until it is in the hands of the smith, is comparatively easy. We know the natural law that governs its elasticity, the limit of its elasticity, its ultimate strength; that it can be welded; that it is ductile, and can be drawn out into a fine wire, that it is malleable, and can be spread out into a sheet, or worked round from the sheet into a goblet, and may be gathered back again, if by so doing it served any useful purpose; but when we think of the marvelous changes which have taken place amongst its molecules during the operation, we are lost in wonderland. To many minds, the piece of cold iron seems to be a solid; under the pressure of the testing machine, it is shown to be an unstable fluid. When the smith has the misfortune to leave a piece too long in the fire, it vanishes; it has found evil companions, and gone off under an assumed name and a new character. When a piece of iron is broken and carefully examined under a microscope, we can see that it is composed of fine crystals; but these crystals, we are told, are composed of innumerable molecules, which are not to be seen by the microscope, being smaller than the human mind can imagine; still, the smith feels himself under their influence. In homely words, he speaks of the iron being "red-short" or "cold-short," without thinking that he is on the threshold of some of the impenetrable secrets of nature. The steel-maker can take advantage of the molecular properties. With heat he can push them asunder and infuse amongst them the subtle vapor of carbon, and the iron becomes steel, highly improved in most of its mechanical properties, and with an increase of strength and elasticity. It may be inferred that each iron molecule is a little world in itself, surrounded with a thin wrapping of infinite space, no single molecule being in actual contact with any other molecule. We have reached the limit of sub-division, so far as the engineer dare venture. The investigating philosopher, however, ventures much further with his speculations; he tries vainly to penetrate into the supposed ultimate atoms of matter of which the molecules are composed, but further we need not follow. Suffice to say, that a piece of common wrought iron is altogether a mystery, and teaches man the lesson of humility.

SOUNDS PRODUCED BY THE EFFECTS OF JETS ON DIAPHRAGMS.—It was discovered in 1826 by a French engineer, that when a plate was held normal to the axis of a jet issuing from an orifice under pressure, and at a certain hight above the jet, it was repelled, whereas if held lower, it was attracted. It was also found that there was a neutral point at which the plate was supported on the jet, and emitted an audible note as it oscillated about this position of equilibrium. It may not be without interest in this connection, to state that M. Th. Vautier has recently succeeded in evoking very high sounds in this manner, and registering them. With a jet of steam having a pressure in the boiler of 4½ atmospheres, and issuing from an orifice about 1 inch in diameter, against a plate ½ inch in diameter and .06 inch thick, held .007 inch from the orifice, a sharp note was obtained, the number of vibrations per second being about 7,250.

WHEN TO APPLY PAINT.—Paint, to last long, should be put on early in winter or spring, when it is cold and no dust flying. Paint put on in cold weather forms a body or coat upon the surface of the wood that becomes hard and resists weather or an edge tool even, like slate.

Mechanics.

If young mechanics, as a rule, would fully realize their own usefulness, and assert their own individuality, others would feel the benefit of their awakening as well as themselves. There is no class of the community upon whom the welfare of the country more essentially depends than upon the rising generation of young mechanics. If they are intelligent, sober, industrious, and consequently independent, able and accustomed to judge for themselves, and governed in their conduct by an enlightened view of their own best interests; if they are men of this sort, the mechanics, and especially the young mechanics, will form, in conjunction with the young farmers of the country, a bulwark against monopolies and corrupt politicians, and save the republic. If, on the other hand, they are ignorant, idle, dissolute and, consequently, poor and dependent upon those who are willing to trust them—if our mechanics should unhappily become such a class—they would soon be converted into the mere tools of a few rich and artful men, who, having first stripped them of every sense of self-respect and every feeling proper to virtuous citizens, would use them as passive instruments for promoting their own ambitious objects, and for the enactment of laws which are beneficial to nobody but the few artful and base demagogues with whom they originate. It is as true of the mechanical arts as of any other profession; that "knowledge is power."

BAND SAWS VS. CIRCULAR SAWS.—The German industrial papers are discussing the question of the disadvantages of circular saws as compared with band saws: 1st. Circular saws are very dangerous to the workmen. 2d. They require a much greater power to drive them than any other kind. 3d. They make a much wider cut, producing more waste, and thus fewer products from a given amount of material. The only advantage is that the cost of procuring a circular saw is less than that of a band saw; but, notwithstanding, the Mechanics' Association (*Gewerbverein*), of Muehlhausen, have already published in their yearly report the advice to abolish their use wherever it is practically possible to do so; and this is of course the case in the great majority of circumstances.

THE friction of a belt is claimed to be double as much on wood as it is on iron.

SILICATED CARBON FILTERS.—Professor Wanklyn has, it would appear, been conducting a series of exhaustive experiments, which have, off and on, extended over some years, with the object of ascertaining the peculiar action of "silicated carbon" as a filtering medium. The results of his investigations we find detailed in a paper on filtration, lately read by him at the Sheffield meeting of the British Medical Association. The one broad fact arrived at is that silicated carbon possesses, in a high degree, the property of decomposing nitrogenous and organic matters, and this, though they be contained in very dilute or comparatively strong solutions. Water containing nitrogenous matter, animal secretions and excreta, as milk and urine, greatly diluted, with solutions of quinine, morphia and strychnine, were, among other liquids, made to pass through the filtering material and with striking results. In the case of the quinine and strychnine experiments, 8¼ and 8¾ grains respectively of these intensely bitter alkaloids were dissolved, each in one gallon of water, and after filtration of the solution they were found to be devoid of bitterness, a striking proof of the thorough decomposing or eliminating action of the material. The careful investigations of Prof. Wanklyn establish the reputation of the silicated carbon filters on a yet surer basis, and point to their complete trustworthiness among much that is untrustworthy in the way of filters.

IMPRISONED TOAD.—Here comes that imprisoned toad again; this time the Homer *Mining Index* finds him, saying: A common toad was found packed under a large boulder 35 ft. beneath the surface, in the Lone Tree shaft of the Lee Vining Creek Hydraulic Mining Association a short time since. When released he skipped about as nimbly as if he had been feeding on flies instead of having been buried for perhaps thousands of years.

A SEAMLESS SHIP.—Some time since it was proposed by a mechanic in Philadelphia to build steamships of one solid piece of iron or steel, without seam or joint. This he was to accomplish by welding the plates and frame, instead of using bolts or rivets. He claims that he has invented machinery by which the thing can be done, at a great saving of cost, of weight and of time, and with a great gain of strength and durability.

F SHARP MINOR HARMONIC.

[Copyright secured 1881, according to Act of Congress.]

A NEW AND EASY METHOD

FOR TEACHING THE

SCALES OF THE PIANO AND ORGAN,

Giving a pictorial illustration of each Scale—Major and Minor, the latter in the Harmonic and Melodic form. Each Diagram is self-explanatory, showing at a single glance the keys to be struck in each Scale, also the proper fingers to be employed thereon. This method of teaching the Scales by illustrations is based upon the knowledge that the young intellect, or that of the adult, can be more readily reached through the eye than the ear, it being a recognized fact that teaching by means of illustrations is most interesting, and when available, the best method known.

A thorough knowledge of the scales and a brilliant execution of the same, is the basis of all future excellence in piano playing. The above Diagram, as will be seen, represents the Scale of F Sharp Minor Harmonic. The round and square marks represent the keys to be struck, and the figures in the marks indicate the fingers to be employed. The upper figures for the right hand, the lower for the left. 1 being the thumb, 2, 3, 4 and 5 the fingers respectively. The round marks are the natural keys of the Scale. The square ones are the Sharps which are necessary to place the half notes in the correct place in the Scale. From the above example it will readily be seen that the illustration becomes a great factor in reading the notes on the staff. This is a short road to acquire a thorough knowledge of the Scales, rendering the study and practice of this most important branch of Musical Education interesting to the pupil, and vastly mitigating the work of the teacher. The book contains forty illustrations, together with the elements of music in a brief form, suitable for beginners.

For sale at all Music Houses. Sole Agent, JOHN THOMAS, 24 New Montgomery St., Palace Hotel Block. Agents wanted in every town on the Pacific Coast. A liberal discount to Agents and Teachers. For further particulars apply to JOHN THOMAS, Sole Agent for Cooper's New Method for Teaching the Major and Minor Scales of the Piano and Organ.

DEWEY & CO.'S

Scientific Press  Patent Agency.

[ESTABLISHED 1860.]

Inventors on the Pacific Coast will find it greatly to their advantage to consult this old experienced, first-class Agency. We have able and trustworthy associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other Agencies. The information accumulated through long and careful practice before the Office, and the frequent examination of Patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 252 Market St., S. F.

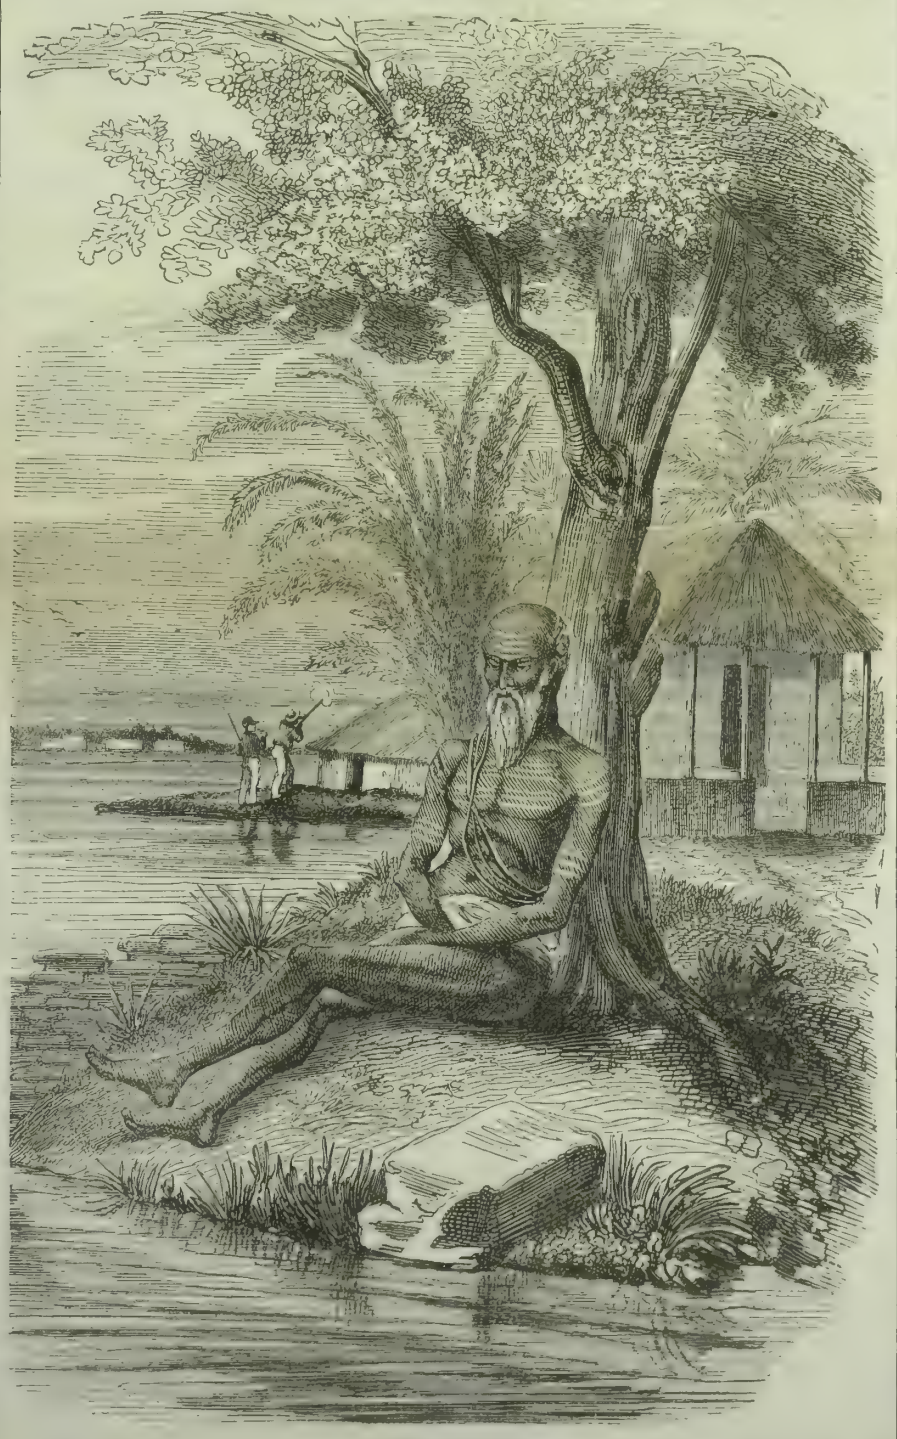
Anniversary of California Lodge, No. 1.



One of the finest and most enjoyable entertainments ever given in Oakland was that of the above Lodge, at Masonic Temple, on the occasion of its seventh anniversary, Monday evening, August 21st, consisting of a banquet for members of the Lodge and invited guests, and a ball to members of the Order generally. At eight o'clock over 100, including ladies and guests, sat down to the table in the banqueting hall. Bro. Charles Strachauer, the Master Workman of the Lodge, presided, and in a happy and appropriate address cordially greeted the brothers and sisters. He adverted to the work done by the Lodge in the past, and spoke of the prosperity which awaited the Order in the future. His remarks were received with great enthusiasm, after which the guests proceeded to partake of the repast spread before them. Following this came the "feast of reason and flow of soul." Sentiments being in order, the first one proposed was, "The Ancient Order of United Workmen," which was responded to by the Grand Recorder, Bro. Horace G. Pratt, who gave a brief history of the Order on this coast, from its foundation to the present time. He spoke of the little band of earnest men who, on that night, seven years before, gathered around the Workman's altar, and there pledged themselves to that great work which, in the short space of time elapsed since then, has carried consolation to so many desolate hearts, and lightened the weight of affliction and suffering. He spoke of the results accomplished in the short space of seven years, and paid a high tribute to the men who were the pioneers of the Order (many of whom were present). His speech, short as it was, abounded with interesting reminiscences, and elicited marked attention. The next sentiment proposed, "The Supreme Lodge and the Grand Lodge of California," was responded to by Bro. Wm. H. Barnes, Grand Master Workman, who gave a short sketch of the proceedings of the Supreme Lodge, and the work done by the Order generally. He alluded to the donation made by the several State jurisdictions to Father Upchurch, the founder of the Order, to aid him in his declining years, showing that while the great States of New York, Pennsylvania and Indiana gave sums from $40 to $170, California answered the call with the generous donation of $1,014; and when in their astonishment, the members of the Supreme Lodge asked him if the people of California were made of money, he answered that they were not made of money, but that they were always willing to testify their appreciation by their generosity. And it was the spirit manifested by his State that made him proud to be known as a Workman. He spoke in glowing terms of the work performed by Bro. Pratt, and paid a merited compliment to California Lodge. He likewise spoke of the high character of the membership, the influence it exerted on the community, and the importance of individual effort in carrying out the principles of fraternity. His apostrophe to "Hope," as the inspiring sentiment of the Order, was elegant and appropriate. Always eloquent and happy in his remarks, Bro. Barnes' speech was crowned with merited applause.

"California Lodge, No. 1," was responded to by Bro. Wm. Harrison Wood, who referred to the charities of the Lodge and the work accomplished during its existence. He spoke of its early trials, its moments of doubt and uncertainty, and the earnest efforts of its founders to promote its success. He recounted several incidents connected with its early history, one of which—the first death in the Order and the prompt payment of the beneficial certificate—having been the cause which gave the first impetus to the growth of the Order, showing that the success and development of great enterprises are often attained through private grief and affliction. He said, that while he did not think a person should ever be proud of anything, yet he could not avoid feeling an honest exultation at thought that he was a member of the *first* Lodge established; that the anniversary of California Lodge was the anniversary of the Order; that he had shared its troubles and adversities, and that he had helped to erect and sustain the humble structure which had developed into a temple of such magnificent proportions. He spoke of the splendid possibilities of the Order, and that it was destined to be the leading one in the nation. He gave, as a reason for this opinion, the earnest character and indomitable zeal of those who established the Order, and, as an illustration, concluded his remarks with a humorous and appropriate story, which excited roars of laughter and hearty applause.

At the conclusion of the banquet, dancing followed in the large hall, under the able direction of Bro. Joseph Hollywood, Floor Manager.

The following brothers composed the several committees, to whose well-directed efforts the success of the entertainment was due: Committee of Arrangements—Wm. Harrison Wood, J. J. Lawler, S. J. Clarke, J. N. Harris, J. B. Donahue. Reception Committee—W. H. Fiske J. Cook, C. R. Knapp, Henry Marsden, M. B. Smith, J. B. Myrick. Floor Committee—Geo. N. Berdan, J. M. Cohen, Geo. Hadsell, W. H. Wilkinson, Geo. W. Jones, Orrin Allen.

Among those present were M. W. Fish, Supreme Foreman; Wm. H. Barnes, Grand Master Workman; Bro. E. F. Loud, Deputy Grand Master Workman; H. G. Pratt, Grand Recorder; J. W. Watson, Deputy Grand Recorder; Chas. E. Alden and J. J. Schultz, D. D. G. M. W. Several other prominent members of the Order were invited, but business engagements prevented their attendance.

THE FAKIR.

The Fakir.

India possesses a class of religious mendicants whose religion teaches them to endure hardships of all kinds, and to inflict upon themselves castigations so severe that they often fall victims to their strangely misdirected zeal. Mohammedanism also has kindred devotees, with whom Americans who have traveled in Turkey or Egypt will be familiar. We refer to the howling and dancing dervishes.

But whatever sufferings the disciple of Christ or Mohammed chooses to suffer for the sake of his religion, they are scarcely to be compared with those the fakir (pronounced fah-keer) will undergo on purpose to reach Brahma's bosom, and he will tax his ingenuity to its utter extent to invent, perfect or vary the horrible cruelties he commits upon himself in his mistaken idea of what will be grateful to his God. Some of them will fast for days, even weeks, others will make a vow to bend an arm behind their back, or stand on one leg so long that the muscles of the limb shrink in and prevent it from ever again taking its natural position. Such a one the writer saw in Kurrachee (Sind), who passed his time in mute adoration, standing on one leg upon a big stone, without any protection against a torrid sun, and never descending his pedestal but to partake of a little boiled rice, or to snatch a few moments of sleep when overtaxed nature became too exhausted.

Others, again, will bury themselves in the ground up to the head and suffer the bites of termites (white ants), or other tropical insects whose bite is equally painful. In fact, there is no suffering these poor, deluded heathen can think of they will not cheerfully and readily undergo on purpose to deserve the right of entrance to the seventh heaven.

High-caste Hindoos, being strict vegetarians, even when rich, have but little variety in their food, but the fakir, who is an ascetic, has but one article of food, rice, which he eats sparingly. The consequence is that fakirs are the most skeleton-like beings it is possible to see, their thinness being the more apparent from the fact that they scarcely ever have more covering than a rag around their loins.

The fakir shown in the engraving is meditating under a tree upon the banks of the Ganges, with his cabin a few steps off, and may, for aught we know, be calling the vengeance of Krishna, the destroyer, upon the two hunters near by, who disturb his saintly thoughts by taking living beings' lives near by, an action which is the most heinous sin in the religion of the Brahma.

FIDELITY SOCIAL CLUB held its first party on Wednesday evening, August 16, 1882, at Red Men's hall; dancing commenced at nine o'clock, and everyone present had a good time till midnight. The following is the programme (music by Ballenberg). Our next social will probably take place in Fidelity hall, on October 13th next, the third anniversary of the Lodge. Order of dances: —Lancers; waltz; schottische; waltz; lancers—Centennial. Coffee. Waltz; schottische; lancers; waltz; medley; extra; extra. All hands join in a Virginia reel. "Good night!" The following are officers of the club: J. G. Giesting, President; Jno. W. Rourke, Vice-President; J. B. Russell, Treasurer; E. C. Beals, Secretary. Executive Committee—Geo. R. Sanderson, P. M. W.; L. L. Dunbar, P. M. W.; Wm. Fulton, L. W. McGlauflin, Wm. B. Smith, P. M. W.

HARPIES.—Mention is made of the fact that a colored man died Monday in Wilkesbarre, Pa., on whose life, at one time, death-rattle insurance companies had $200,000, but he outlived them all. In Harrisburg yet lives an ancient colored man on whose life was $110,000, and he can get around very lively yet.

AN exchange says that a flock of wild geese was seen going south last Tuesday evening, in a quantity of hash. That is, to explain, the geese were not going south in real, genuine hash, but exchange hash—A "Hash" column, at least this is where we saw the item.

Home Miscellany.

The Milk Maid.

[By J. O. C.]

"Come, let us call the cows," she said,
"I hear the tinkling bell,
In the meadow, by the winding brook
That runs through 'fairies' dell.'"

They looked up from the tender grass
And all the herd stood still,
To hear the milk maid calling them,
Up on the pasture hill.

The sunset clouds have frescoed now
The over-arching dome,
And, winding up the pasture path,
The full-fed cows come home.

They come, although she hides herself
Behind the apple tree;
They know the kindness of the voice
That sounds so sweet to me.

She pats them with her soft, white hand,
The old ox with the rest,
Who moves his ears, and chews his cud
With such a lazy zest.

She sings, and o'er the meadow land
It echoes sweet and clear;
The very birds upon the trees
Seem sitting still to hear.

And white and sweet and pure the milk
That mantles o'er with foam;
And pure in life and thought is she
Who takes the milking home.

And white the aged grand-sire's locks,
Who sits beside the door,
And waits for her to read the book
That he can read no more;

For her to sing the songs he loves,
And there he sits in tears,
To hear his mother's songs, whose voice
Sounds through the lapse of years.

Oh, full-ripe fruit, and bursting bud,
Thus twined in life together!
Alas, the bud is doomed to bloom,
And fall in wintry weather.

But while the summer sun is warm,
And life is yet to be,
Give me your hand and then walk down
The pasture path with me.

The daisies by the path we'll pick,
The daisies in the dew,
And I will carry the milking-pail
And call the cows for you.

"Wouldn't Marry a Farmer."

The old house at Stonecrest was the most ancient mansion in the county. Its walls of dark gray stone were almost entirely covered with ivy and climbing rosevines. Year after year Mr. Thornfeld threatened to cut the creepers down, but he failed to do it, until the roses were over the second-story windows, and the ivy clear to the roof.

Perhaps they were spared because Mrs. Thornfeld loved them. And indeed they did give an air of beauty to the square, gray old house, which no one could fail to notice, and which resembled the pictures of ivy-grown English homesteads very strongly.

When Edith Thornfeld, the Squire's pretty niece, came down from the city for a long visit, she chose for her room the corner one in the second story, the coolest room in the house, wide, light and airy, where the windows were nearly covered with vines, and every breeze sifted a shower of rose leaves across her floor.

Pretty Edith! Proud as pretty was Mr. Thornfeld's niece. Her father was a rich business man in the city, who knew far more about stocks, bonds and mortgages than he did about his only daughter. Her mother died when Edith was a babe, but kind Aunt Rachel, Mrs. Thornfeld of Stonecrest, had supplied her place as far as she could, and much of the girl's lady-like bearing had been acquired from her. Edith often came down for a long visit, and the old house was the brighter while she remained.

Joining Stonecrest was another fine estate, belonging, at present, to young Robert Belton. A fine, wholesouled specimen of a country squire was he, not without good mental cultivation and intelligence, and any girl might be proud of his favor. Even Edith admitted that he was a splendid-looking fellow and good company, and she knew very well, the sly witch, that no one was fairer in Robert Belton's eyes than she. But when they rallied her upon the devotion of her cavalier, she declared that nothing upon earth would induce her to marry a farmer and live in the country for good. To do her justice, she let Belton himself see the fact plain enough. That is, if he would have seen it. But he refused to take the evidence of her manner: perhaps laid it to the score of maiden modesty, and liked her all the better for it.

"Well, I'm sorry for the poor fellow—he is nice, and if it was'nt the way it is, I might—possibly—say yes," said Edith, when she saw, at last, that she could not keep him from speaking much longer, "I dare say he'll soon get over it, and forget all about me, when he marries some plump country girl who can take care of his pigs and chickens for him." And Edith laughed a gay little laugh, and then felt as if somehow things were not fixed up quite right in this world, and she did'nt know just how to straighten 'em. She tried no longer to keep him from speaking. "Just as well have it over and done with," she said.

He did speak one evening when she had been over to visit his sister, and he walked home with her. A few words, but right to the point.

"I wish you wouldn't," said Edith, more flurried than she had ever been in her life. "I'm very sorry, but indeed, Mr. Belton, I can't—"

"Do you mean you can't like me?" said Robert, turning a little white, but trying to smile.

"Oh, I do like you very much! But not—not in——"

"In the only way I wish to be liked. Is that it?"

"I'm afraid it is, Mr. Belton."

He was silent a moment. Then he said huskily: "If any amount of waiting would alter it, I could be patient, at least I'd try, if I might have a hope—" and here his voice failed.

"It wouldn't be of the least use, said Edith. "I'm sorry, but I'd have to say the same a year—ten years—from now."

"Then there's no use," said Belton, trying to be as brave as he could. "It's pretty hard on me—harder than I thought it would be. But if I can't bear it, I can go away and not trouble you any more."

"I wish you wouldn't talk so," said Edith.

"It isn't very manly, is it?" said the poor fellow. "Well, I won't. Forgive me, Miss Edith. And good bye—I don't suppose I shall come to your uncle's any more." They were just at the gate now, and Edith gave him her hand, saying, "Oh, yes, of course; I know you will come. We would all be very sorry if you didn't. And I hope you don't blame me."

"Not in the least. There's no one to blame but myself. I'll come if I can. If I find I can't, why, I can't, thats all. Good-bye, Miss Edith; God bless you, my dear." He raised the small hand to his lips, pulled his hat down over his eyes, and was gone.

Edith ran straight upstairs to her room, and took a good, hearty cry—and then scolded herself for crying.

"But I did feel awful sorry for him," she said. "Though I'm sure he'll get over it, and be back here in a day or two."

But Robert Belton did not come again in a week or two. Uncle Thornfeld rallied Edith about sending him away, and though she declared she had not done so, they all understood very well how the case lay.

Edith met Belton in her rides sometimes, saw him at church and other places. He always bowed and spoke pleasantly, but that was all. He kept clear away from her. It was plain he did not mean "to trouble her again."

"I never saw such a fool," said Edith, to herself. "He doesn't give one the least chance to re-consider, if one wanted to, which I don't, I'm sure."

But some way it provoked her dreadfully every time she met him, and he kept so distant. Now and then she stole a glance at him in church, when he was sitting quite still, and his pale, sad face touched her heart, though she wouldn't have owned it for anything. "I never, never did see such a simpleton! If I were a man, I'd be one, I would!" said she. But the very next night, when she was talking to little Lyons, at Mrs. Wishwell's social, or rather listening to him talk, she looked at his little, neat figure and his little, nice moustache and his little white hands, and began to compare him with a big, strong, manly fellow like—like Rob Belton, for instance, and became so disgusted that she fairly ran away and left little Lyons terribly astonished and affronted at her rudeness.

One day, at the dinner table, Uncle Thornfeld gave them the news that Robert Belton was going to Australia. His sister felt dreadfully, he said, but Rob wouldn't give it up. Uncle said, also, that for his part he couldn't see any sense in a likely young fellow, with plenty of good land, and everything ready to his hand, rushing off with such haste to a wild country like Australia, "unless," said he, "unless there's a woman in the case. If there is, there's no knowing what a man will do. And it's my opinion she'll have something to answer for." This with a glance at Edith, who turned very red, and did not offer a single word. But she took to walking out often. If she did so in the hope of meeting Belton, she missed it. He was busy arranging his affairs indoors, and had no time for walking.

One morning Edith, sitting at her window, saw him coming up the road, with his long, free stride, straight to the gate. He opened it; he came inside; he came straight to the house, too. Edith, drawn back so she could not be seen, heard him pass under her window, and waited to be called. Waited half an hour, and then heard him going away, and never once was called at all! Her face was red, and her eyes flashed, but she was only pretty and sparkling when she went down to dinner.

"Belton called this morning," said Uncle Thornfeld.

"Did he?" observed Edith, indifferently.

"Yes. He goes away Monday. He wants me to attend to a small business matter concerning some land, while he is gone."

"Well, you'll do it, I suppose," said Aunty.

"Oh, yes. He'll call again to-morrow, to leave me some papers, and I'll help the boy all I can. He's a good fellow. And it strikes me he seems to be very unhappy."

"That's a pity, isn't it," remarked Miss Edith, coolly.

"I think it is. I don't know a man who deserves better than Belton. I dare say he'll get killed out there among the natives, and never get back any more." Which philosophical observation on uncle's part Miss Edith did not answer at all, and nobody knew her thoughts.

"To-morrow" was Saturday. Belton was going away Monday. If anybody meant to do anything for him, it must be done promptly; that was all; and no shirking.

The next morning Edith took pains to sit at her window again. By and by she saw Belton coming. But he wouldn't ask for her; not even to say good-bye. It couldn't hurt him to do that much, anyhow.

He came in, turned at the corner of the house, and was passing on to the door, when a fresh voice above him said "Good morning!"

He looked up. Edith, sweet and blooming as the roses which were all around her, was leaning out of the window, toward him. But he couldn't know she was thinking what a fine, noble, handsome face he was turning up to her.

Instantly his hat was lifted. "Good morning, Miss Thornfeld! I hope you are well."

"Quite well, thanks. I hear you are going away, Mr. Belton."

"Yes. I go Monday."

"Without a good-bye to your friends?"

"I don't suppose anyone cares much about saying good-bye to me."

"Perhaps not. You don't deserve it, running off so wildly."

"I dare say I don't, Miss Thornfeld."

"Of course you don't! However, some of them might have a word to say to you."

"I'd be very glad to hear it then, I know."

"Well, I shall be down at the three oaks at four this afternoon. If you choose to come, I have something to say. If you don't choose, go to Australia or any other place, for all I care, Rob Belton!"

The pretty head disappeared in an instant, the window went down among the roses with a bang, and Robert Belton walked into the house to see Mr. Thornfeld, feeling very queer.

At four that afternoon, a slim figure in buff cambric, with a white lawn hat on its pretty braids, tripped through the bit of meadow woodland down to the three oaks. A taller figure rose to meet her as she appeared.

"Ah, you did come, then?" said Edith.

"Certainly. Sit down, Miss Thornfeld," making room on the rustic seat for her.

Edith sat down, and sat silent. Her usual flow of words seemed to have deserted her.

"Did you wish to tell me something?" said Belton, at last, very gently.

"Yes—no—perhaps. Tell me something, Mr. Belton! Why do you rush off so, and make everybody miserable?"

"I must go. And I don't know of anyone who is miserable."

"Not your sister?"

"Well, yes. But there are times in a man's life when even a sister, though a good, kind one, can't quite satisfy him."

A little silence. Edith broke it, desperately: "Mr. Belton, would you go if——I am sorry I once pained you. I am very sorry, indeed."

"You were kind enough to say so. I don't blame you. And I believe you. But, you see, it don't cure—it don't help much. I don't want to seem ungrateful, but it's quite true that pity won't mend matters."

"My goodness, what would then?" cried Edith, losing all patience. "Can't you see anything, Rob. Belton? Don't you know I don't want you to go!" Her face was red, her eyes full of tears, her mouth fluttering like a rose-leaf as she spoke.

Belton was amazed. "Miss Edith! You don't—do you? What is it you mean? Do you ask me to stay?"

'Of course I do. You might see that much!"

"What for, then?" he asked, quickly.

"Oh, nothing. You needn't stay! Go if you like, I don't care. I can live without you!" she sprung up to fly, but Belton just gathered her into his arms. "But I can't live without you!" he cried. "I'll stay if you'll come and live with me! Say quick, Edith, yes, or no?"

"Yes—no—I don't care!" panted Edith, very red and embarrassed. But Belton gathered her meaning, and, instead of being the miserable fellow he came there, was as happy as a king. So was Edith, though she wouldn't have owned it for the world. She is happy yet, though she did marry a farmer, and lives in the country over half of each year.

And that trip to Australia has never been made, nor do I suppose it ever will be.—*Indiana Farmer.*

MRS. ARTHUR'S ROOM.—It is said that Mrs. Arthur's room in her beautiful New York mansion, in which she died, has never been disturbed; that even the needle is still threaded and sticking in a bit of delicate embroidery in her work-basket undisturbed, nor will her husband allow anyone to change the room in its furniture arrangements. There is the little rocker beside the standard work-basket, and the little negligee crochet slippers. There stands her desk, with the ink dried on her pearl-handled pen, which she had hastily put aside from some interruption, never to use again on earth. Her favorite books are placed in a tiny case, with a marker in one of them, just as she left it. On the table are placed each morning, by orders from the President, a bunch of her favorite flowers. Even her favorite perfumes are in her toilet bottles at the dressing case, and in the wardrobe hang her dresses. This room is bright and sunny, her former maid keeping it neat, and arranging the flowers in the vase, and attending the canaries in the window, but never altering the place of the furniture, the books, etc. This room is a place where the President takes much comfort in reading and meditation, and they who know say that the bit of needle-work has been many times wet with tears by the husband. In this world of forgetfulness and selfishness it is more than pleasant to read of such an evidence of love for a wife. May such increase an hundred fold!

Chaff.

A DOCTOR went out for a day's hunting, and on coming home complained that he hadn't killed anything. "That's because you did not attend to your legitimate business," said his wife.

SHE laid her cheek on the easy chair against his head and murmured, "How I do love to rest my head against your head, Augustus!" "Do you?" said he. "Is it because you love me?" "No; because it is so nice and soft."

IT is nice to read of the "merry whistle of the plow-boy," but, in the first place, boys don't plow; and in the next, the strapping young men who do are so mad about it that they can't get the right pucker for a whistle.

A MERCENARY little boy overheard a conversation by his parents concerning a wedding that was soon to come off, and recalled the subject at the breakfast table the next morning by asking the following question: "Papa, what do they want to give the bride away for? Can't they sell her?"

A YOUNG lady who has distinguished herself at the Cambridge local examination had just been relating some astounding astronomical facts and figures. Said her cousin, who "never went in for that sort of thing, you know," "I see how one can find out how large and how far away the stars are; but, by Jove, I don't quite see how they ever found out their names!"

JUDGE, severely, "How do you know the defendant is a married man? Were you ever at his house?" "No, sir." "Do you know him personally?" "No, sir." "Did anybody ever tell you they were married?" "No, sir; but, when I see a man and woman come to the same church regularly for three years, occupy the same pew, and have a hymn book apiece to sing out of, I don't want to see no marriage certificate. I can swear to their relation all the time.'

SHORTNESS OF TIME IN DREAMS.—One of the most remarkable phenomena connected with dreams is the shortness of time needed for their consummation. Lord Brougham says that, in dictating, a man may frequently fall asleep after uttering a few words, and be awakened by the amanuensis repeating the last word to show he has written the whole; but though five or six seconds only have elapsed between the delivery of the sentence and its transfer to paper, the sleeper may have passed through a dream extending through half a lifetime. Lord Holland and Mr. Babbage both confirm this theory. The one was listening to a friend reading aloud, and slept from the beginning of one sentence to the latter part of the sentence immediately succeeding; yet, during this time he had a dream, the particulars of which would have taken more than a quarter of an hour to write. Mr. Babbage dreamt a succession of events, and woke in time to hear the concluding words of a friend's answer to a question he had just put him. One man was liable to a feeling of suffocation, accompanied by a dream of a skeleton grasping his throat, whenever he slept in a lying posture, and had an attendant to wake him the moment he sank down. But though awakened the moment he began to sink, that time sufficed for a long struggle with the skeleton. Another man dreamt that he crossed the Atlantic, spent a fortnight in America, and fell overboard when embarking to return; yet his sleep had not lasted more than 10 minutes.

FOUR PROFESSIONAL GIRLS.—The Misses Kollock are four typical Western girls. The family of W. E. and A. M. Kollock, of Madison, Wis., consists of seven members, four of whom are sisters. Of these, Dr. Mary Kollock Bennett, the eldest, graduated at the Woman's Medical College of Chicago, and for many years has been practicing successfully in that city. The next, Dr. Harriet Kollock, graduated in the medical department at Ann Arbor, Mich., nine years ago, since which time she has been eminently successful in her professional work. The third, the Rev. Florence Kollock, graduated at Canton Theological College some years since, and is now doing a good work as pastor in a beautiful church, built for her by her parish during the last two years, at Englewood, a fine suburban town of Chicago. Dr. Jennie C. Kollock, the youngest sister, graduated in the dental department of Ann Arbor, Mich., last March, together with a class of 36 gentlemen, she being the only lady, and passing the highest examination of any in the class. She is now establishing herself successfully as a dental practitioner in Chicago.

SAY WHAT YOU MEAN.—Let your friends know that you love them. Do not keep the alabaster boxes of your love and tenderness sealed up until your friends are dead. Fill their lives with sweetness. Speak approving, cheering words while their hearts can be thrilled by them. The things you mean to say when they are gone, say before they go. The flowers you mean to send for the coffins, send to brighten and sweeten their homes before they leave them. If my friends have alabaster boxes laid away, full of perfumes of sympathy and affection, which they intend to break over my dead body, I would rather they would bring them out in my weary hours and open them, that I may be refreshed and cheered by them while I need them. I would rather have a bare coffin, without a flower, and a funeral without a eulogy, than a life without the sweetness of love and sympathy. Let us learn to anoint our friends beforehand for their burial. Post-mortem kindness does not cheer the burdened. Flowers on the coffin cast no fragrance backward over the weary days of our lives.

For our Boys and Girls.

Our Puzzle Box.

Numerical Enigma.

My whole, consisting of 28 letters, is the dying tailor's advice.
My 24, 20, 23 is very warm.
My 28, 7, 17, 22 is a part of a house.
My 6, 20, 25 is a conjunction.
My 8, 2, 15 is a metal.
My 12, 3, 27, 16 is a part of the body.
My 5, 9, 10, 28 means gentle.
My 1, 14, 21 is a number.
My 4, 18, 11, 26, 22 means following.
My 19 is sometimes used as a vowel.

J. L. C.

Blanks.

[Fill blanks with words pronounced alike but spelled differently.]

1. The clergyman performed the ——— just at the ——— time, but failed to ——— out the certificate in a proper manner.
2. As we ——— yesterday we met our friend upon the ———.
3. A thick ——— of mist hung over the ——— and hid it from our view.

ALICE.

Charade.

As John was walking on the street,
While tempests around him burst,
Amid the mud and falling sleet,
He soon did soil my first.

But, as he wandered on, he met
My whole, who quickly made
My second of my first, and soon
Bright sunshine round it played.

A. B. C.

Decapitations.

1. Behead a part of a vessel and leave a fish.
2. Behead to confound and leave a large cask.
3. Behead to quench and leave a large body of water.
4. Behead to wander and leave a shallow vessel.

NETTIE.

Square Remainder.

Behead and curtail the words having the following significations and get a word square:

1. Indisputable.
2. A growth of hair.
3. To scorch.

Going to the Fair.

The birds are singing,
The bells are ringing,
There's music in all the air, heigh-ho!
As all together,
In golden weather,
We merrily go to the fair, heigh-ho!

We have no money
For ribands bonny,
Our clothes are the worse for wear, heigh-ho!
But little it matters,
In silk or in tatters,
We merrily go to the fair, heigh-ho!

Come, lads and lasses,
The time it passes;
Step out with royal air, heigh-ho!
As all together,
In golden weather,
We merrily go to the fair, heigh-ho!

—*St. Nicholas.*

Something Curious Happened.

A boy 10 years old, pulling a heavy cart loaded with pieces of boards and lath taken from some demolished structure—an every-day sight in all our cities. Tired and exhausted he halted under a shade tree. His feet were bruised and sore, his clothes in rags, his face pinched and looking years older than it should. What must be the thoughts of such a child as he looks out upon the world—the fine houses, the rich dresses, the rolling carriages, the happy faces of those who have never known what it was to be poor? Does it harden the heart and make it wicked, or does it bring a feeling of loneliness and wretchedness—a wondering if the rich man's heaven is not so far from the poor man's heaven that he will never catch sight of their pinched faces?

The boy lay down on the grass, and in five minutes was sound asleep. His bare feet just touched the curbstone, and the old hat fell from his head and rolled to the walk. In the shadow of the tree his face told a story that every passer-by could read. It told of scanty food, of nights when the body shivered with cold, of a home without sunshine, of a young life confronted by mocking shadow.

Then something curious happened. A laboring man—a queer, old man with a wood-saw on his arm, crossed the street to rest for a moment beneath the same shade. He glanced at the boy and turned away, but his look was drawn again, and now he saw the picture and read the story. He, too, was poor. He, too, knew what it was to shiver and hunger. He tip-toed along until he could bend over the boy, and then he took from his pocket a piece of bread and meat, the dinner he was to eat if he found work, and laid it down beside the lad. Then he walked carefully away, looking back every moment, but hastening out of sight, as if he wanted to escape thanks. Men, women and children had seen it all, and what a lever it was! The human heart is ever kind and generous, but sometimes there is need of a key to open it. A man walked down from his steps and left a half-dollar beside the poor man's bread. A woman walked down and left a good hat in place of the old one. A child came with a pair of shoes, and a boy brought a coat and vest. Pedestrians halted and whispered, and dropped dimes and quarters beside the first silver piece.

Something curious had happened. The charity of a poor old man had unlocked the hearts of a score of people. Then something strange occurred. The pinched-faced boy suddenly awoke, and sprang up as if it were a crime to sleep there. He saw the bread—the clothing—the money—the score of people waiting around to see what he would do. He knew that he had slept, and he realized that all those things had come to him as he dreamed. Then what did he do? Why, he sat down and covered his face with his hands, and sobbed like a grieved child. They had read him a sermon greater than all the sermons of the churches. They had set his heart to swelling and jumping until it choked him. Poor, ragged and wretched, and feeling that he was no more to the world than a stick or a stone, he had awakened to find that the world regarded him as a human being, worthy of aid and entitled to pity.—*Detroit Free Press.*

Household Hints

BANBURY CAKE.—Take an equal quantity of clean, well-picked currants, granulated sugar and finely chopped lemon peel, and mix it all together, and then add a nice flavoring of ginger and cinnamon; now add good fresh butter enough to form the whole into a nice paste. Take the best puff paste, roll it out in a sheet one-fourth of an inch thick; cut this in pieces two inches square, and place a piece of the prepared butter, currants, etc., in the center of each; now take the two corners, the one nearest to you and the one opposite to you; bring them up, press them together, and then, with the palm of the hand, press them down flat. This makes the piece oval in shape, and leaves two ends, which are folded together with liberty to rise; wash the part that is not folded with water, and add as much powdered sugar as you can get to remain on. Bake these in a slow heat. These are a little expensive, but are very good, and are the real English Banbury cakes.

SEALING FOR CORKS.—M. Potel has lately introduced a new compound for sealing over corks, and for molding various ornaments, etc. It is made by soaking gelatine in water for a short time, and then dissolving it in glycerine, the former being in excess; to half the amount of glycerine thus used some tannic acid is added, and solutions aided by the heat of a water bath; these solution are then mixed, when the compound is ready for use. Any desired coloring matter may be added, and if required for the fabrication of any small article, sulphate of barium. Pittinson's white (chiefly a hydrated oxychloride of lead) or white lead, may be worked in it until the correct color and texture is arrived at.

SCALLOPED CAULIFLOWER.—Choose a cauliflower of medium size, boil it twenty minutes. Put into a saucepan one ounce of butter, half a gill of milk, and one ounce of bread crumbs. Add cayenne and salt to taste, and stir till the bread has absorbed the milk and butter. Beat an egg, and add this to the sauce, but be sure that it does not simmer after the egg has been added. Butter a flat tin dish, take off the fine leaves of the cauliflower, and place them all around it; break up the flower carefully and lay in the center, making it as high as possible; pour the sauce over this, sprinkle a few bread crumbs on the top, and bake ten minutes.

RASPBERRY CREAM.—Dissolve three-quarters of an ounce of the best isinglass and five ounces of loaf sugar in three-quarters of a pint of new milk, by boiling it slowly for ten minutes; strain it into a basin and add a pint of rich cream, with the juice of three-quarters of a pint of fresh raspberries, which have been cooked with three ounces of sugar for a quarter of an hour. Strain into the mixture, and turn rapidly with an egg-beater until it begins to thicken. Dip a mold in cold water, put in the cream, and place on ice until firmly set. Turn out carefully.

CREAM CANDY.—Boil one pint of granulated sugar and a pint of water, without stirring, until stiff enough to harden when dropped into cold water. Have prepared four teacupfuls of corn starch, rubbed smooth in a very little cold water, and add just at this time. Stir constantly while boiling, for a few minutes longer. Pour into a buttered dish, and when cool enough to handle, work rapidly. Flavor as you pull it.

STUFFED PEPPERS.—The large bell peppers are best for this purpose. Cut around the stem, remove and take out seeds. For the stuffing use finely chopped cabbage, adding grated horse-radish, white mustard seed, celery seed, and salt to suit the taste. Fill the peppers with this mixture, putting in each a small onion and a little cucumber. Tie the stem on and put into cold vinegar.

HARICOT BEANS.—Soak half a pint of the small white beans over night, in just enough cold water to cover them; the next day boil two hours, strain and put in a pie dish with one-half ounce of butter and a teaspoonful of finely chopped parsley, previously fried; cover with slices of raw bacon, and bake a quarter of an hour.

Health Column.

Egypt in August.

"Egypt is as deadly in August as India in June," say old travelers; and this sinister reputation is only too well deserved. The same distempers which almost destroyed the army of Louis IX of France, at Damietta, in the 13th century, decimated the troops of Bonaparte and those of his successors, Kleber and Menou, at Alexandria, in the end of the 18th. Indeed, those who have been in lower Egypt during the unhealthy season may well wonder, not that so many should succumb to the climate, but that any one should escape. The dreadful "khamsin," or hot wind, which the strongest man cannot face without instantly feeling his muscles unstrung, his skin parched and feverish, and his whole body limp and nerveless as a wet rag, is of itself a sufficient agent of evil. The fevers engendered by the malaria of the Nile delta are as virulent as even those of European Turkey, while the devastating visits of the plague itself are neither few nor far between. A less fatal, but equally formidable enemy to an invading army is the terrible "Egyptian opbthalmia," which, although often brought on by the unclean habits of the natives, is at times generated in another and a very singular fashion. A small green fly persistently settles upon the sores of the diseased eyelid, and, when driven off, carries the infection along with it wherever it alights. So common is this disease among the Arabs, that Mehemet Ali is said to have formed two battalions of one-eyed men, the one wanting the right eye and the other the left. In 1798 this complaint made great ravages in the army of Bonaparte, one of whose best officers, becoming blind in the desert, was forced to cling to the tail of a comrade's horse in order to make his way back to the camp. It is a common saying in Alexandria that "an Egyptian Arab with two eyes is as rare as a snowball in June."—*New York Times.*

Malarial Foundations.

The San Francisco *Bulletin*, some time since, commenting upon some of the foundations in existence in this city, makes the following statements: Many of our business houses, and nearly the entire residence portion of our city, are composed of wooden structures built on foundations of similar material. In a few years, floors begin to settle, cracks appear in walls, and owners, becoming alarmed, consult their architects, who, upon examination, pronounce the foundations as rotting, and entirely unsafe in upholding the superstructure. Then trouble begins. The underpinnings have to be taken out and brick supports placed in proper position. A correspondent who has given some attention to the subject informs us that recent scientific investigation developed the fact that the wood used for foundation purposes becomes decayed by contact with the sand, which destroys its fiber, leaving it porous, brittle and of no value. A fungus growth starts from the edge of the decaying wood, and is composed of myriads of infinitesimal insect life, which burrows and honeycombs the remaining wood until its vitality is gone, and the insect itself yields up its life in the wreck of matter. This decaying mass creates a vast deal of malaria, and physicians trace many of the noxious odors and fever-breeding troubles to the festering condition of the underground portion of residences. It has been proved beyond question that when proper foundations are placed beneath such structures, the malarial atmosphere largely ceases to exist, while the occupants are relieved of certain feverish attacks, previously frequent. To parties intending building, this matter is of much importance, and it is suggested that true economy would warrant the increased expense of a brick foundation over that of a wooden one. Nearly all buildings of any value are now being erected on brick foundations, and it is presumable that only the cheapest kind of dwellings will be placed on any other basis.

BUTTERMILK AS SUMMER FOOD, DRINK AND MEDICINE.—A recent writer asserts that for a hot weather drink, nothing equals buttermilk. It is, he says, "both drink and food, and for the laborer is the best known. It supports the system, and even in fever will cool the stomach admirably. It is also a most valuable domestic remedy. It will cure dysentery as well as and more quickly than any other remedy known. Dysentery is really a constipation, and is the opposite of diarrhœa. It is inflammation of the bowels, with congestion of the 'portal circulation'—the circulation of blood through the bowels and liver. It is a disease always prevalent in the summer and autumn. From considerable observation, I feel warranted in saying that buttermilk, drunk moderately, will cure every case of it; certainly when taken in the early stages."

DIPHTHERIA AND FILTH.—It has recently been shown that of the total number of cases of diphtheria reported in New York—1,706—some 1,405 existed where the premises were in a bad sanitary condition, and that 1,342 occurred where the drainage was defective, and filthy cellars, filthy cesspools and overflowed vaults existed. In other words, of the houses in which these cases occurred, 82% were found to be in a defective sanitary condition. This tells the story of the cause of diphtheria, in Boston, at least.

Worth Knowing.

Cold Soldering.

Various nostrums have been proposed from time to time, which profess to be reliable methods of soldering without heat; but when tried, they have generally proved useless. The following recipe, published in the *English Mechanic*, is from Mr. Fletcher, of Warrington, well known for his gas furnaces and other apparatus, and it will probably be found to be trustworthy.

It must be borne in mind that, though the first preparation is tedious, a large quantity of the material can be made at once, and the actual soldering process is as simple and quick as it well can be.

Flux: One part metallic sodium to 50 or 60 parts mercury. (These combine on being well shaken in a bottle. If this is too much trouble, the sodium amalgam can be bought, ready made, from any chemist or dealer in reagents.)

The sodium amalgam must be kept in a stoppered bottle, closed from the air. It has the property of amalgamating (equivalent to tinning by heat) any metallic surface, cast iron included.

Solder: Make a weak solution of sulphate of copper, about one ounce to one quart of water. Precipitate the copper by rods of zinc; wash the precipitate two or three times with hot water; drain the water off, and add for every three ounces of precipitate six or seven ounces of mercury; add also a little sulphuric acid, to assist the combination of the two metals. When combined, they form a paste which sets intensely hard in a few hours, and this paste should be made, whilst soft, into small pellets.

When wanted for use, heat one or more of the pellets until the mercury oozes out from the surface in small beads; shake or wipe them off, and rub the pellet into a soft paste with a small mortar and pestle, or by any other convenient means, until it is as smooth and soft as painter's white lead. This, when put on a surface previously amalgamated by the sodium and mercury, adheres firmly, and sets perfectly hard in about three hours. The joint can be parted, if necessary, either by a hammer and cold chisel, or by a heat about sufficient to melt plumber's solder.

THE MOTION OF BOMBSHELLS.—At night we can see the path of a shell through all its journey, lighted as it is by the burning fuse. When the range is two miles, the track of a shell from a mortar describes very near half the area of a circle. On leaving the mortar, it gracefully moves on, climbing up and up into the heavens till it is nearly or quite a mile above the earth, and then it glides along for a moment, apparently in a horizontal line; but quickly you see that the little fiery orb is describing the other segment of the circle. A shell from a Parrot rifled gun, in going two and one-half miles, deviates from a straight line not quite as much as a shell from a mortar; but in passing over this space considerable time is required. The report travels much faster than the shot. A shell from a mortar will make a distance of two miles in about 30 seconds, and from a Parrot gun in about half that time. The flash of a gun at night, and the white smoke by day, indicate the moment of the discharge, and 15 or 20 seconds give an abundance of time to find a cover in a splinter proof, behind a trench, or something else.

GLYCERINE AND GLUE.—A German chemist named Pusher, a native of Nuremberg, reported to the trades union of that place, that he met with great success in using glycerine together with glue. While generally, after the drying of the glue, the thing to which it is applied is liable to break, tear or spring off, if a quantity of glycerine equal to a quarter of the quantity of glue be mixed together, that defect will entirely disappear. Pusher also made use of this glue for lining leather, making globe frames, and for smoothing parchment and chalk paper. He also used it for polishing, mixing wax with the glycerine, and using it as an underground for laying on aniline red color. The red was found to exceed all others in which glycerine is not used. The glycerine has also some properties in common with india-rubber, for it will blot out pencil marks from paper, so as to leave no mark whatever. A paste made of starch, glycerine and gypsum will maintain its plasticity and adhesiveness longer than any other cement, and does, therefore, recommend itself for cementing chemical instruments and apparatus used by pharmacists.

LEMON JUICE.—Prof. Schmale, an eminent pathologist in Bonn, Germany, recommends persons who wish to live to old age to swallow the juice of from six to eight lemons daily. The citric acid, he thinks, will dissolve and carry off the surplus of food and decaying matter quickly, and preserve health almost indefinitely. One man who tried it lived to be 110 years old. Who will follow his example?

NO LEAD OR ZINC IN ANCIENT BRONZES.—From analyses made by M. E. Reyer, it seems that the bronzes used for weapons by the ancients contained no lead or zinc, but were alloys of copper and tin with small quantities of nickel, iron, phosphorus and occasionally cobalt.

AN Antarctic expedition to Cape Horn is being fitted out by the French government. It will be furnished supplies for 18 months.

San Francisco Lodge Locals.

Recorders are invited to correspond. Lodges may also find suitable reading here for "good of the Order."

Unity, 27.

Here, on Tuesday evening, Aug. 15th, we found about 40 brothers, up to their ears in business; here discussion is quite spirited and interesting, and often protracted; here questions of mighty moment are coming up ever and anon of late, and meetings run into the "wee sma' hours." This Lodge confers degrees on the 1st and 4th Tuesdays, averaging six candidates per month.

Valley, 30.

At the meeting of Tuesday evening, August 23d, we had the pleasure of witnessing the working of the "Old Mastodon," from beginning to close, and can confidently say that it does its work in a graceful and dignified manner, and as well as the best. Besides having a good-looking set of officers, Valley always has a good attendance of members, which is due very probably to the fact that this Lodge has now about 900. We could not but imagine what a rousing meeting, what confusion, embarrassment, crowd, work and suffocation would result if all these members should take it into their heads to attend Lodge some evening. On this evening we noted over 60 present, and as fine a representative body of men as is to be found in any of our Lodges. Two candidates received the M. W. degree, and four were admitted to membership. Among visiting brethren present we noticed the Visiting Committee of Spartan Lodge, including I. E. Alexander, M. W., and A. W. Prevost, P. M. W. Under the head of Good of the Order, Bro. Alexander made a few remarks, and also several others, including the brother who is compared to the River Rhine. The promptness with which business is dispatched by Valley Lodge is only exceeded by the gracefulness of her Recorder, when seating himself comfortably after making a flourishing motion.

Spartan, 36.
